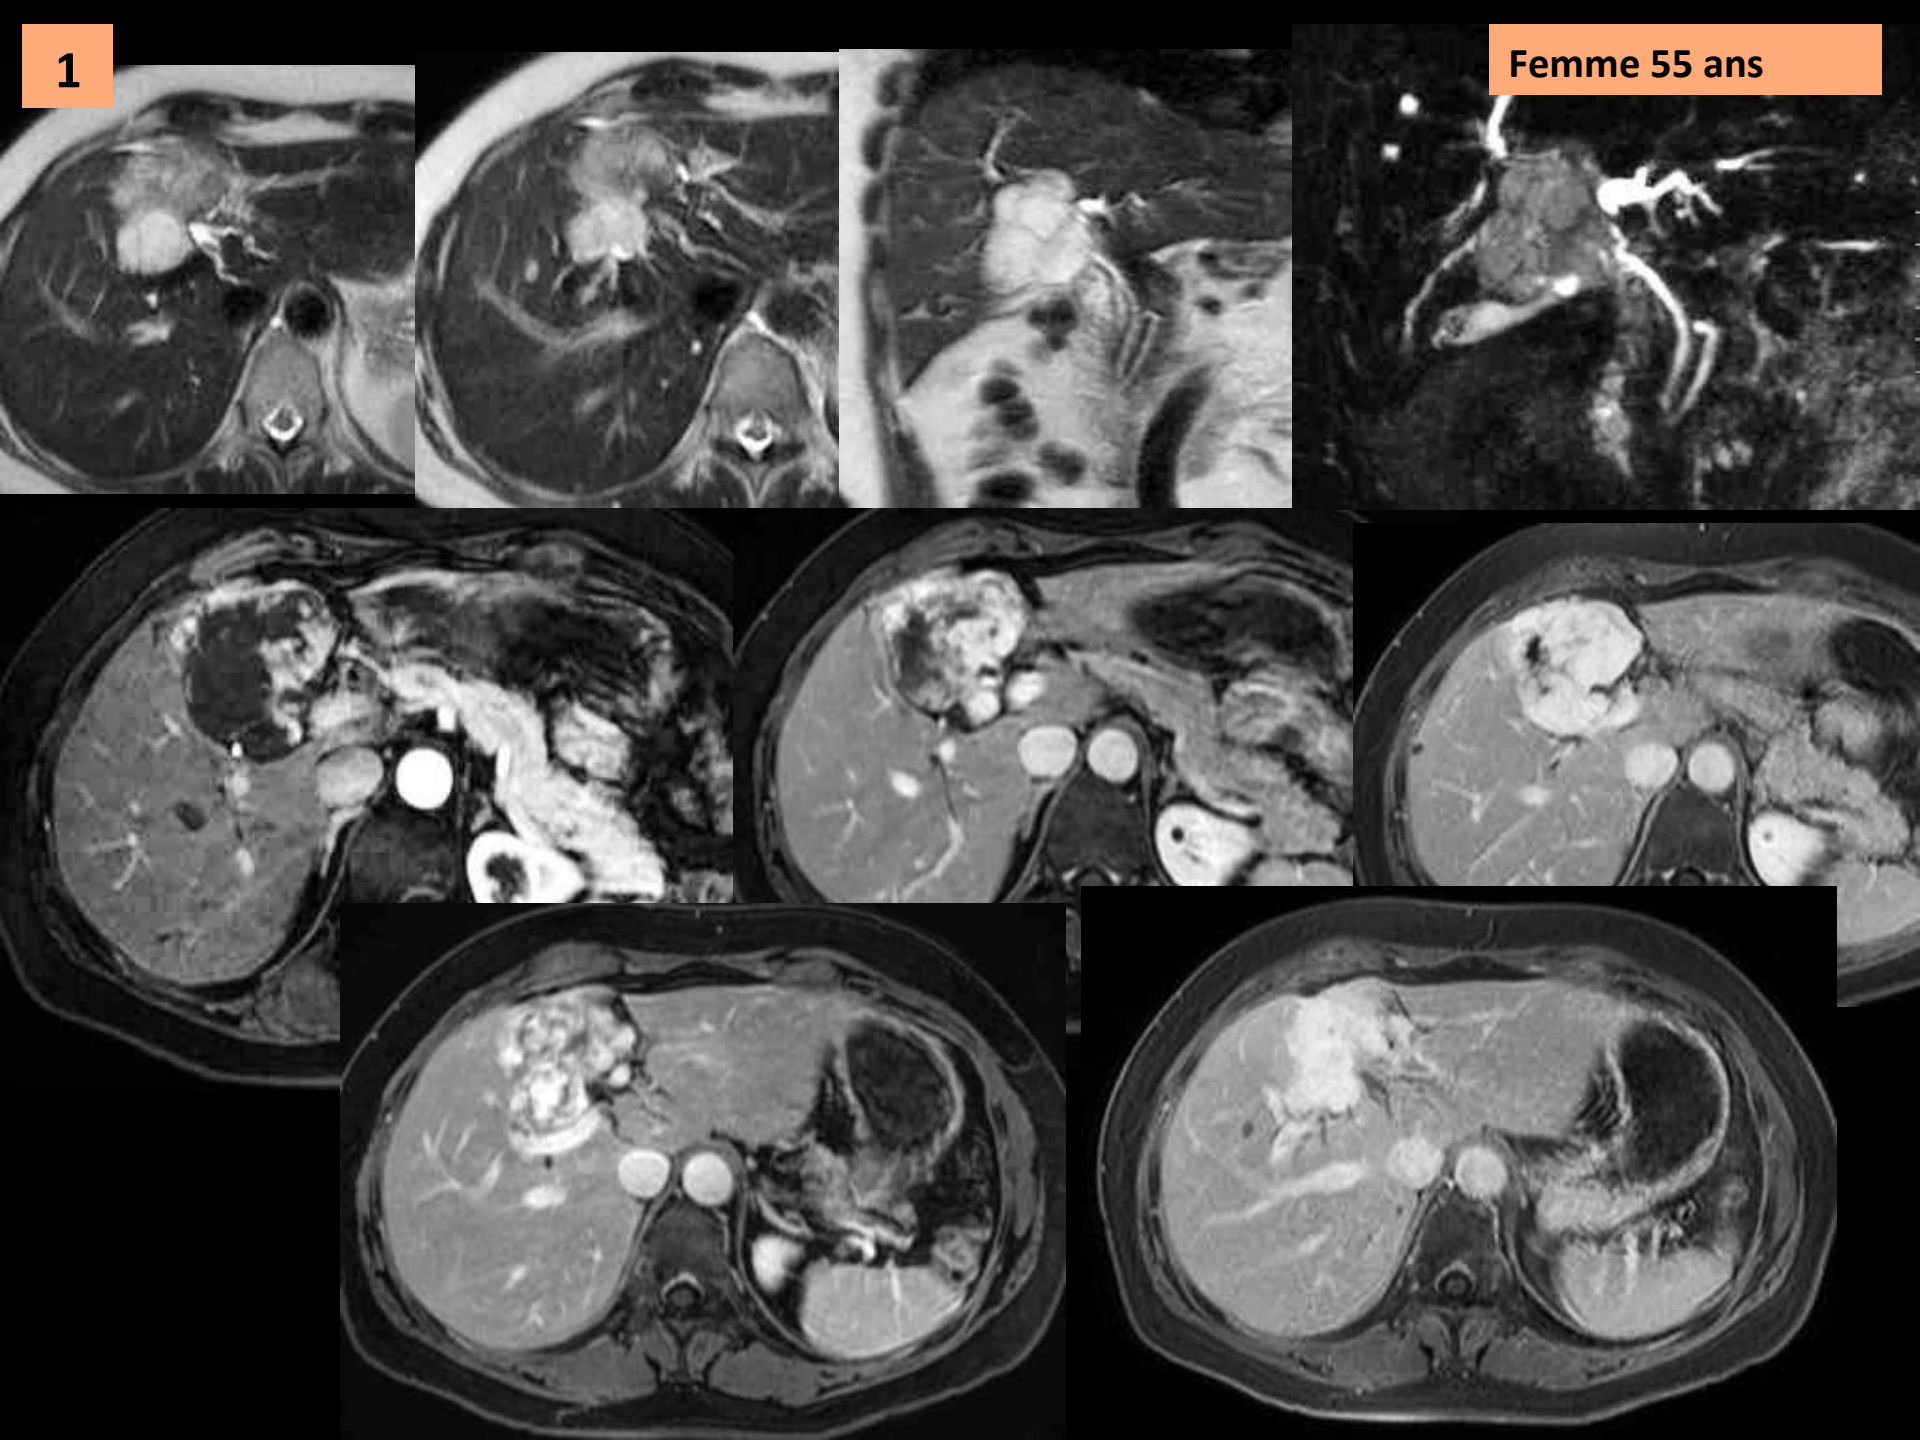
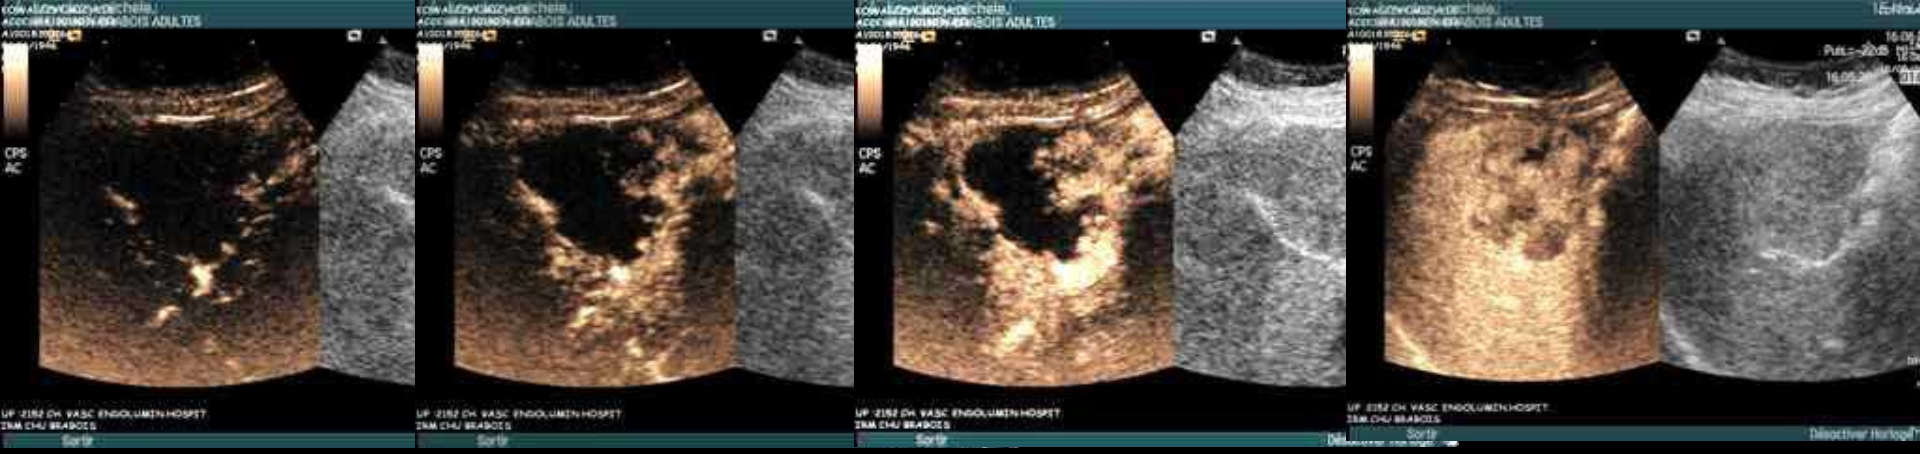
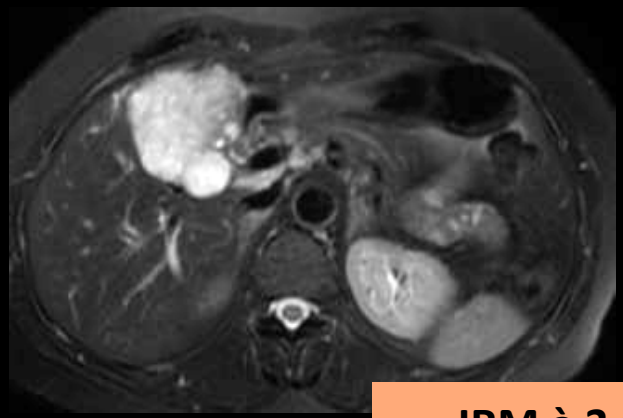
Teaching File

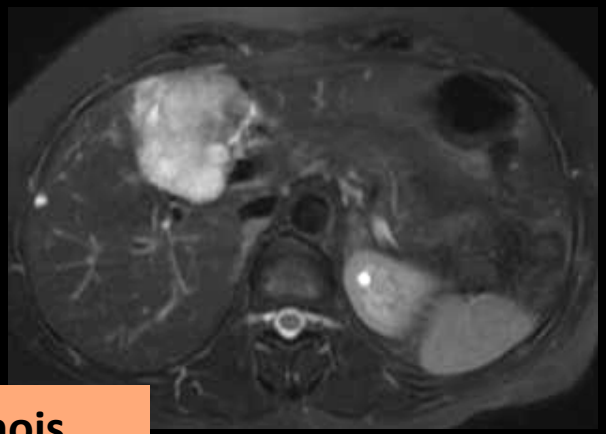
FOIE niveau D



1
Femme 55 ans

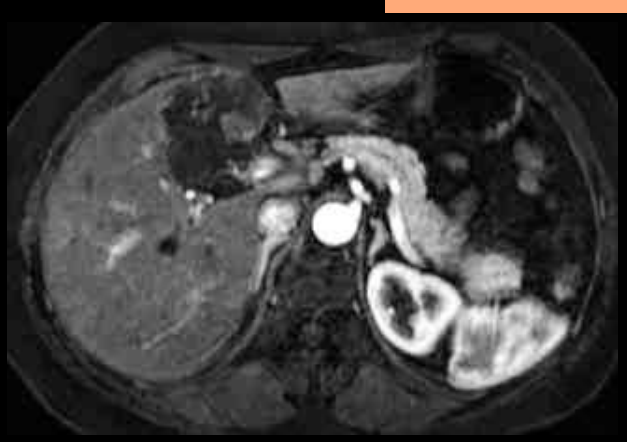


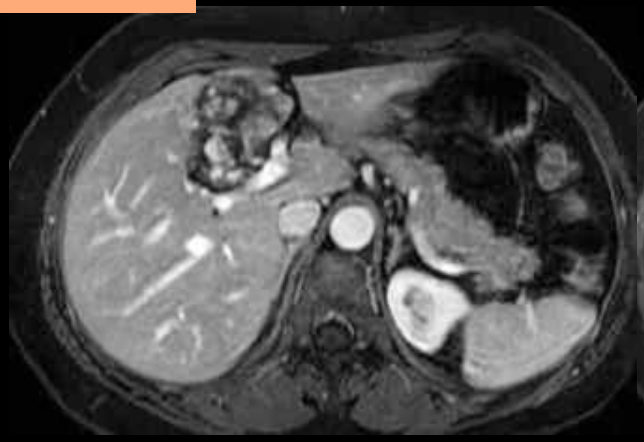


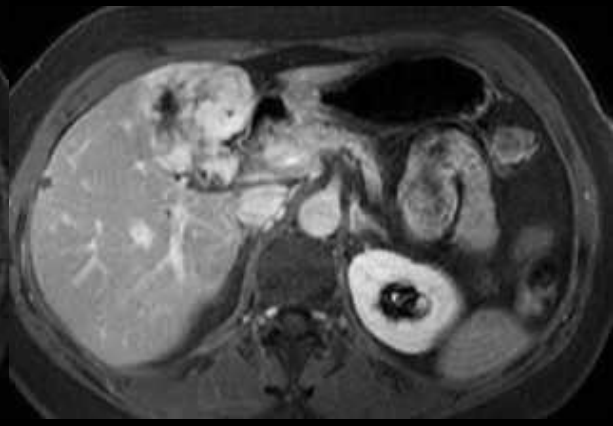


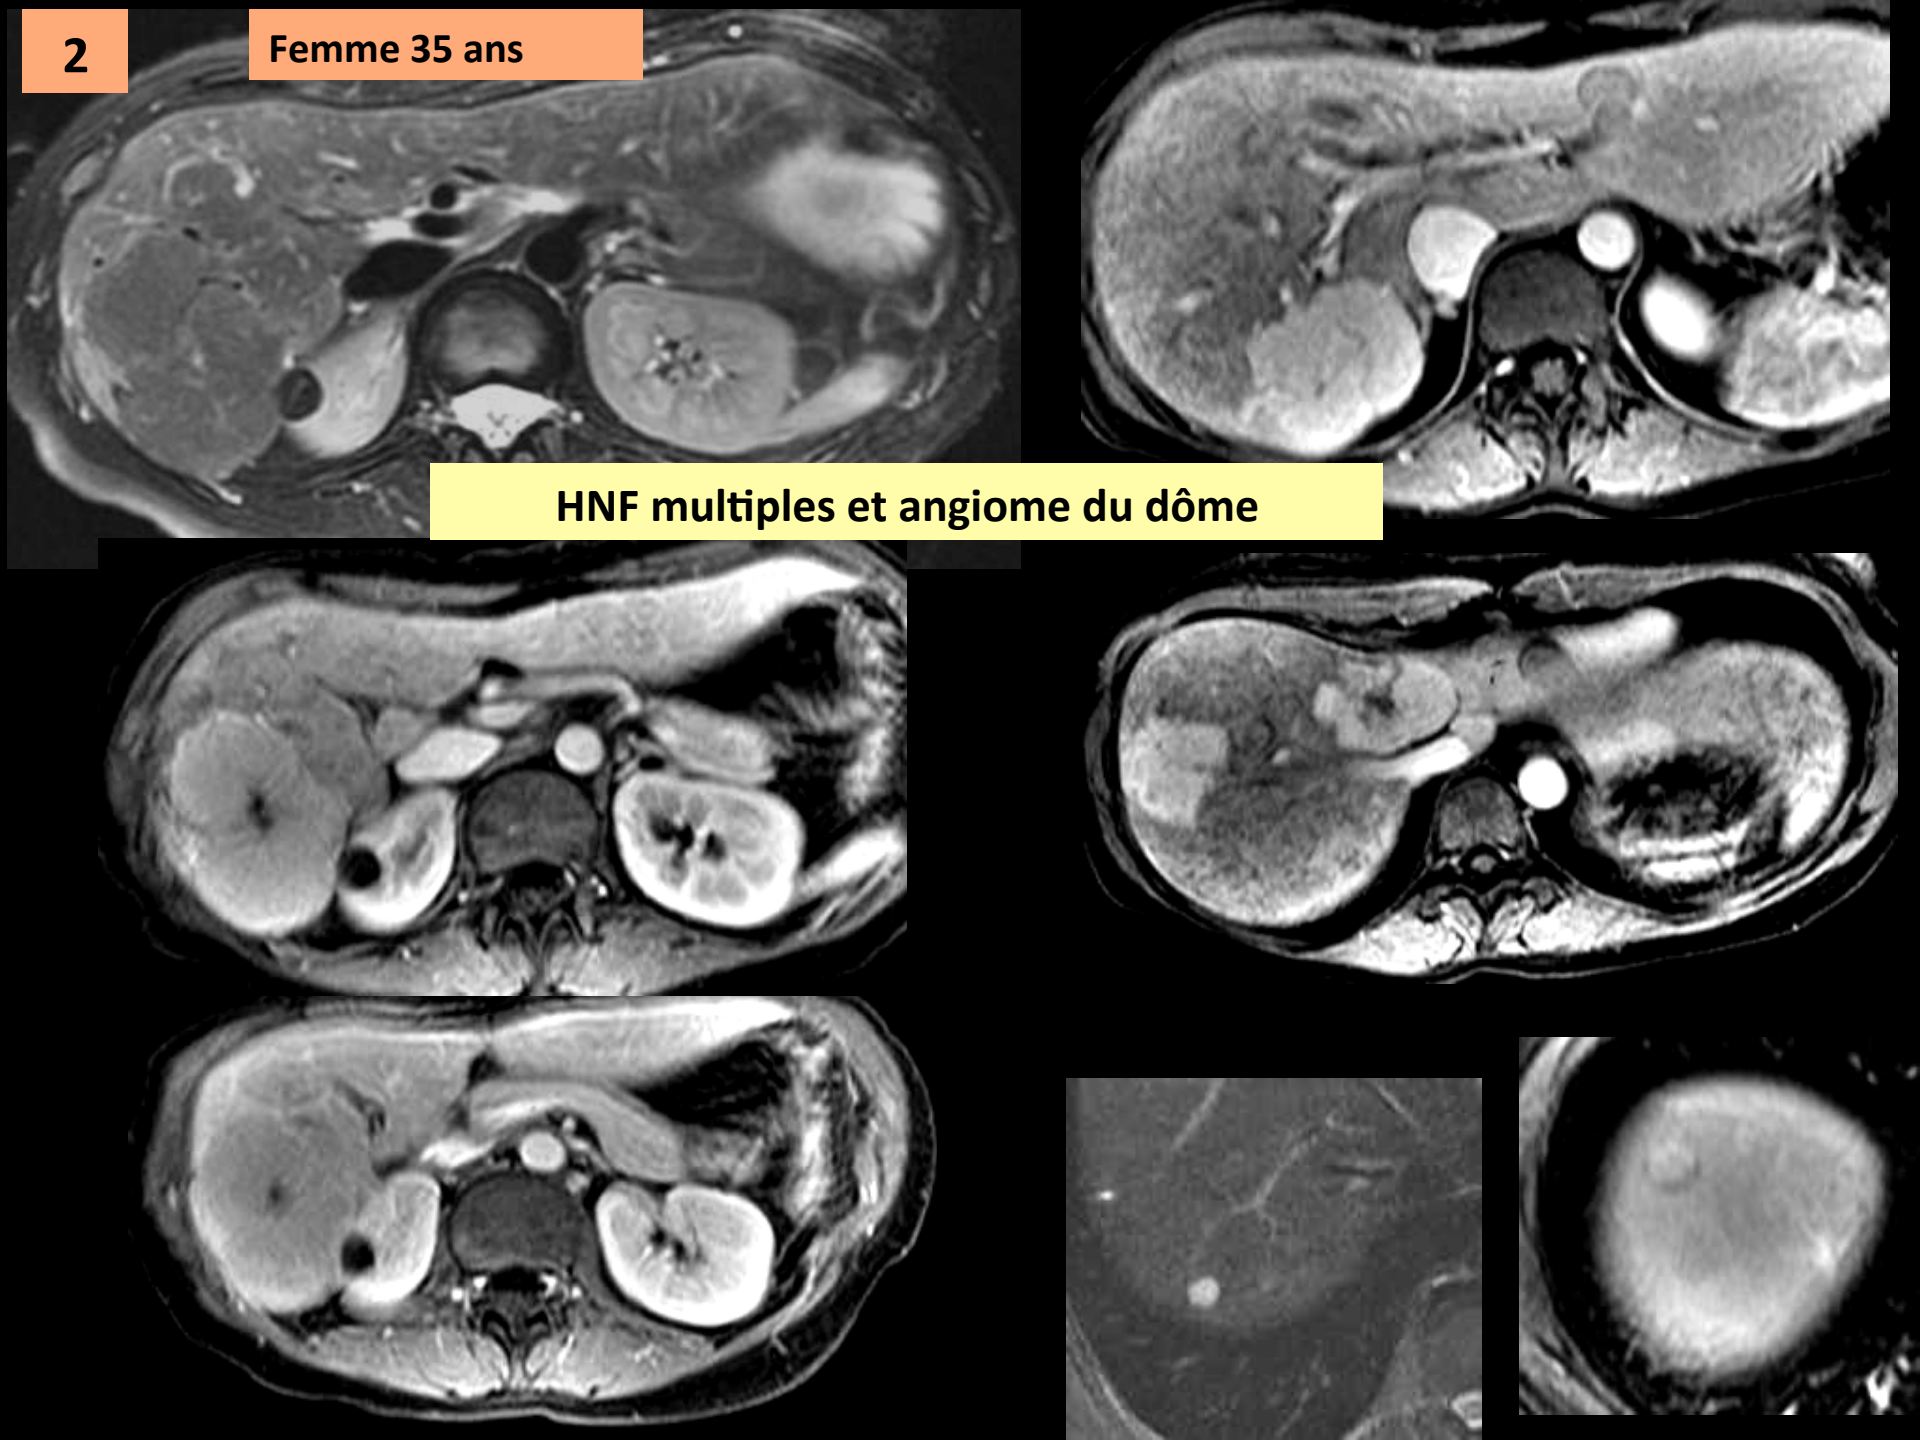
IRM à 3 mois

hémangiome



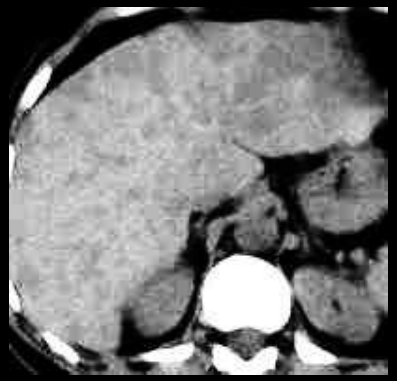






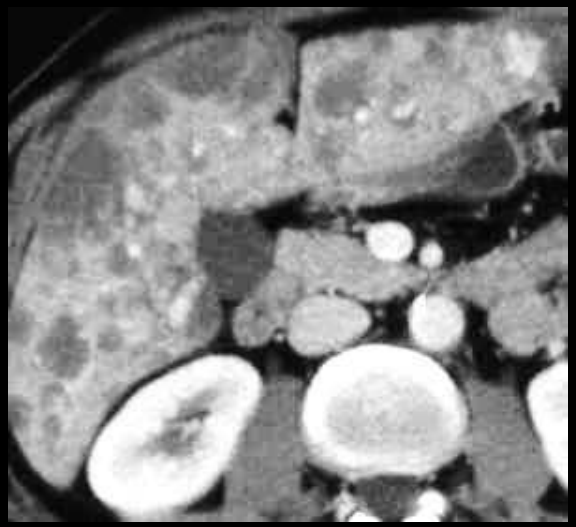
2
Femme 35 ans
HNF multiples et angiome du dôme

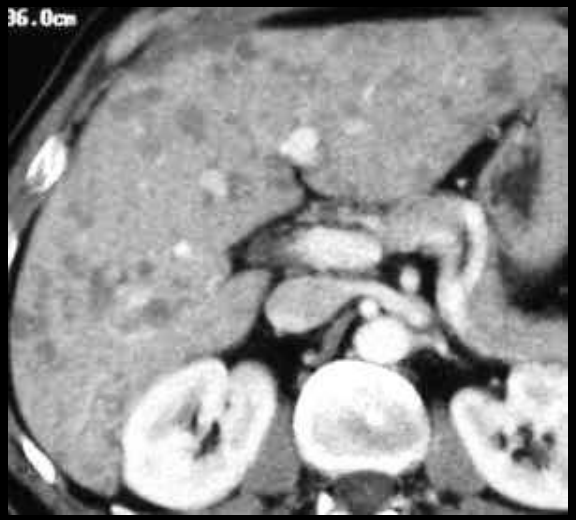
3

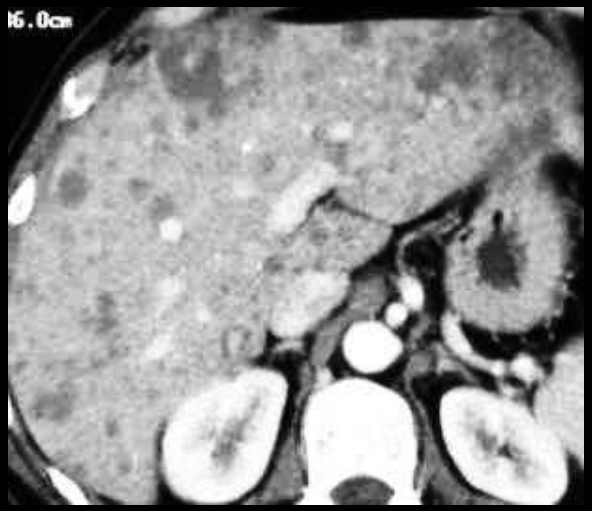


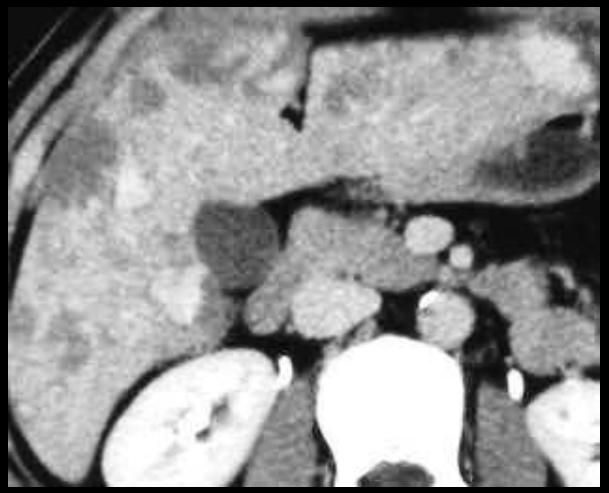
Homme, 50 ans

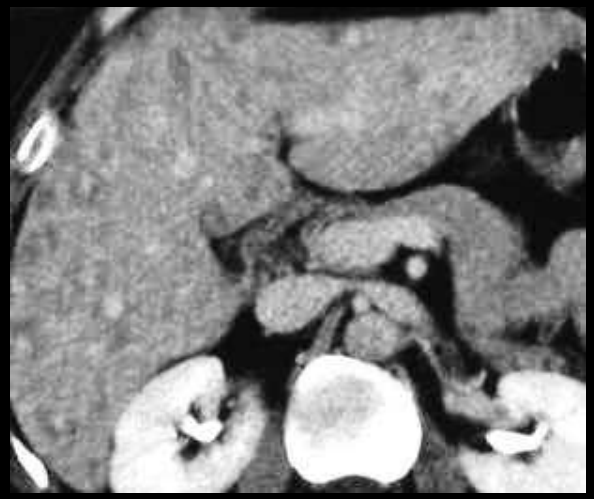
- Douleurs épigastriques
- Pas d'antécédent
- Echo. Abdo : découverte de nodules disséminés

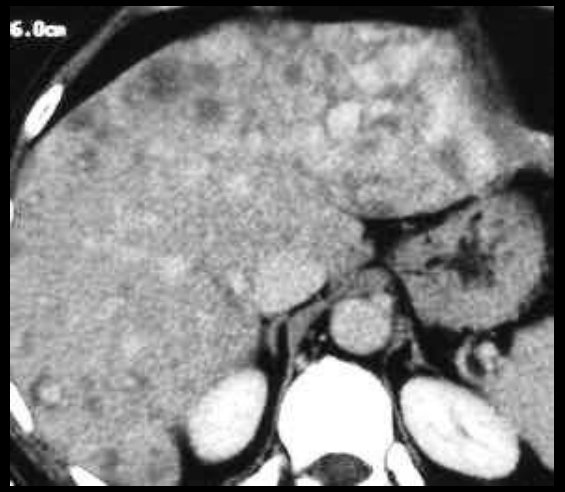


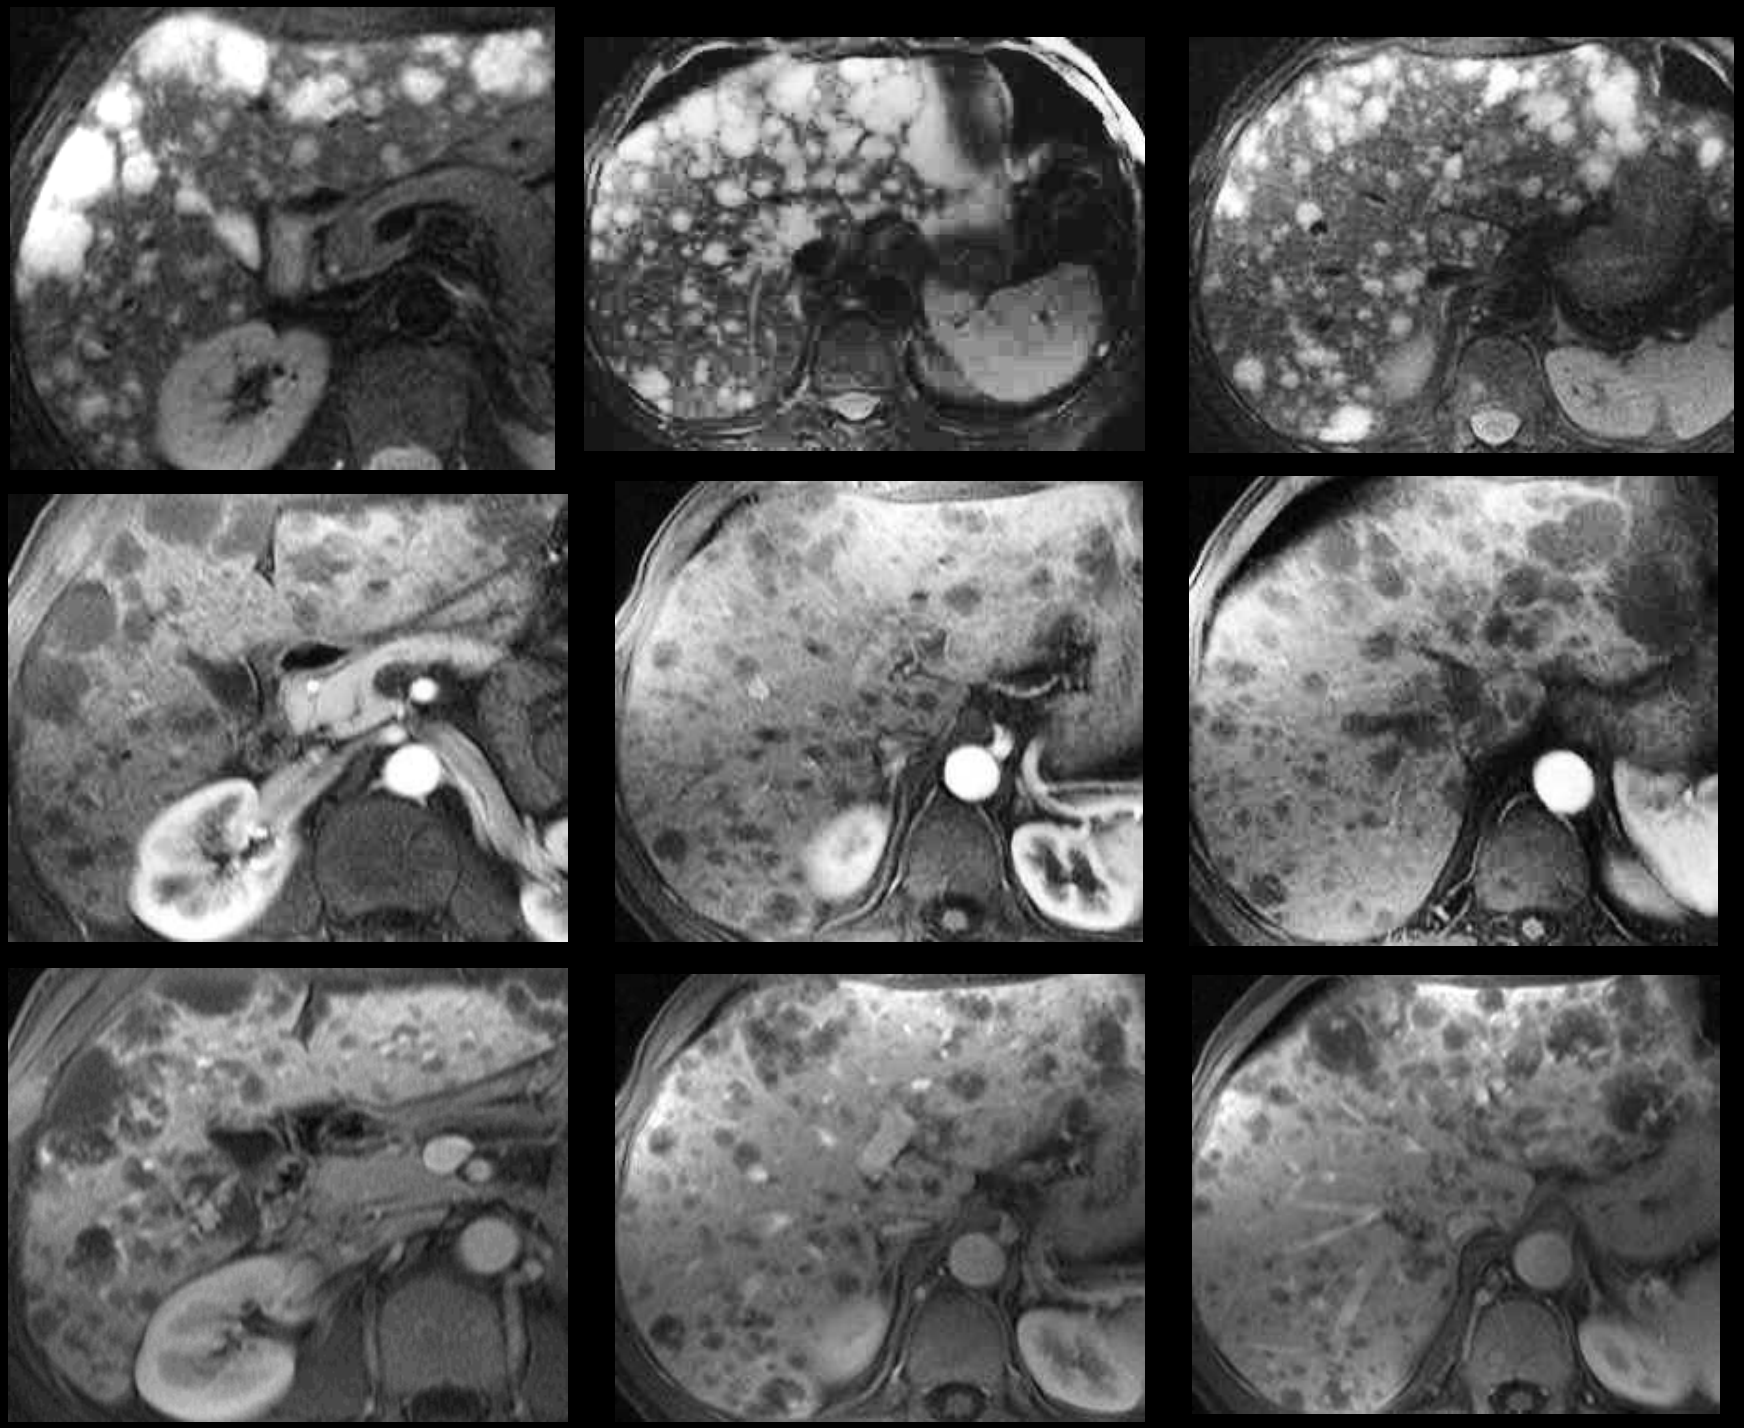


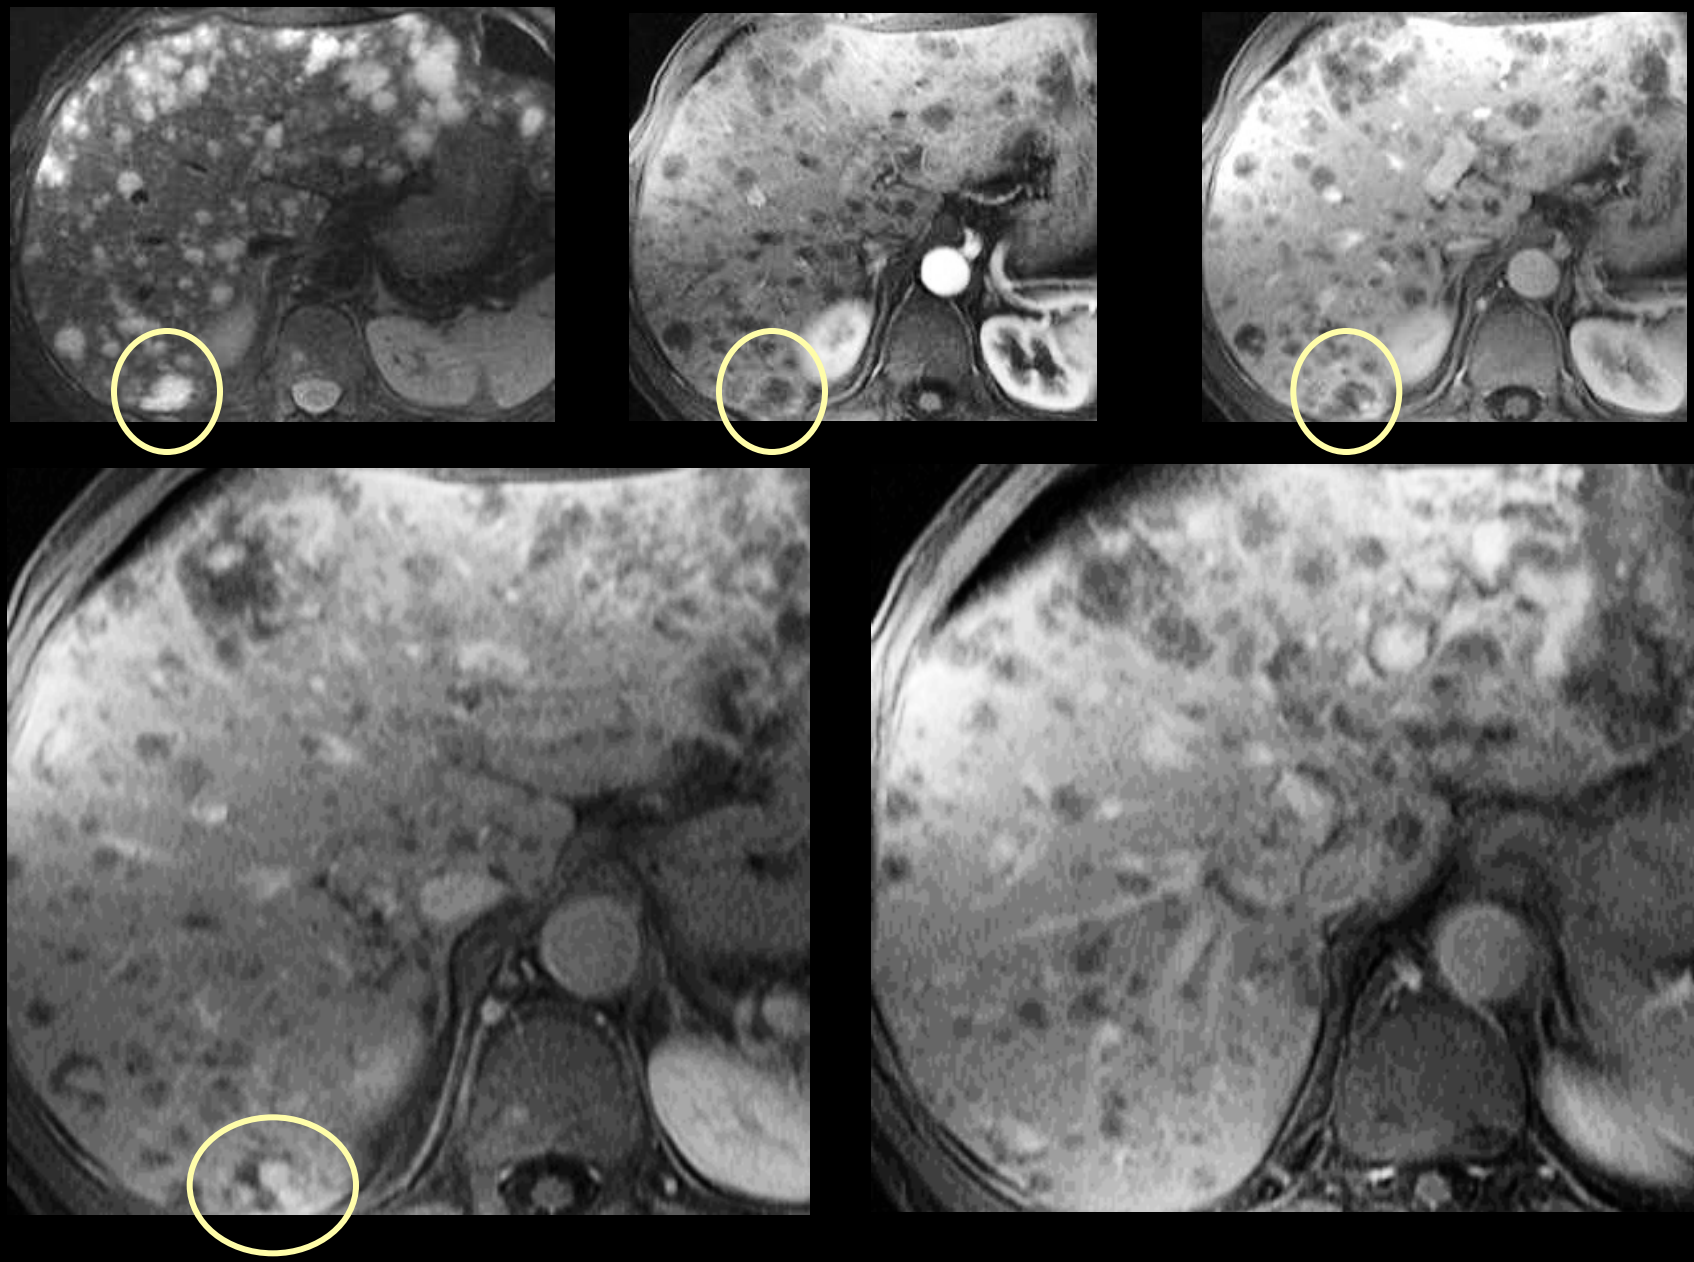












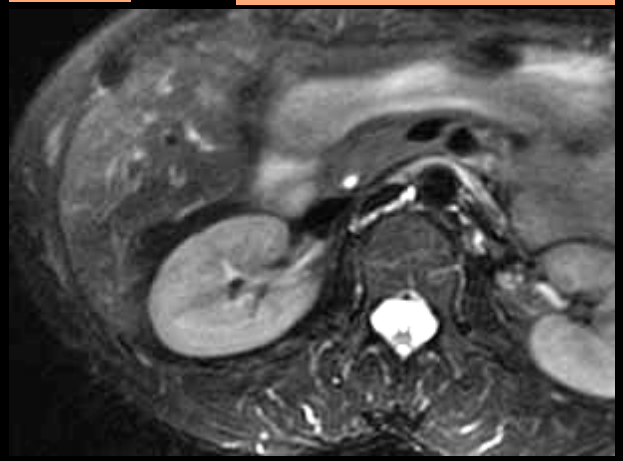
Ax T1 gado tardives

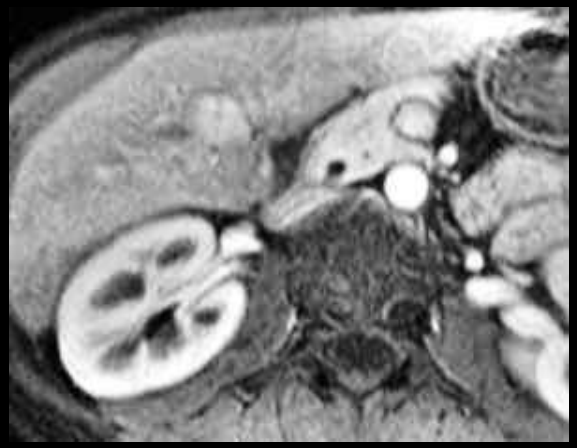
Hémangiomatose

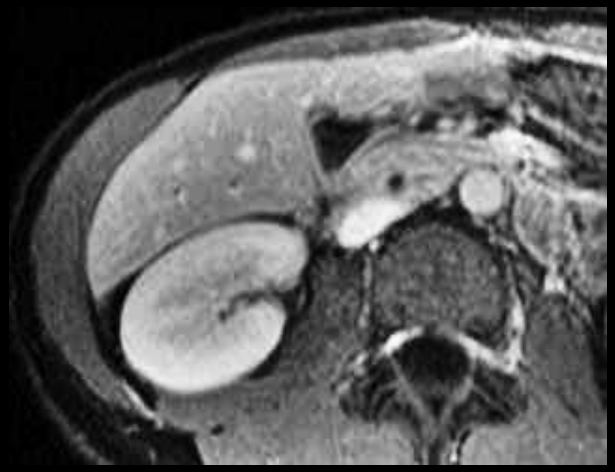
4

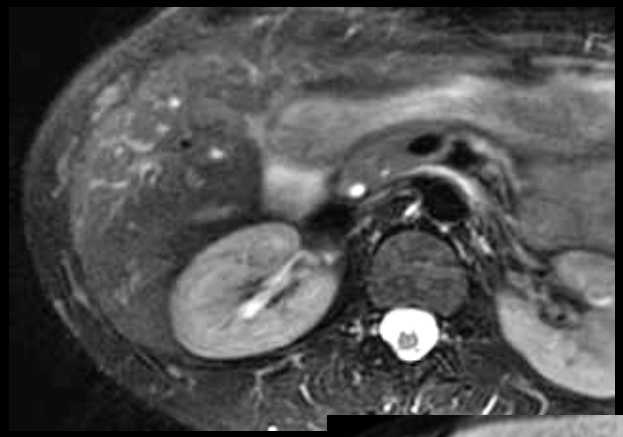
Femme, 40 ans

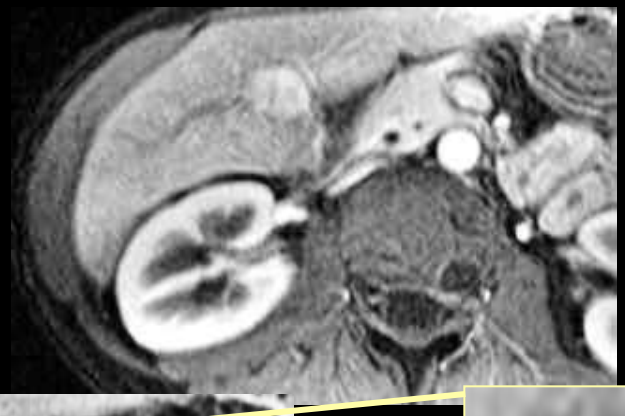
HNF

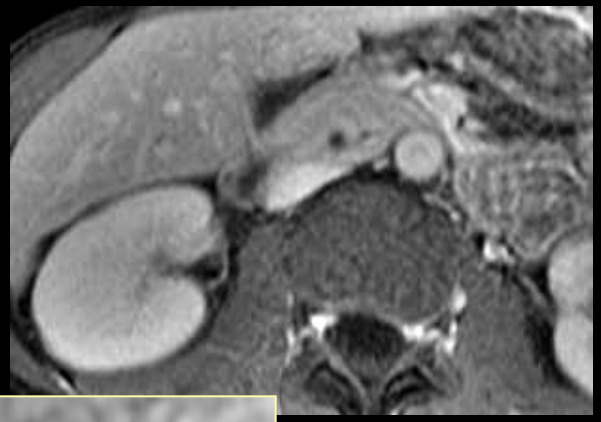


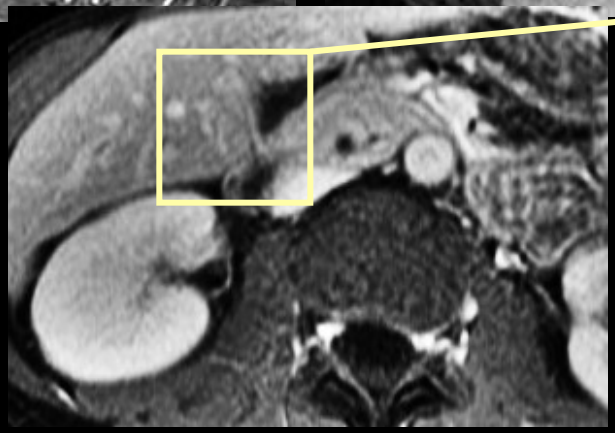


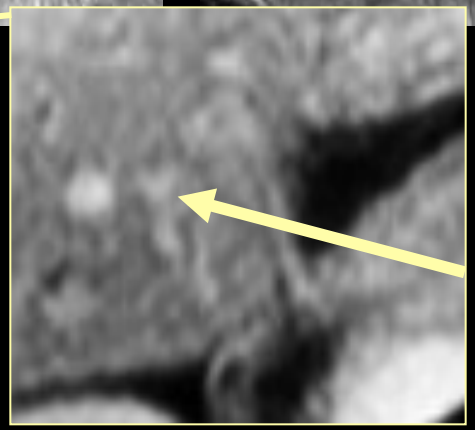








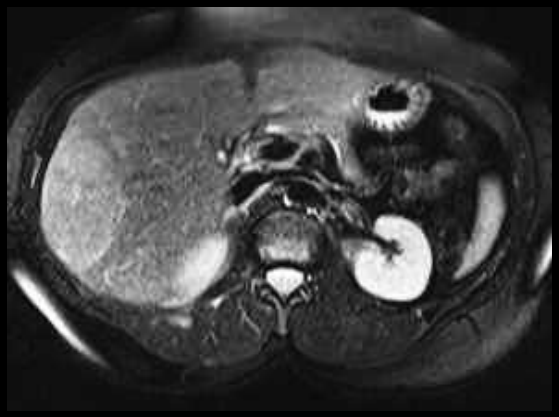


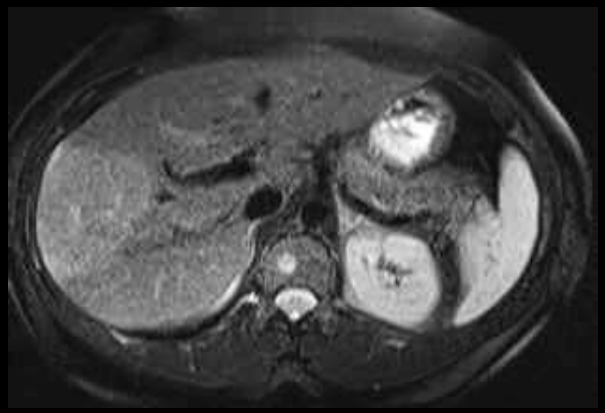


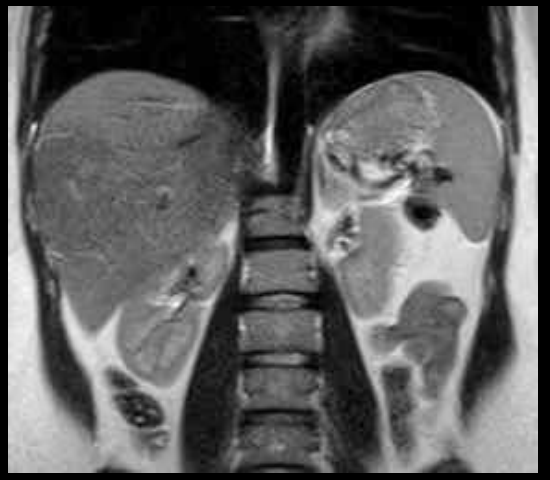
5

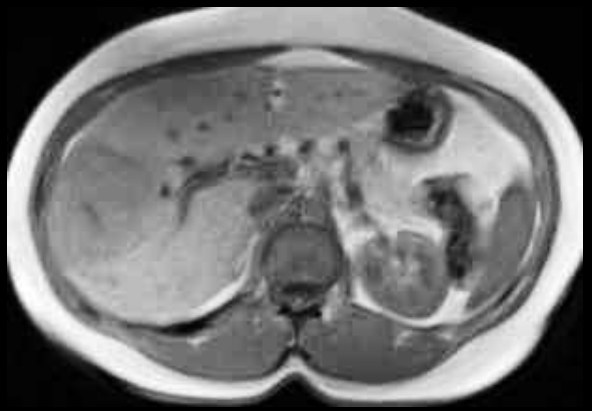
femme, 30 ans

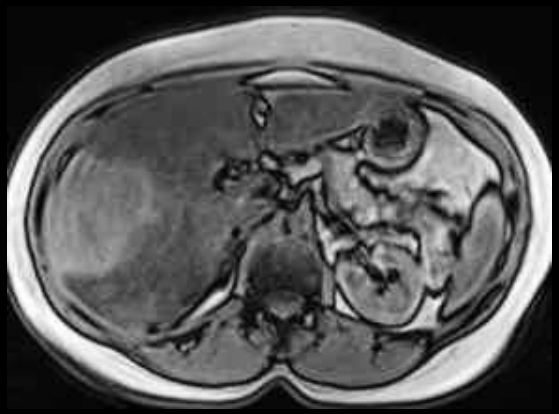
HNF

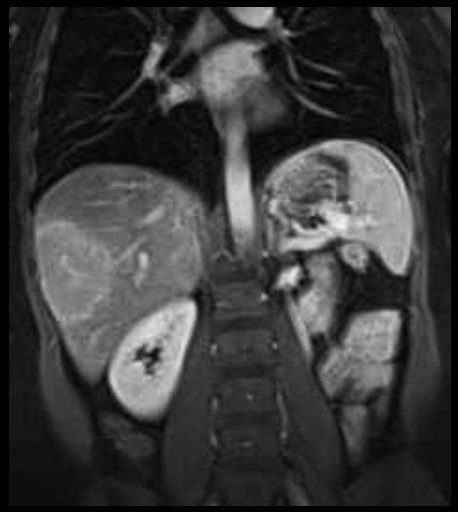


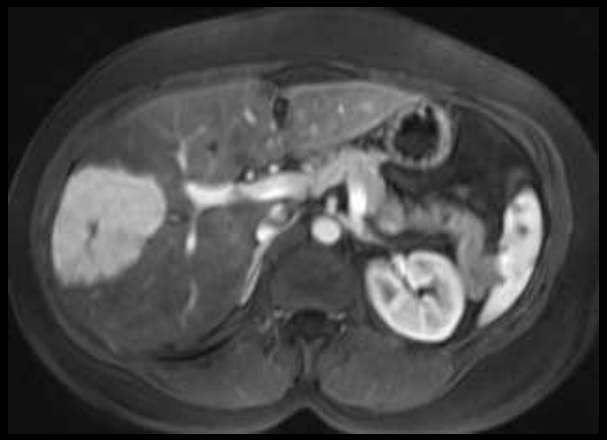


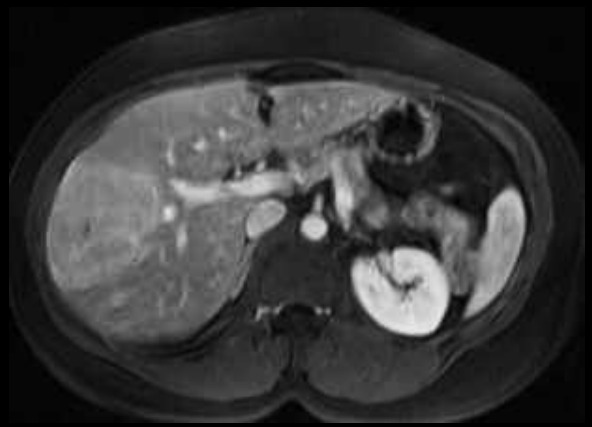


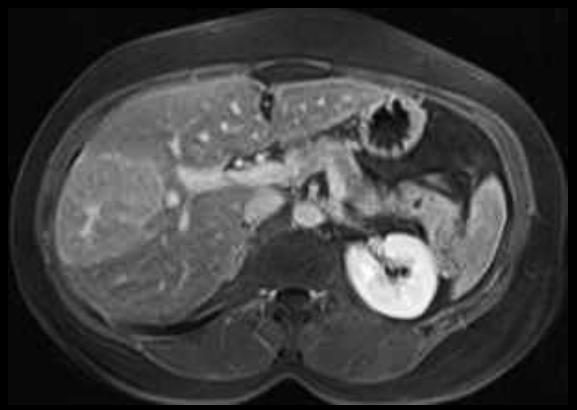






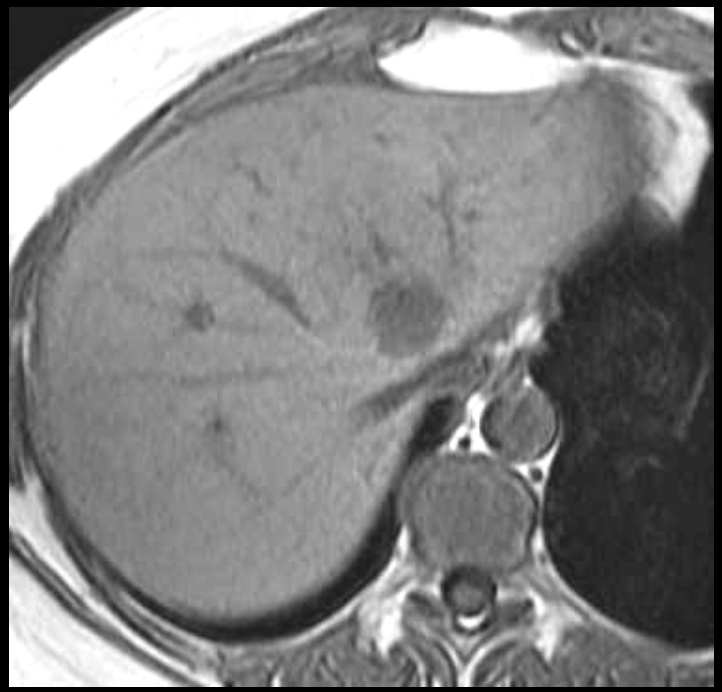


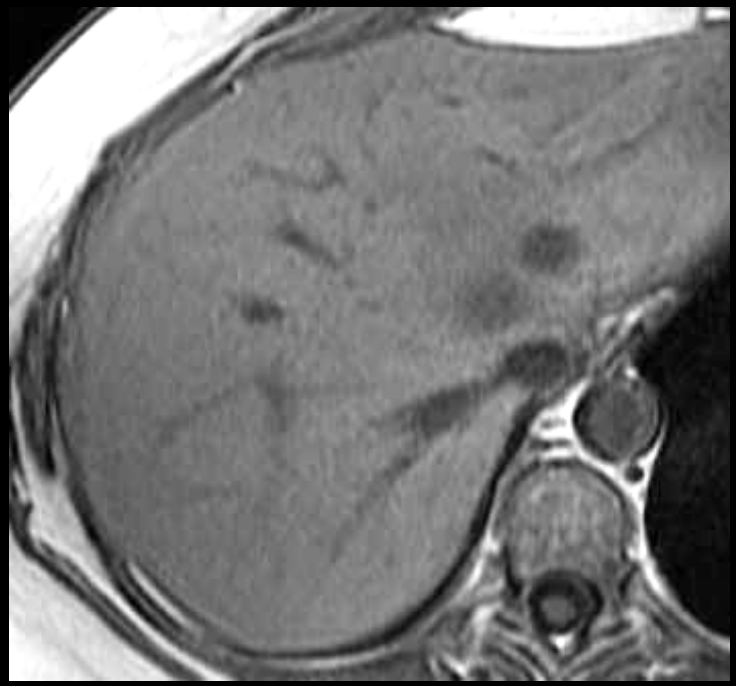


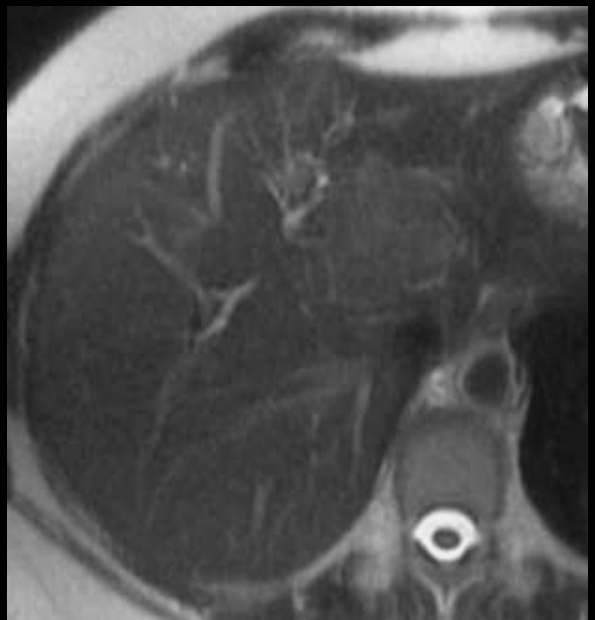


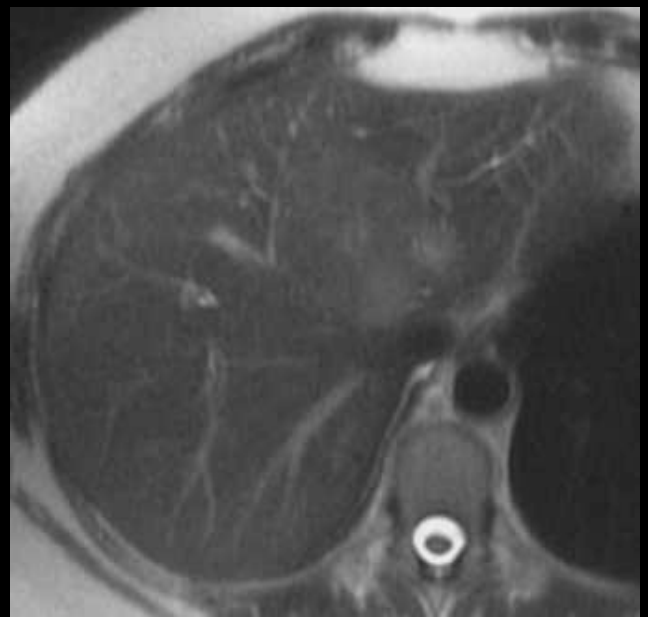
6

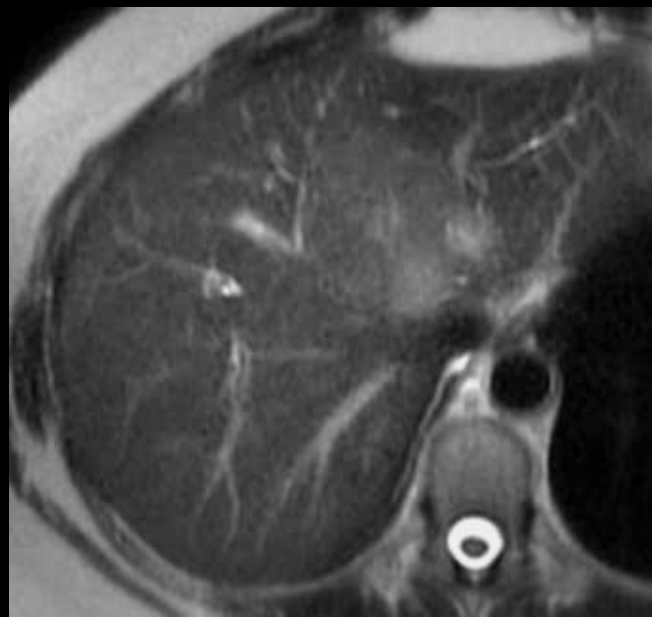
femme, 65 ans

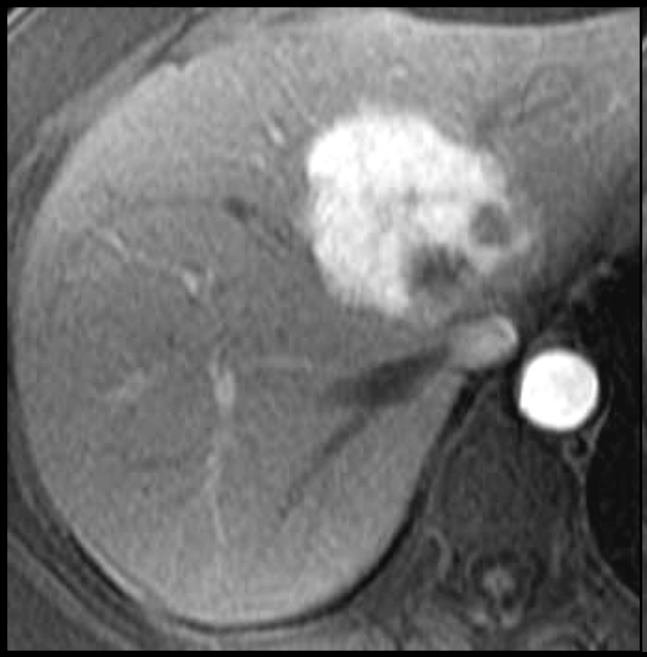


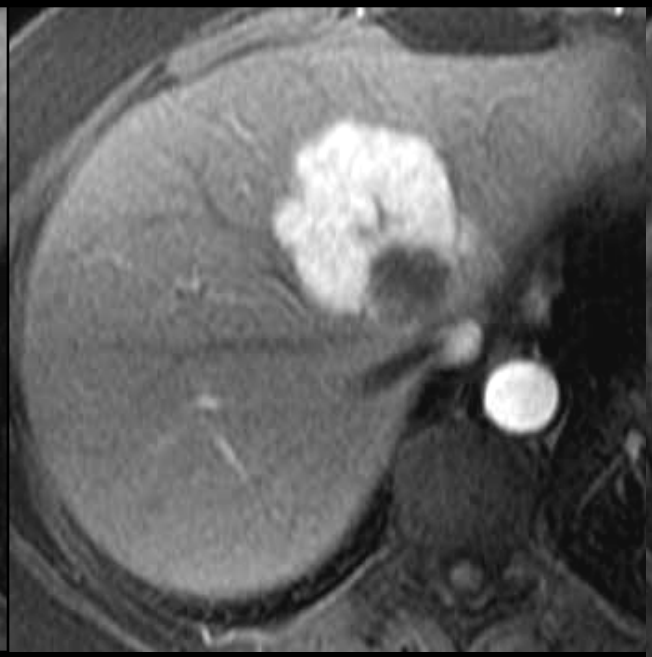


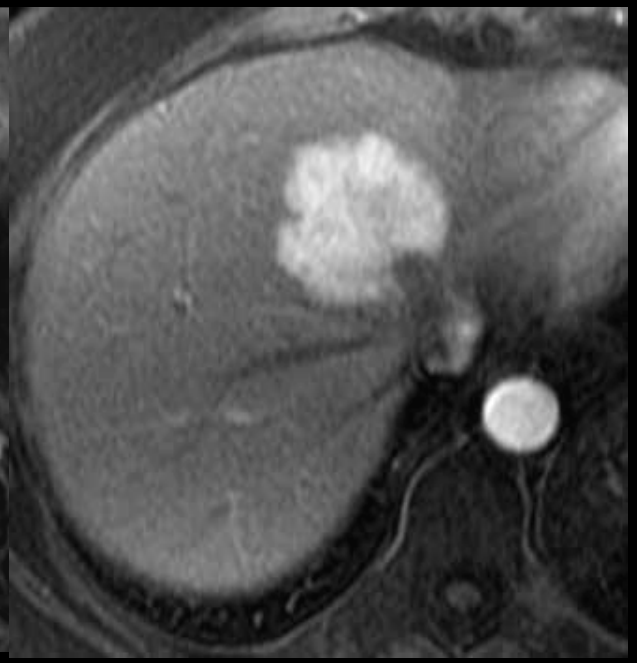


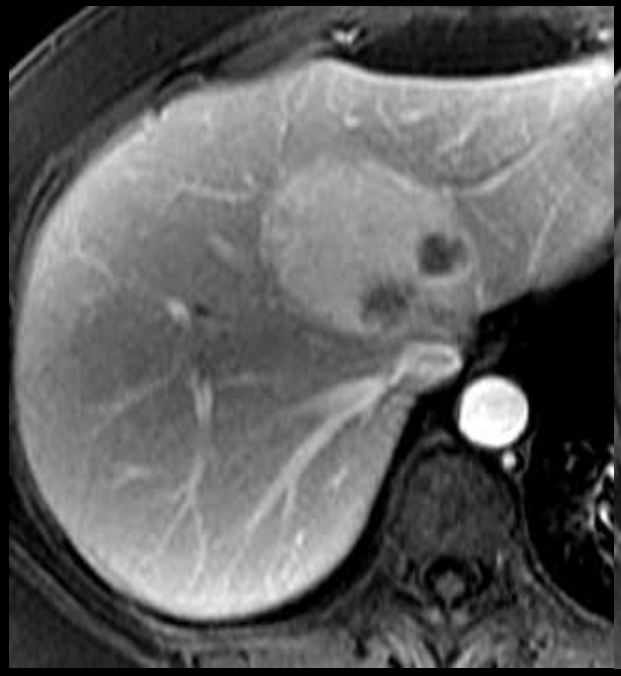


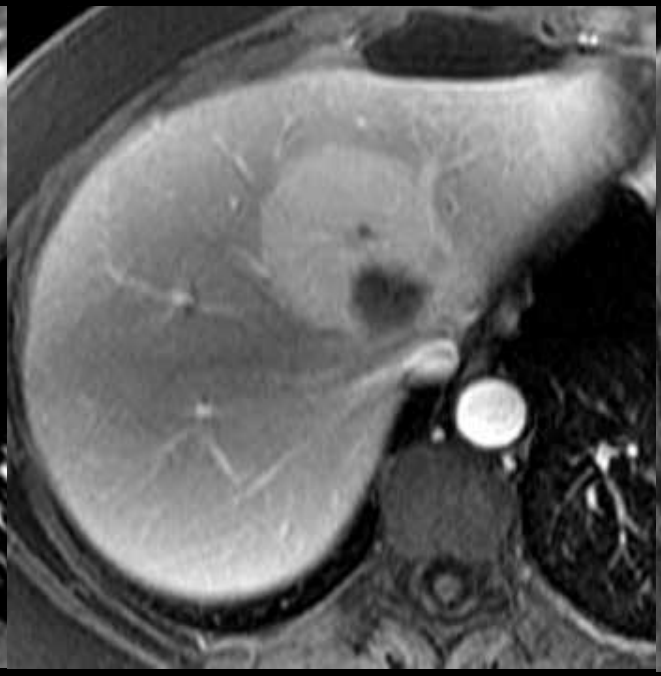


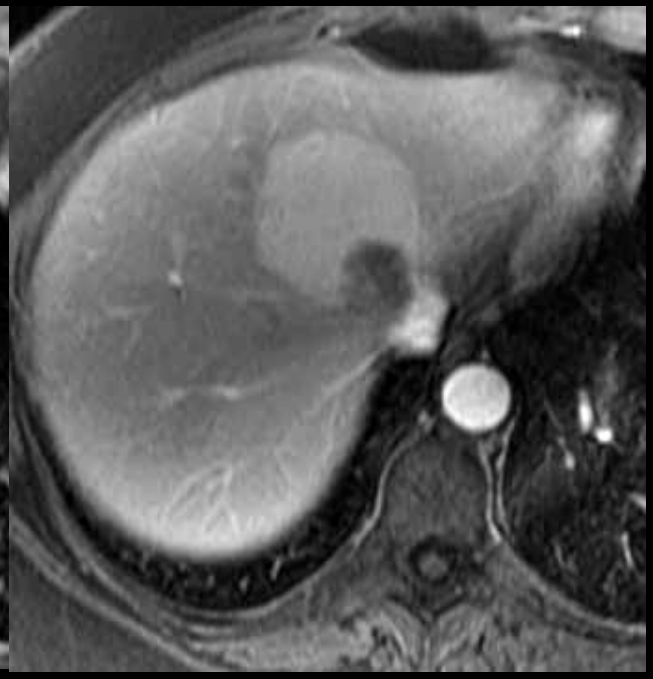


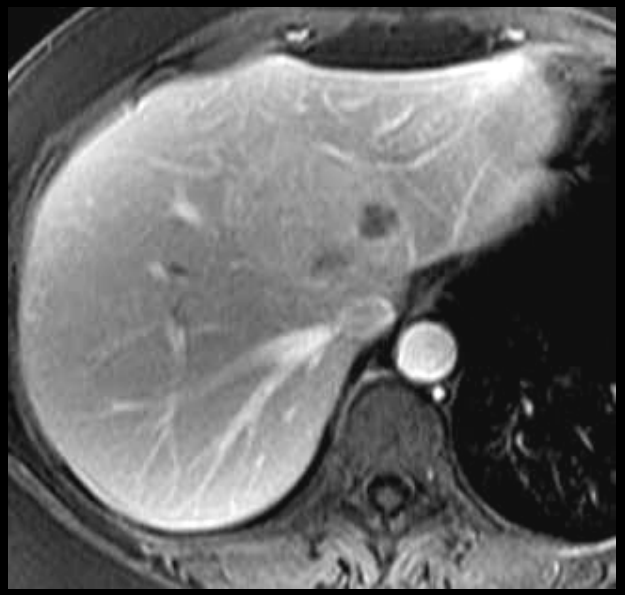


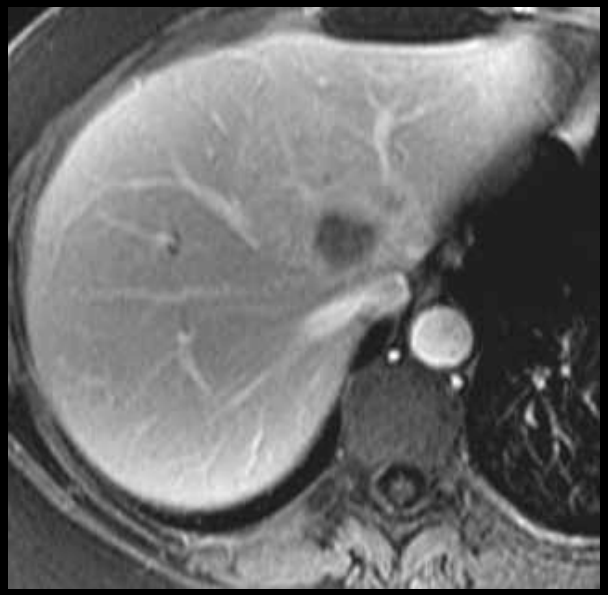


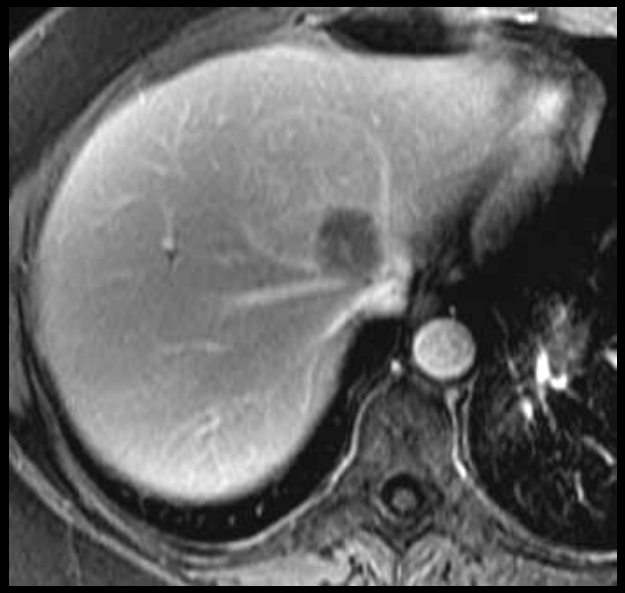


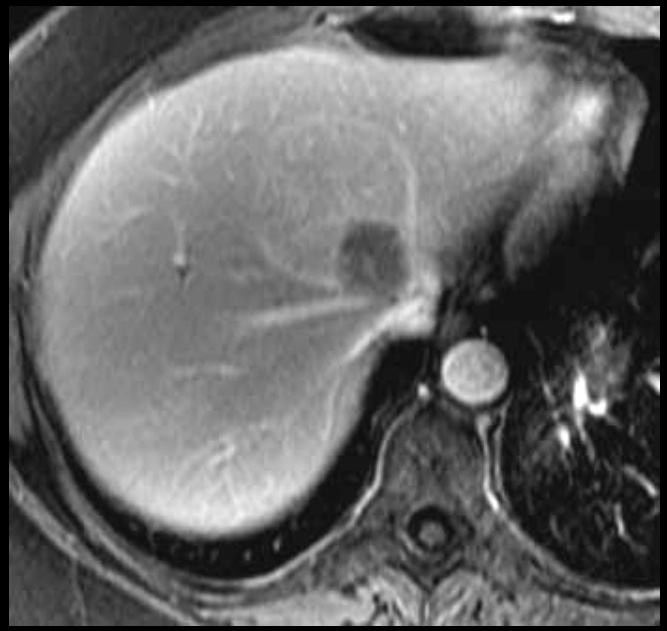












Patiente fumeuse

Radio thorax : opacité suspecte apicale

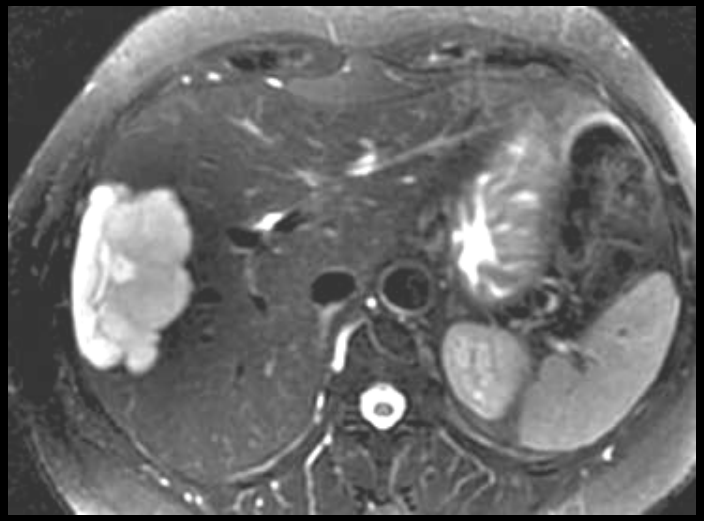
HNF

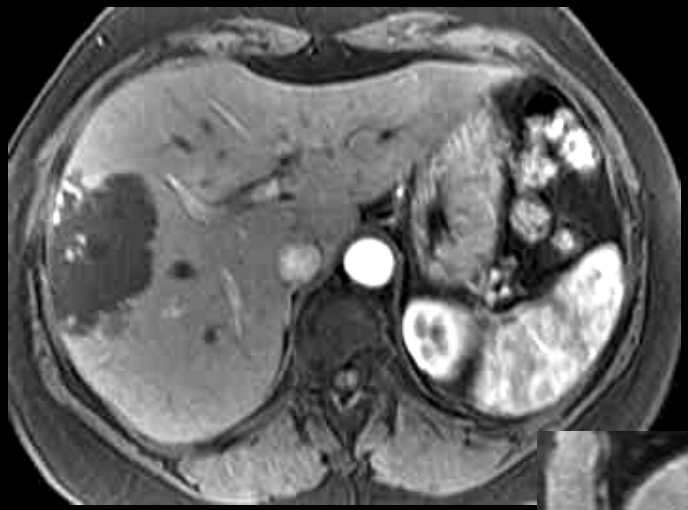
Et

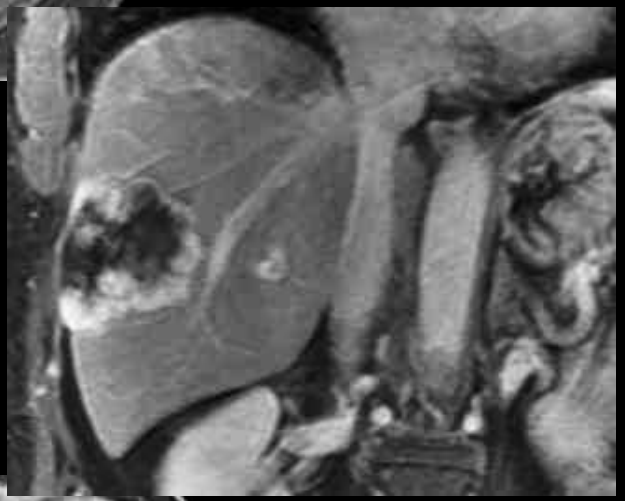
métastases

7

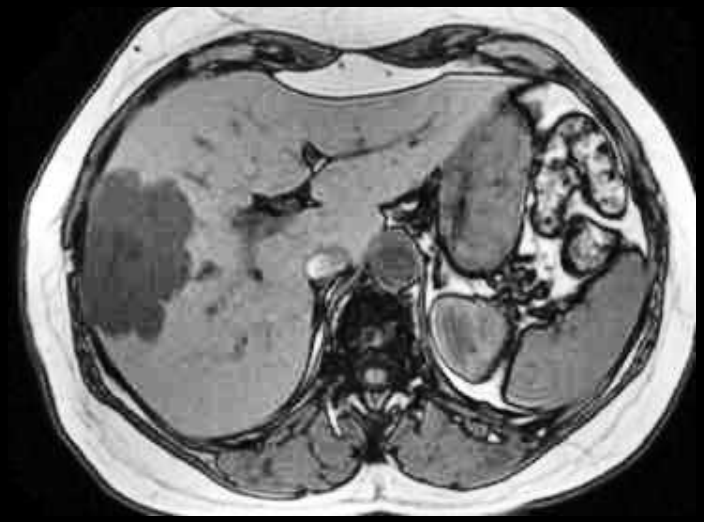
femme, 35 ans

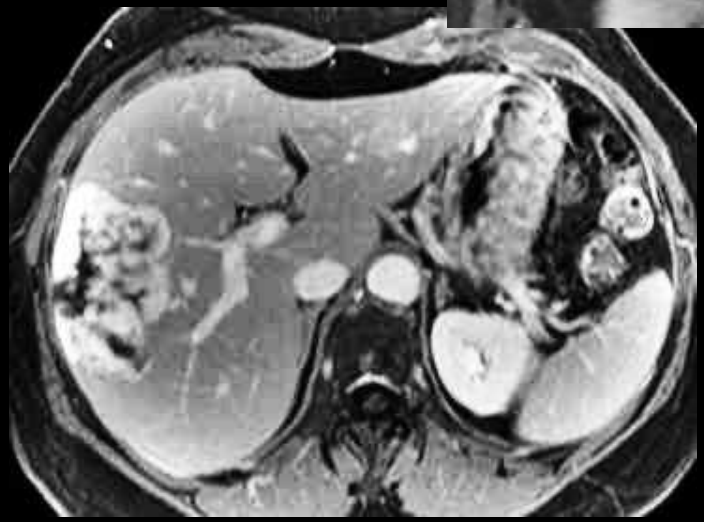






Hémangiome

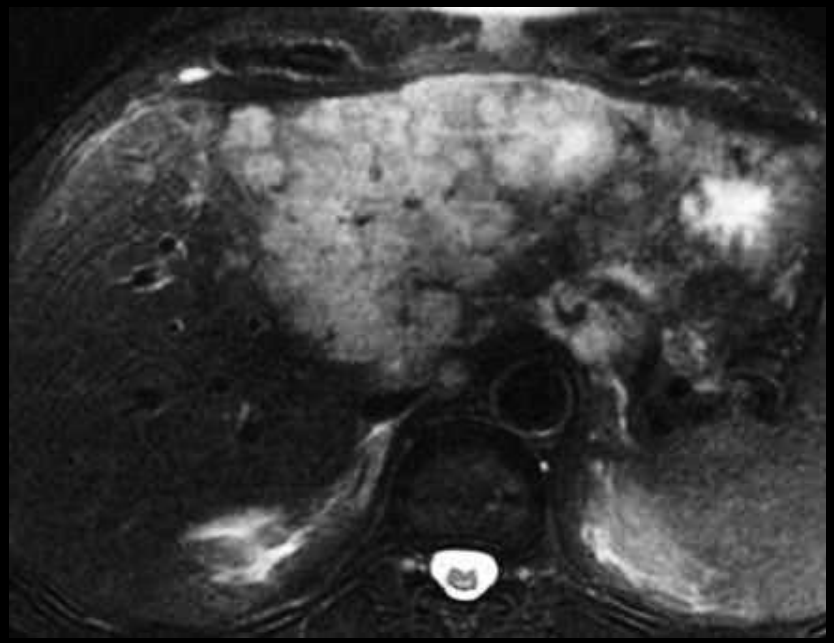


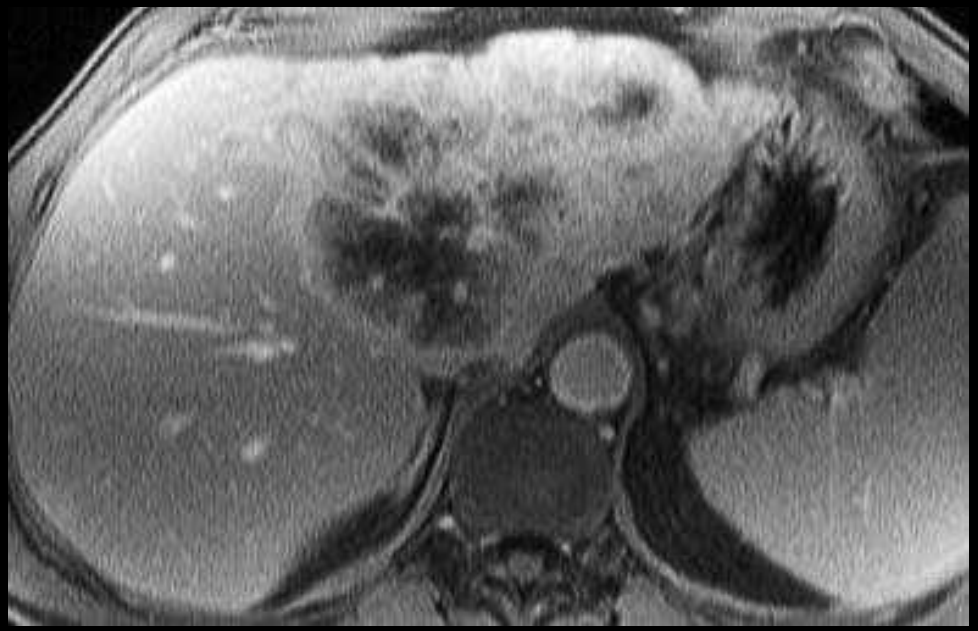


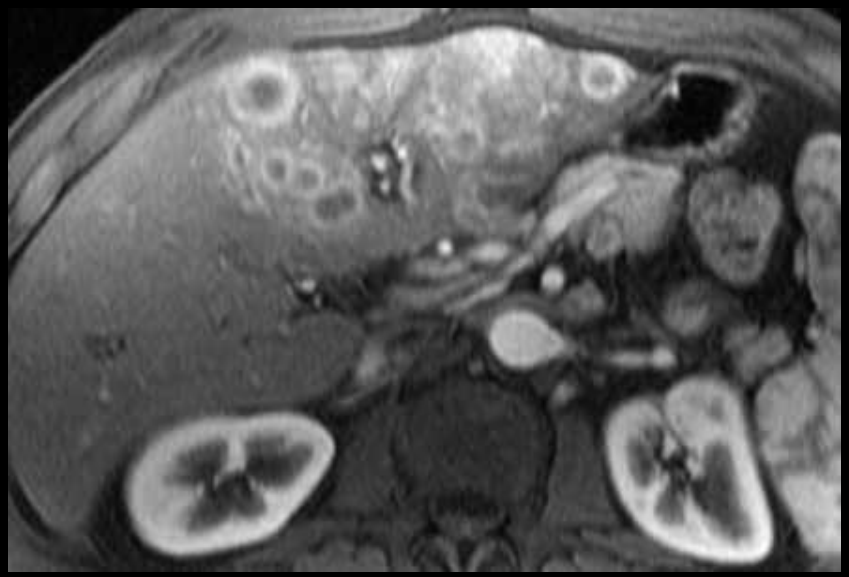
8

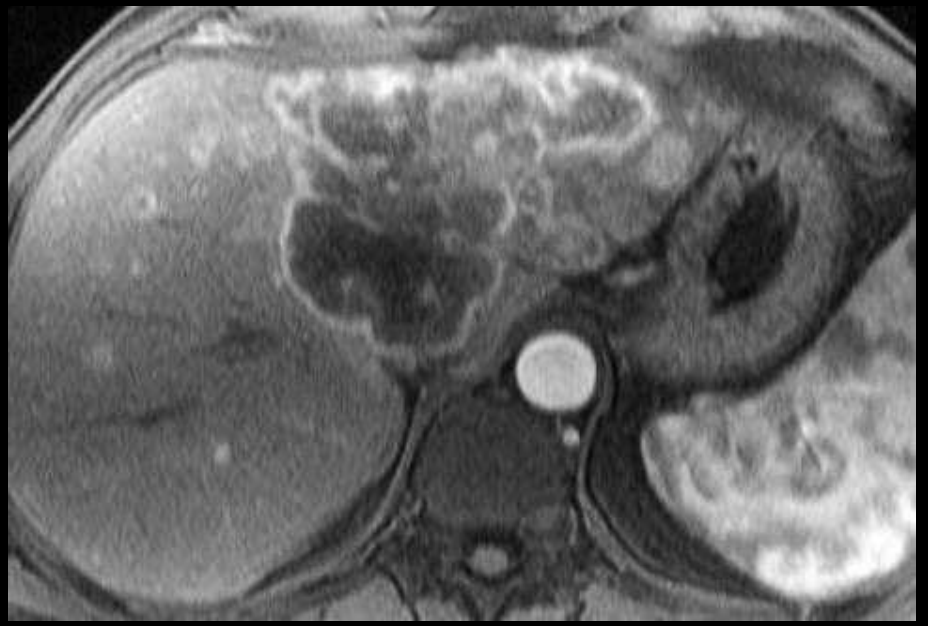
femme, 65 ans

Cholangiocarcinome intra hépatique





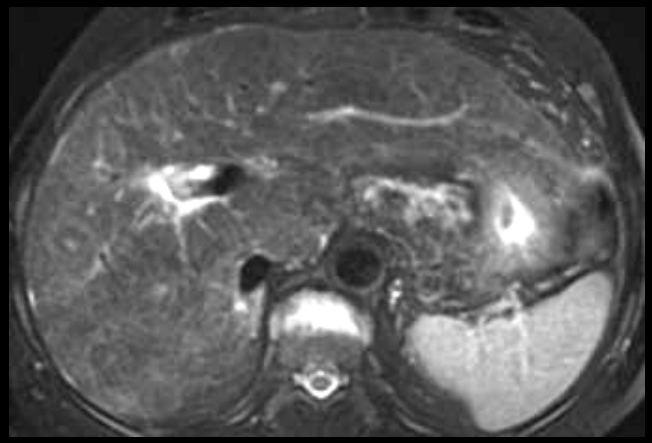


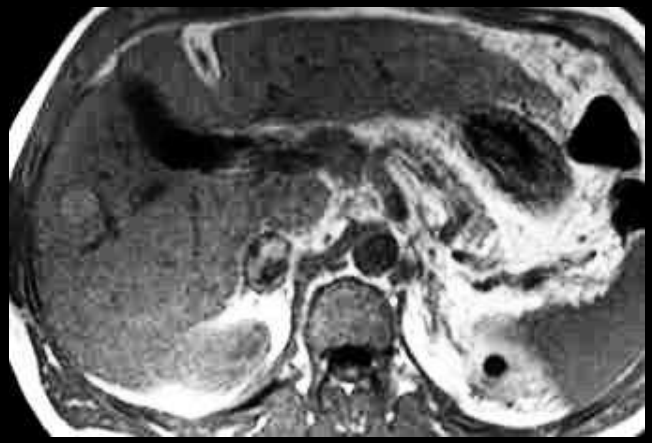


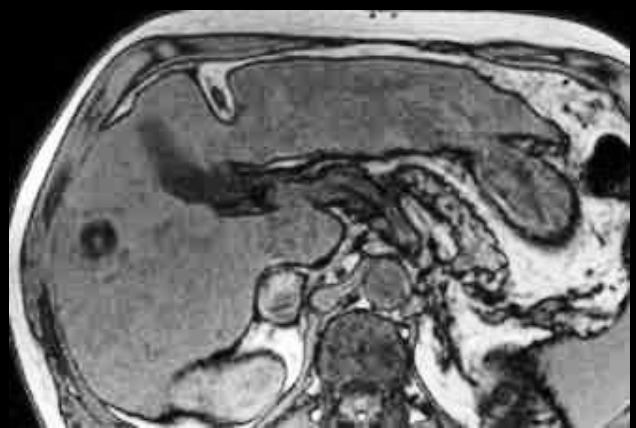
9

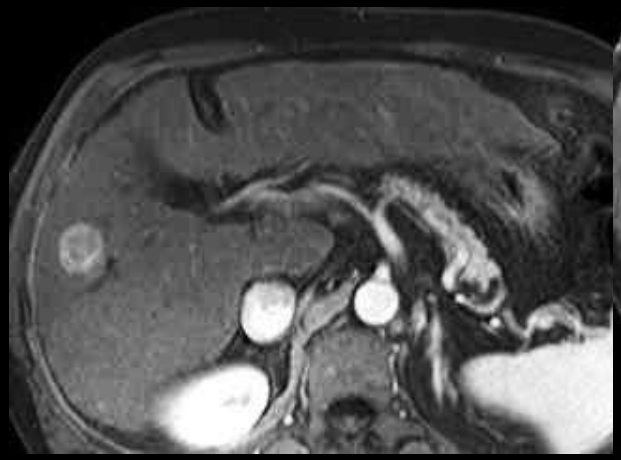
Homme, 60 ans

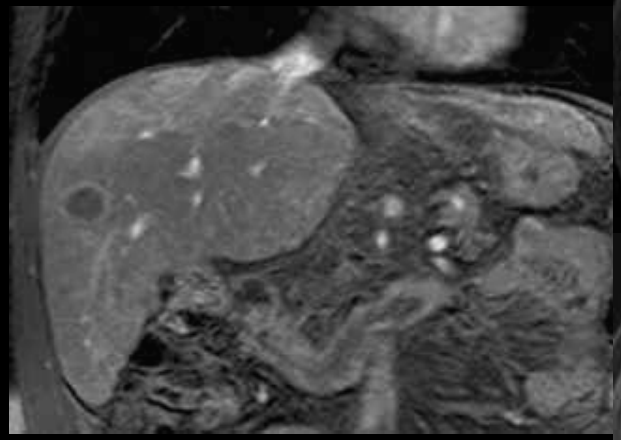
CHC bien différencié fatty metamorphosis

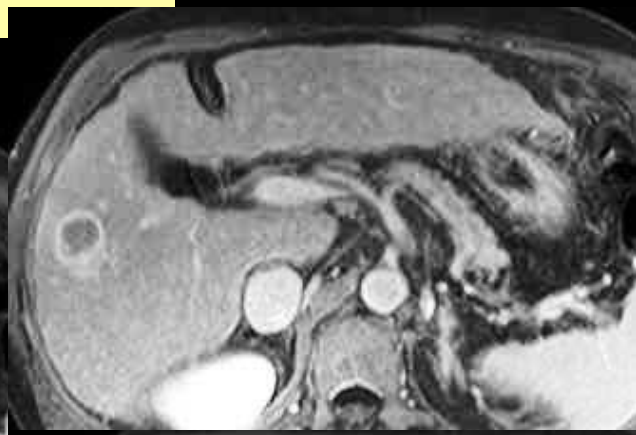


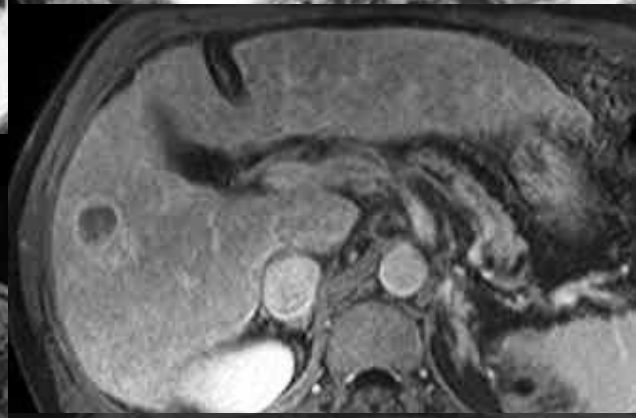


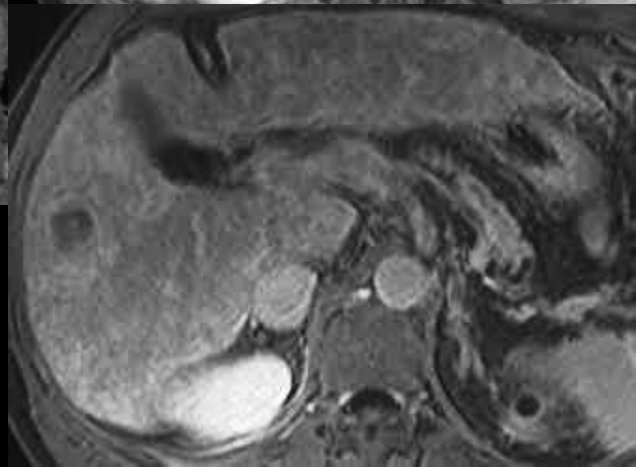








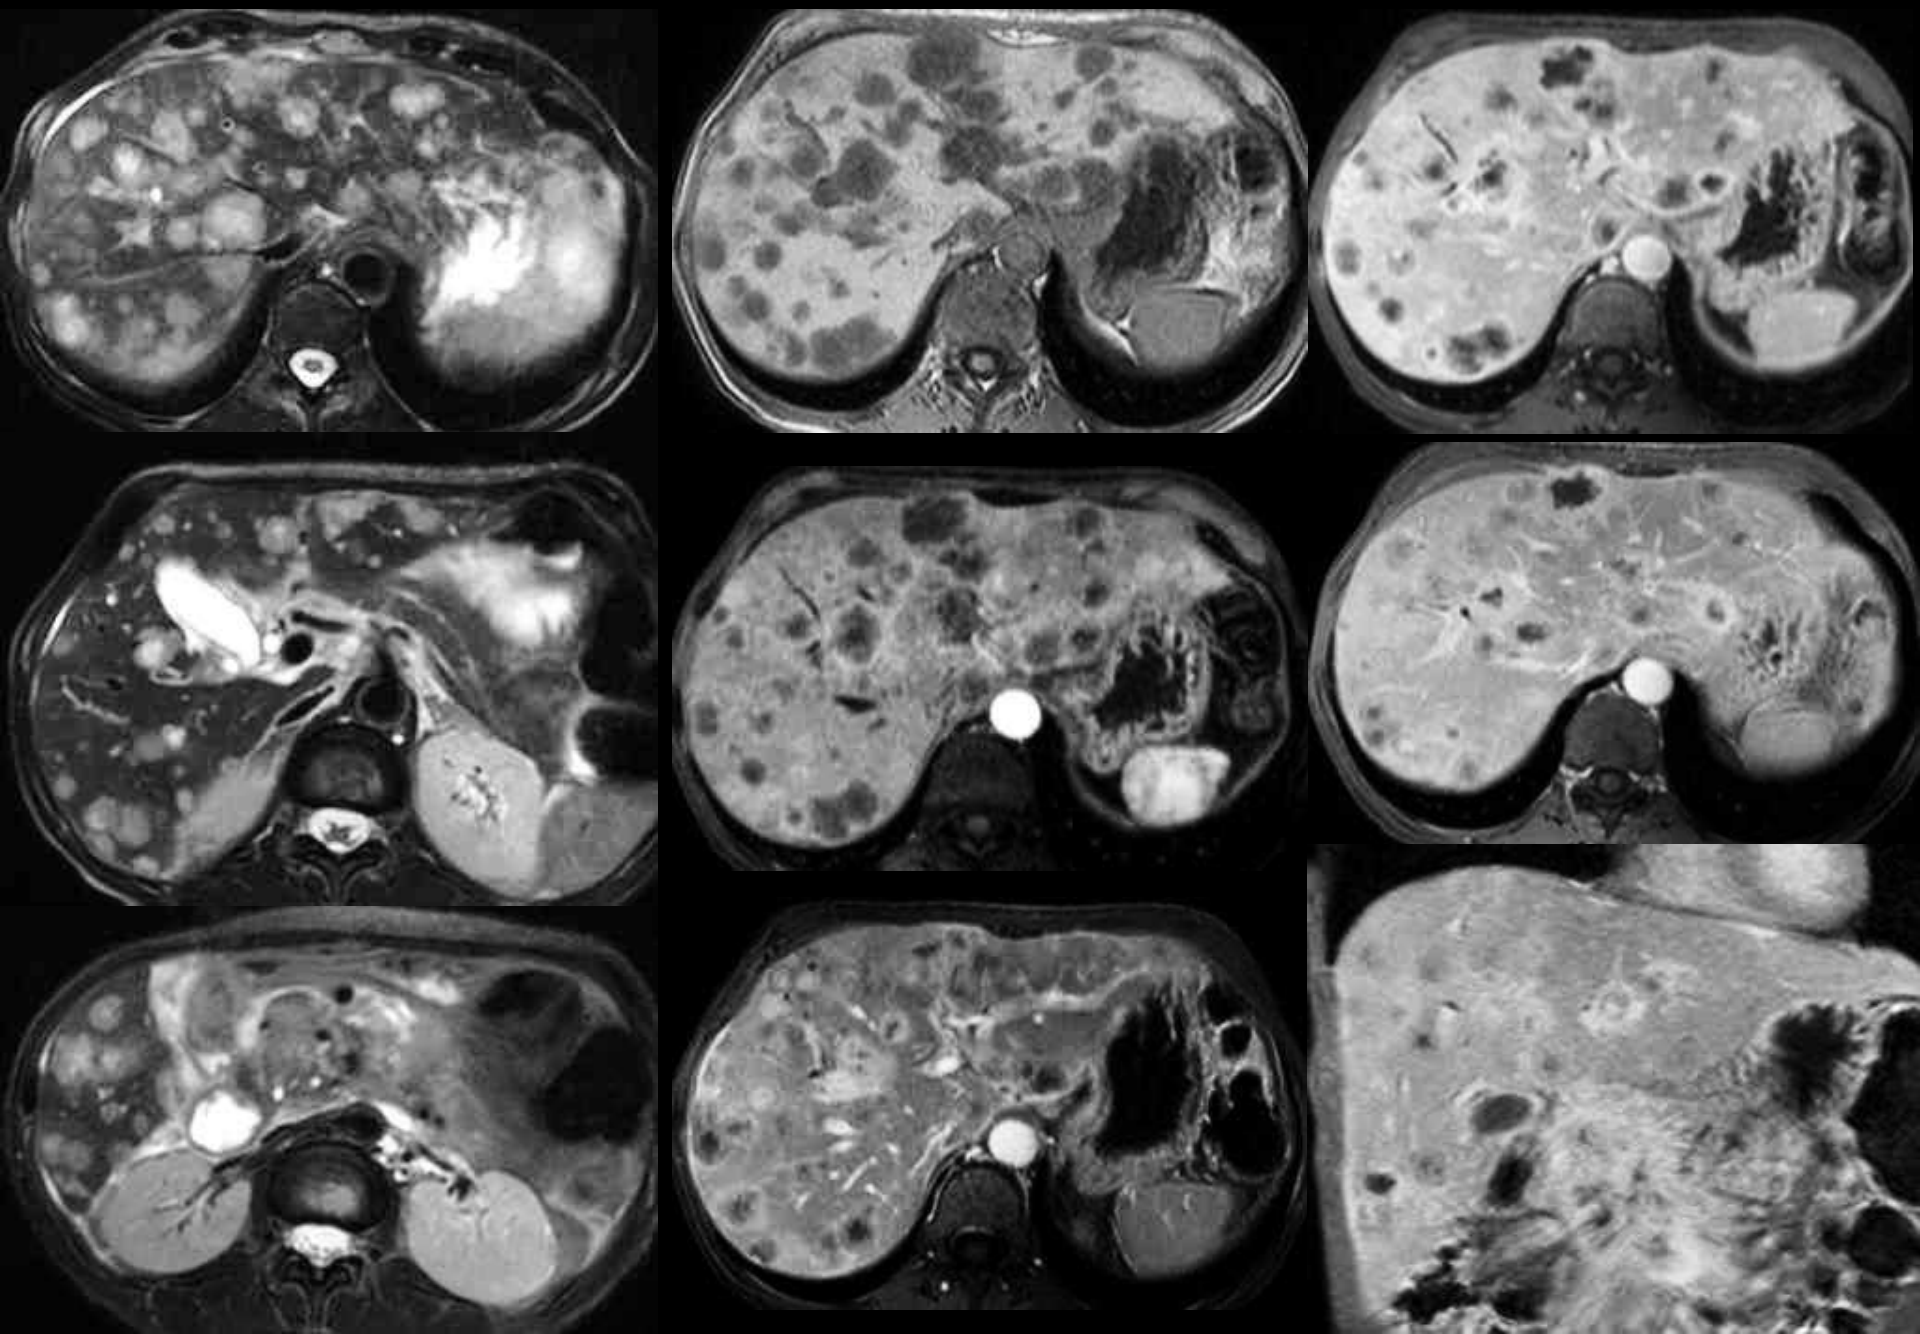




10

femme, 45 ans

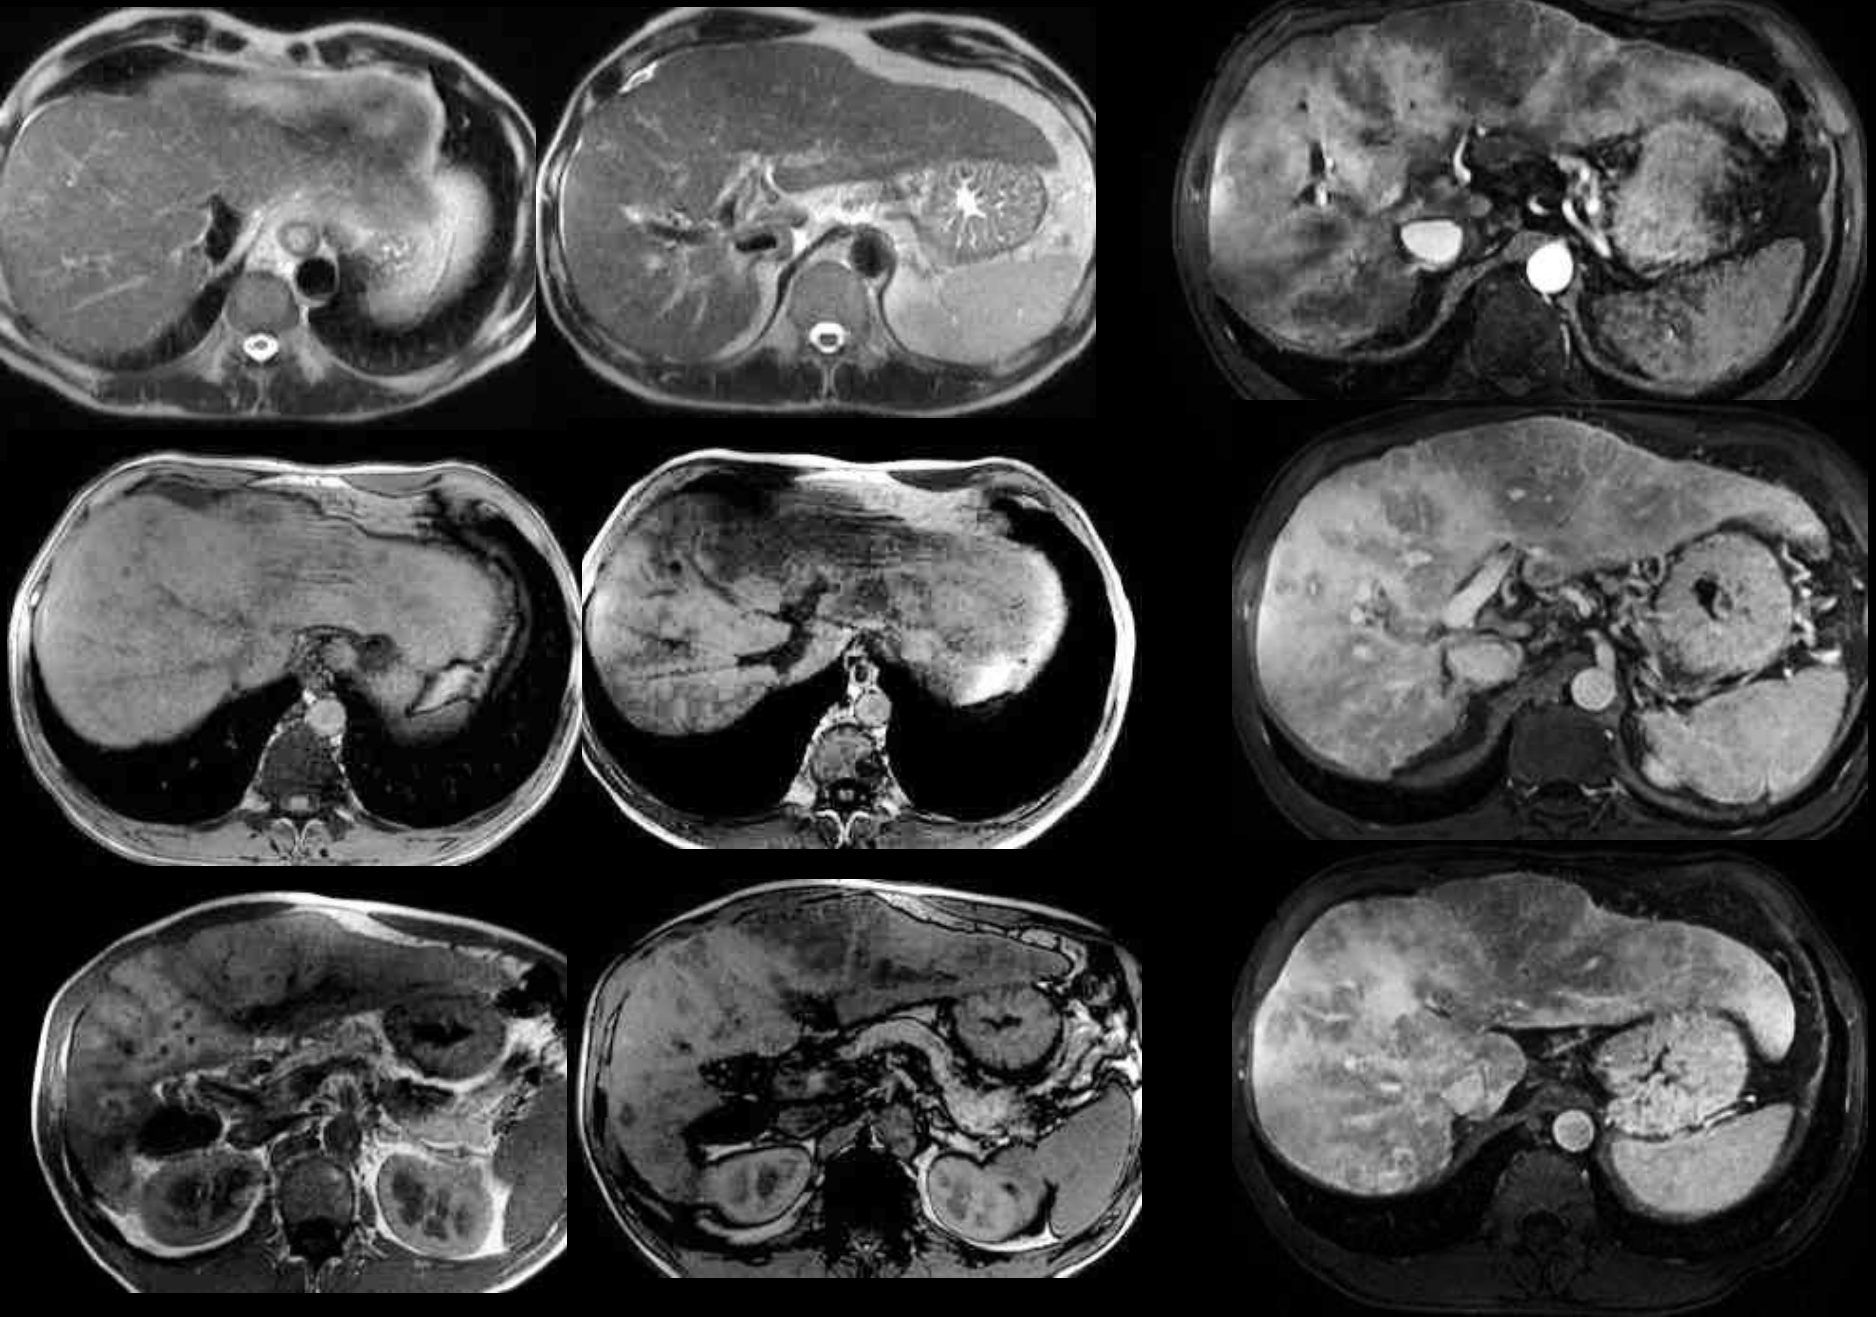
Métastases de tumeur du pancréas



11

Homme, 50 ans

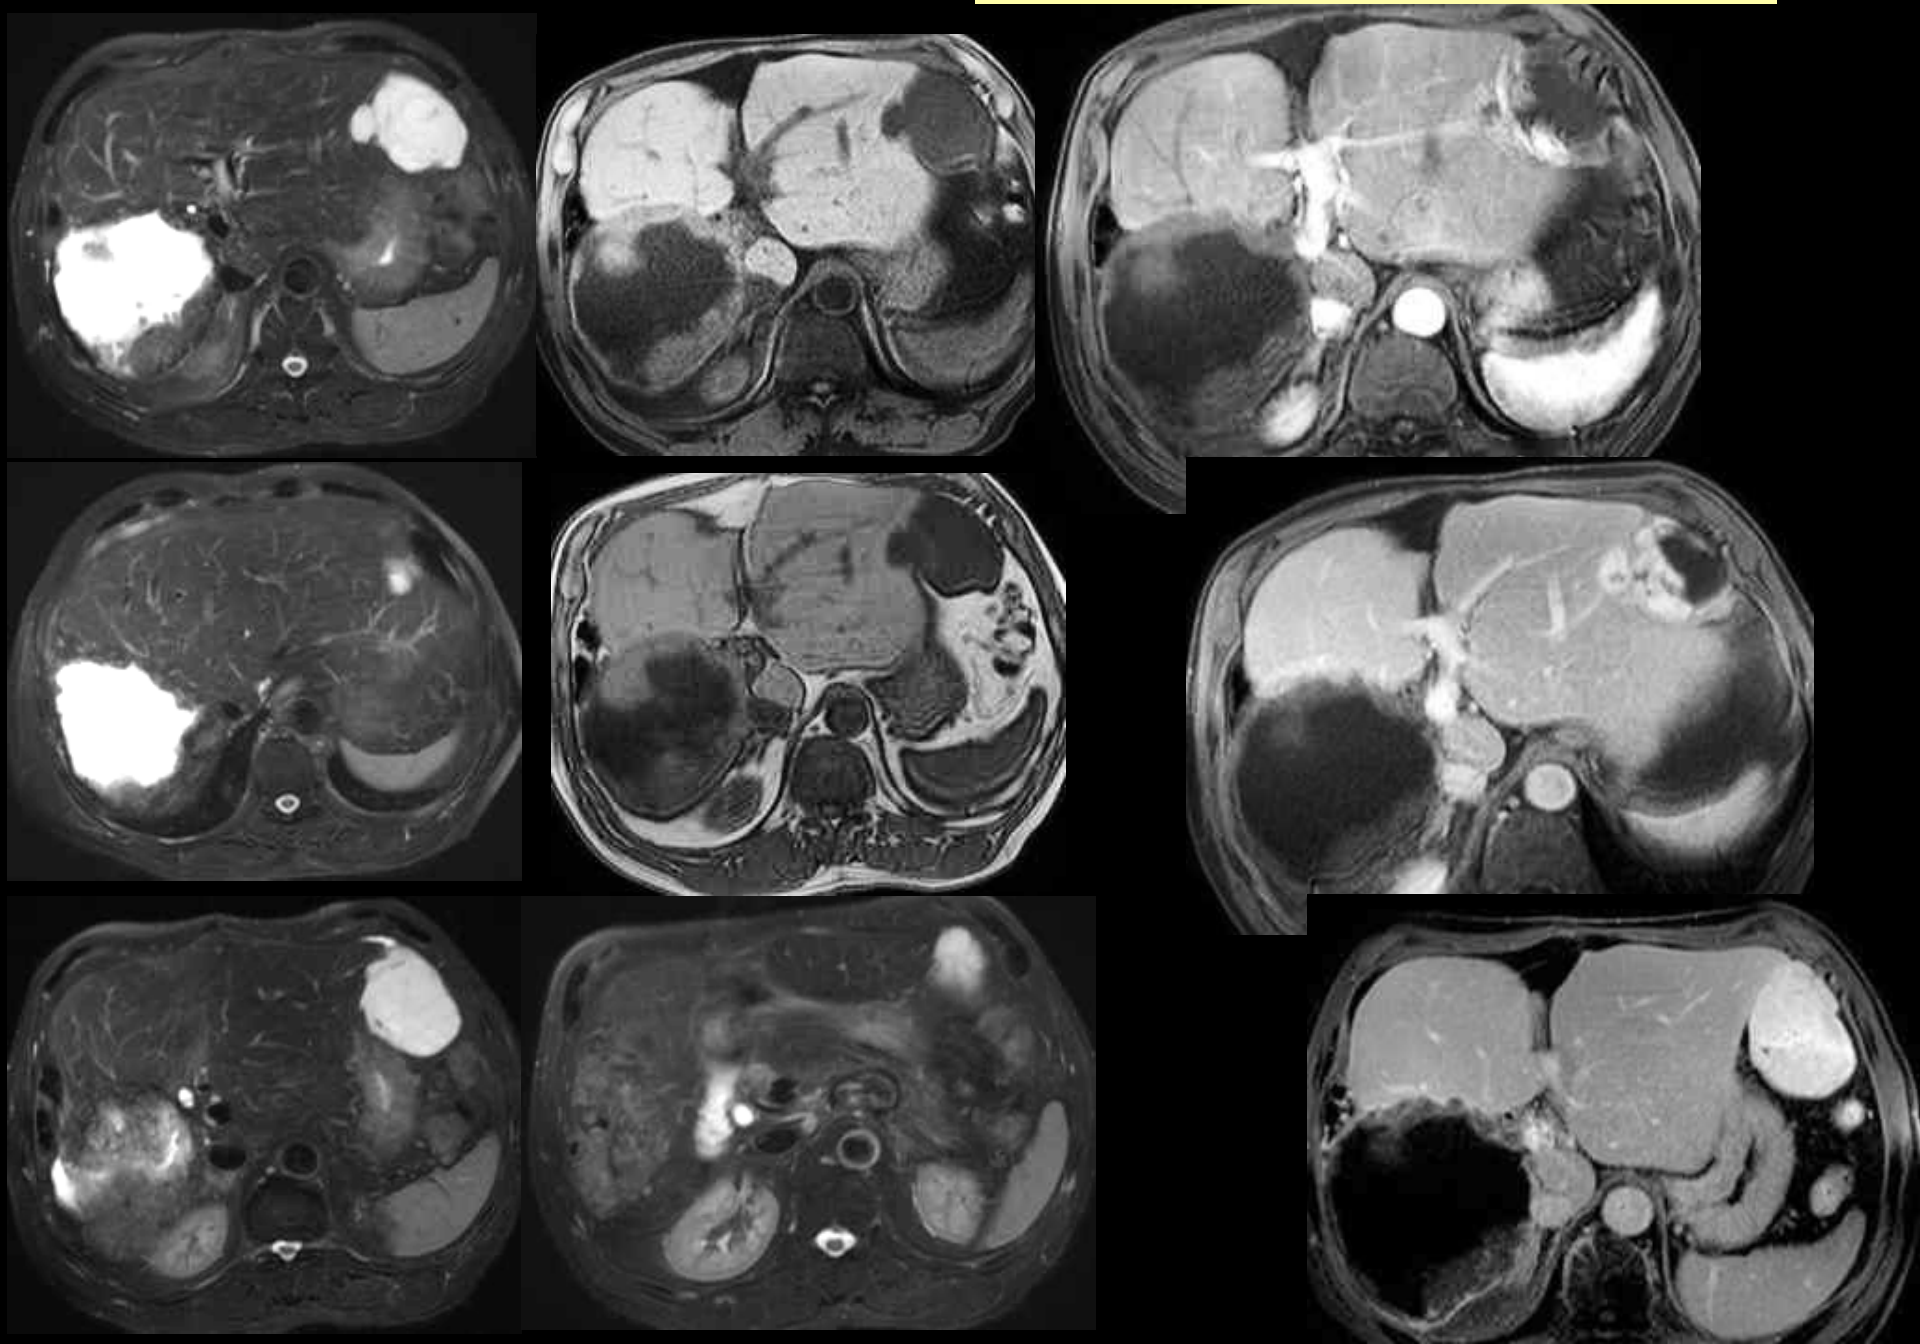
Cirrhose et stéatose périvasculaire



12

homme, 70 ans

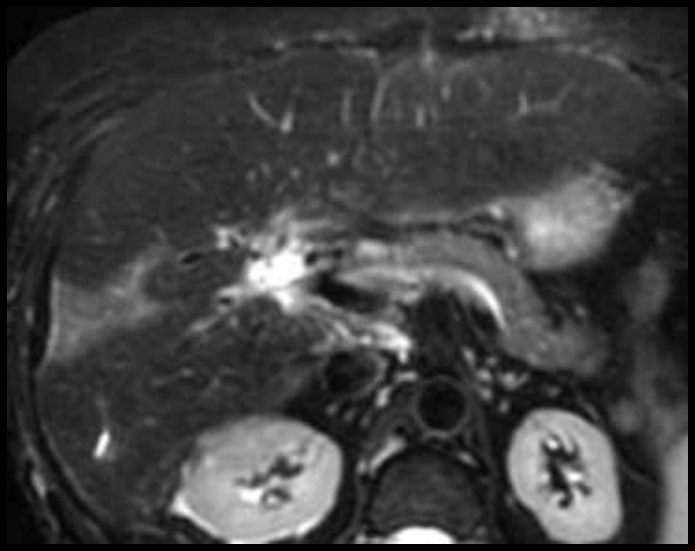
Echinoccocose et angiome

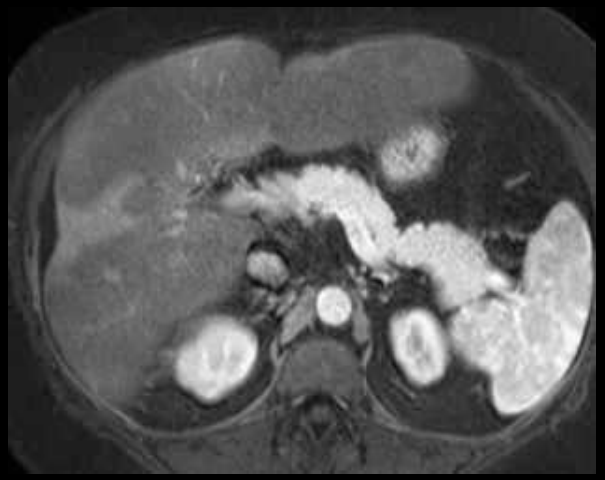


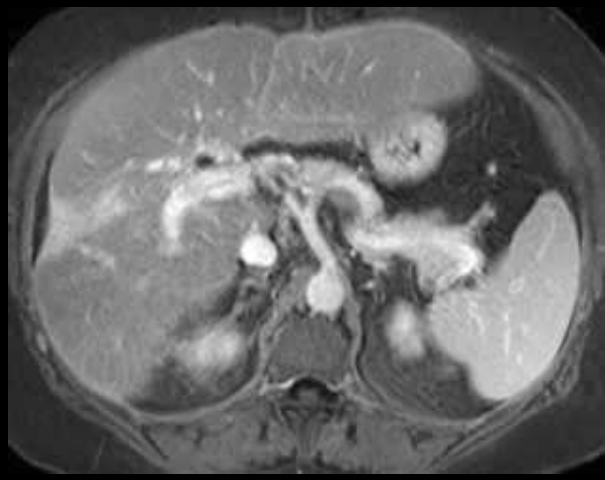
13

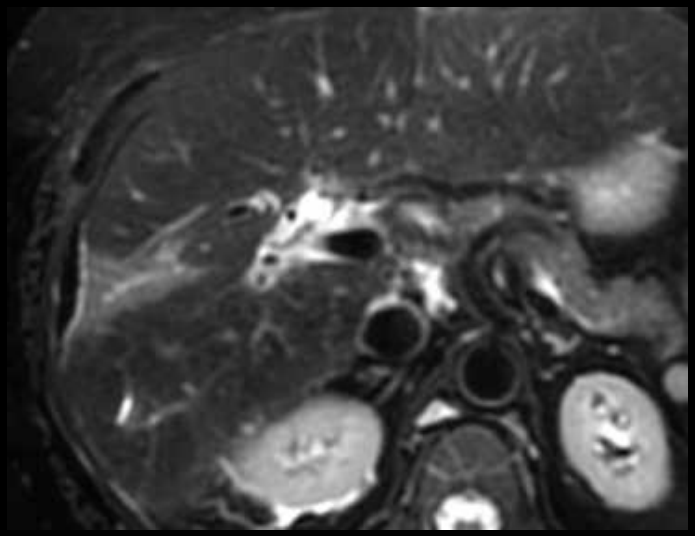
homme, 55 ans

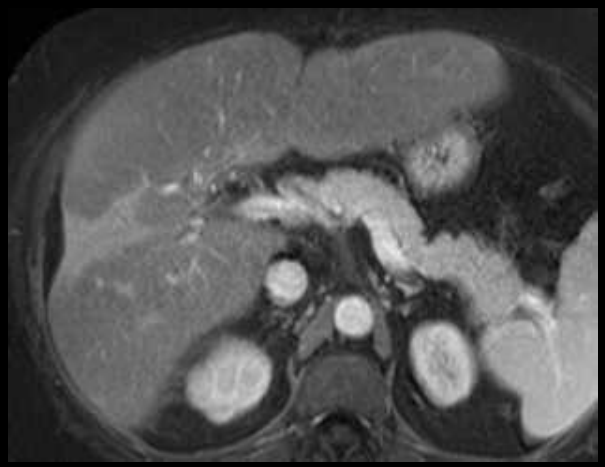
Séquence clé ?

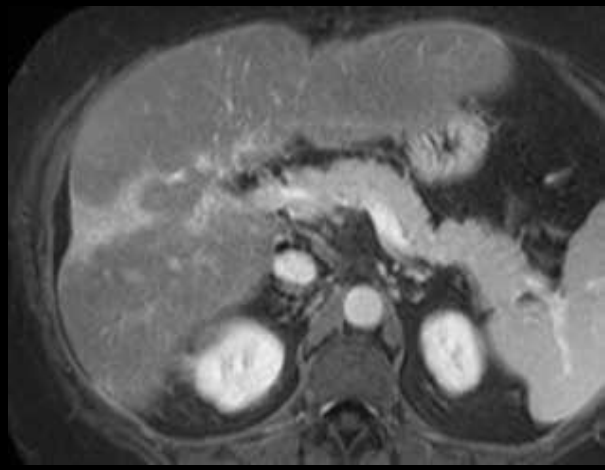




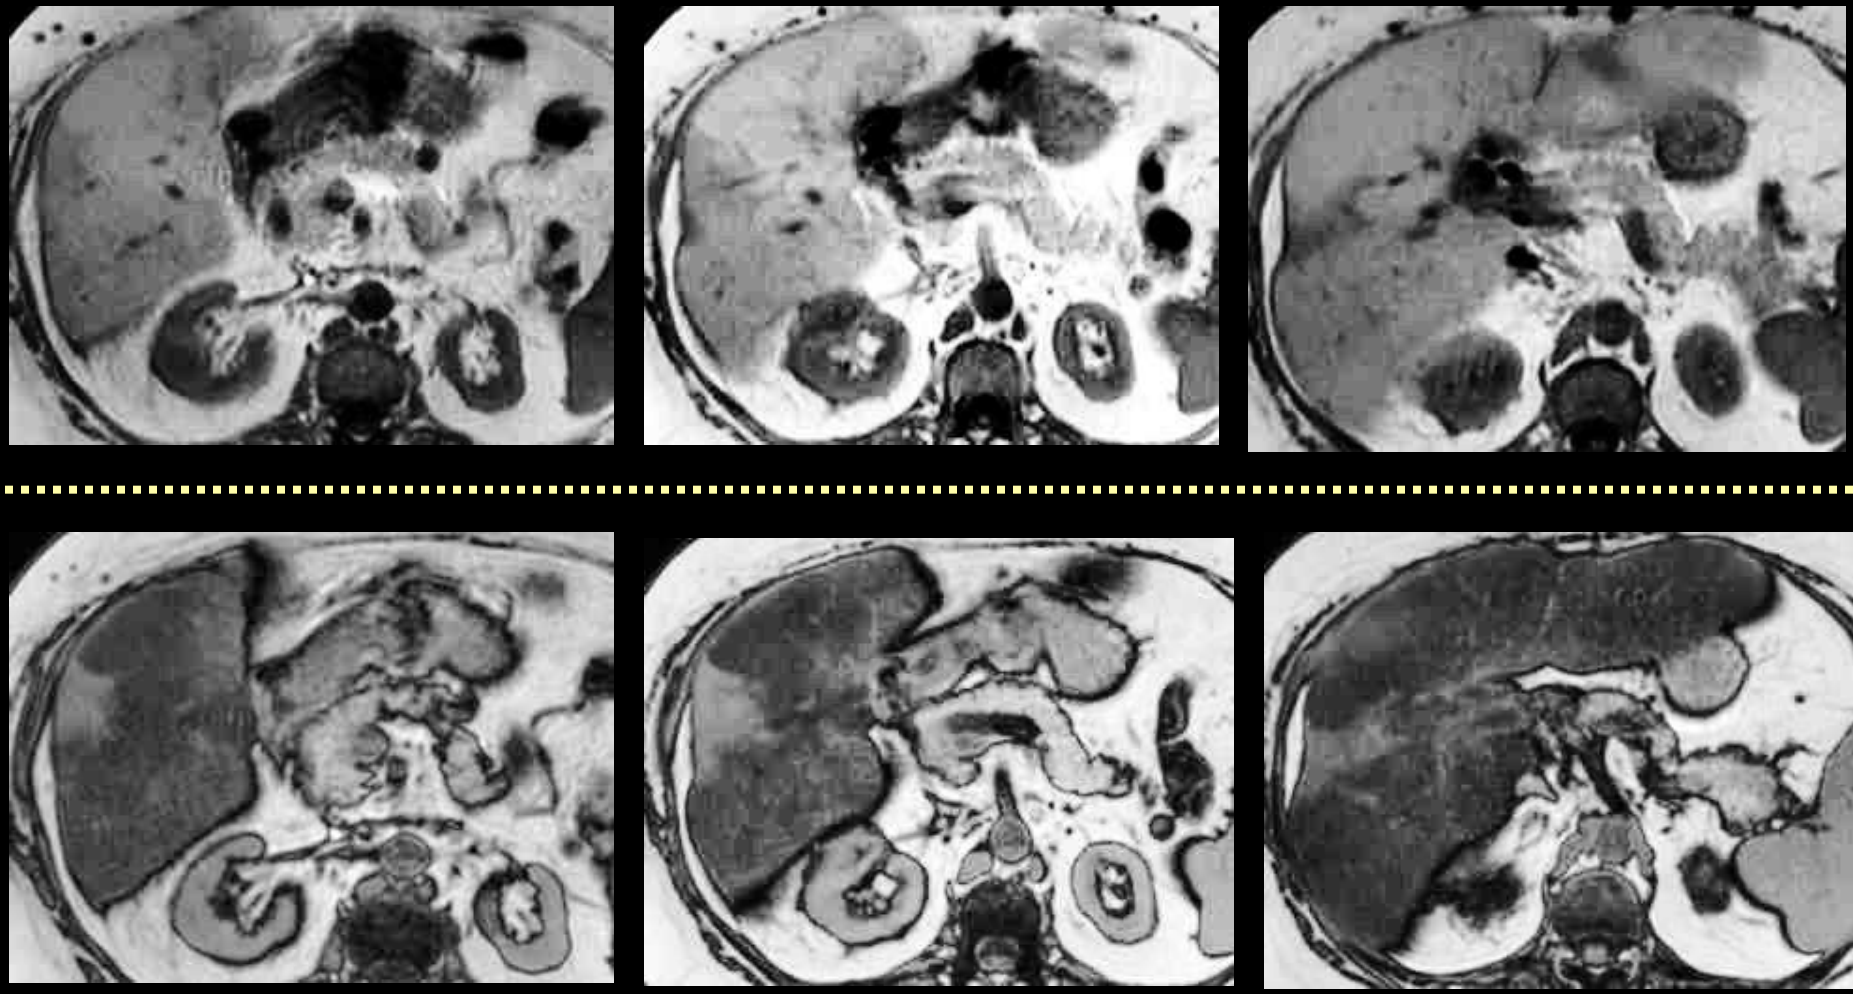








IP/OP

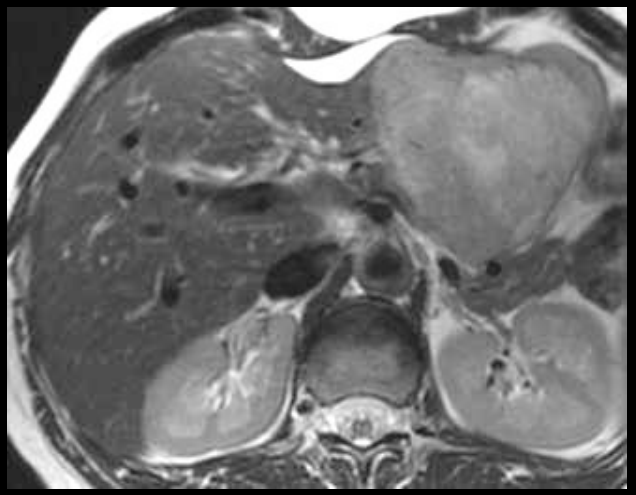


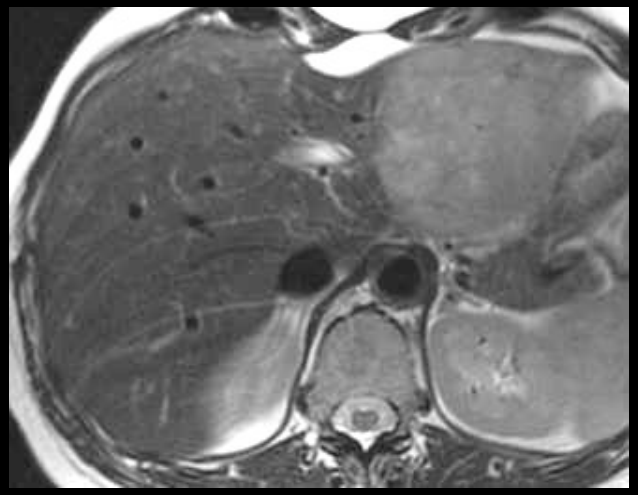
Plage de fibrose et foie stéatosique

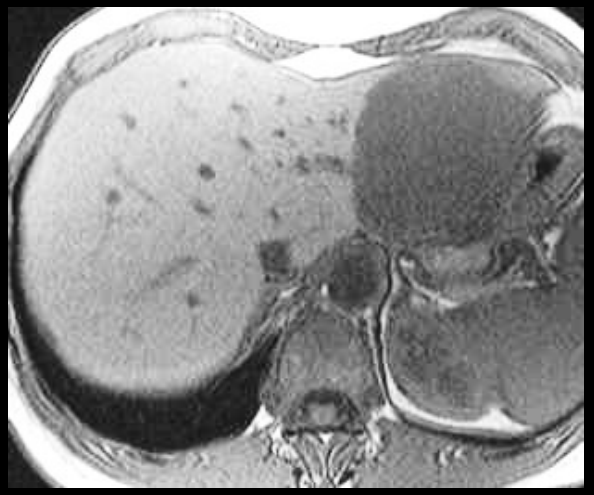
14

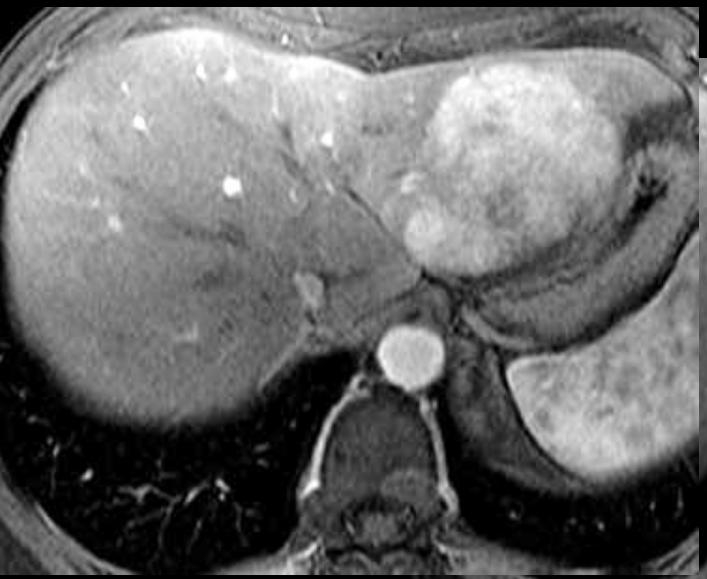
femme, 50 ans

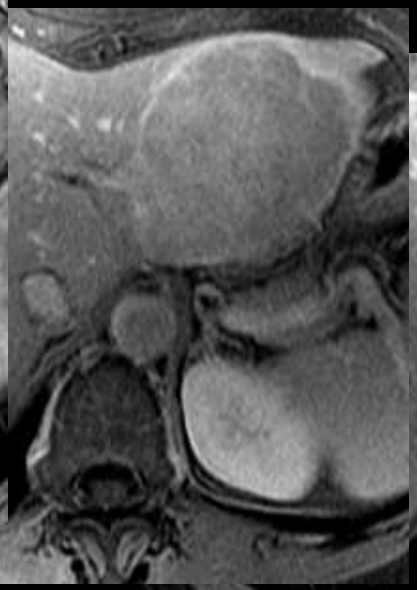
Carcinome hépatocellulaire sur foie sain

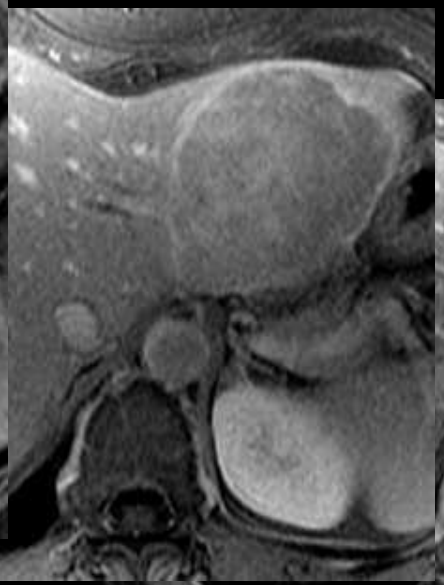


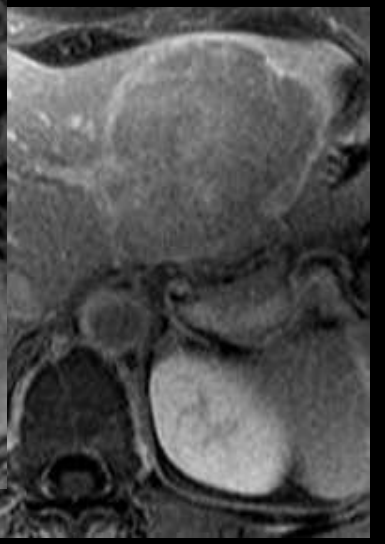








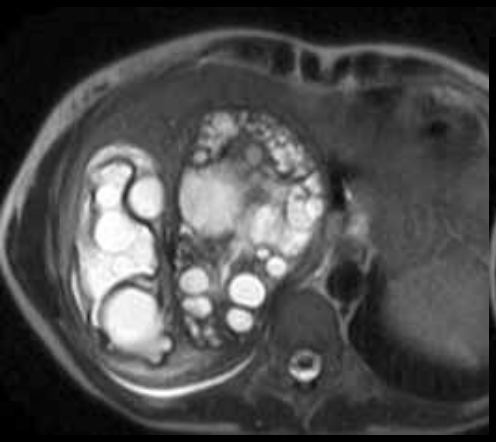


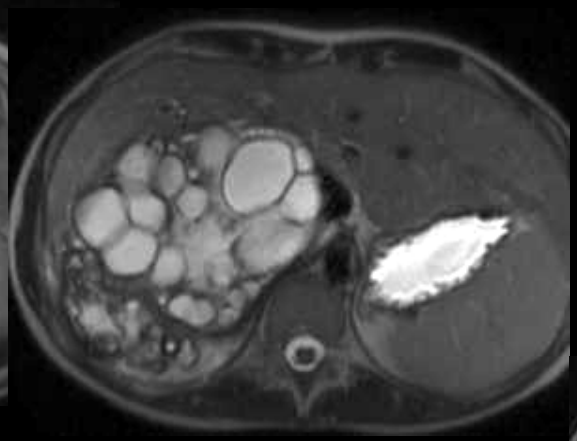


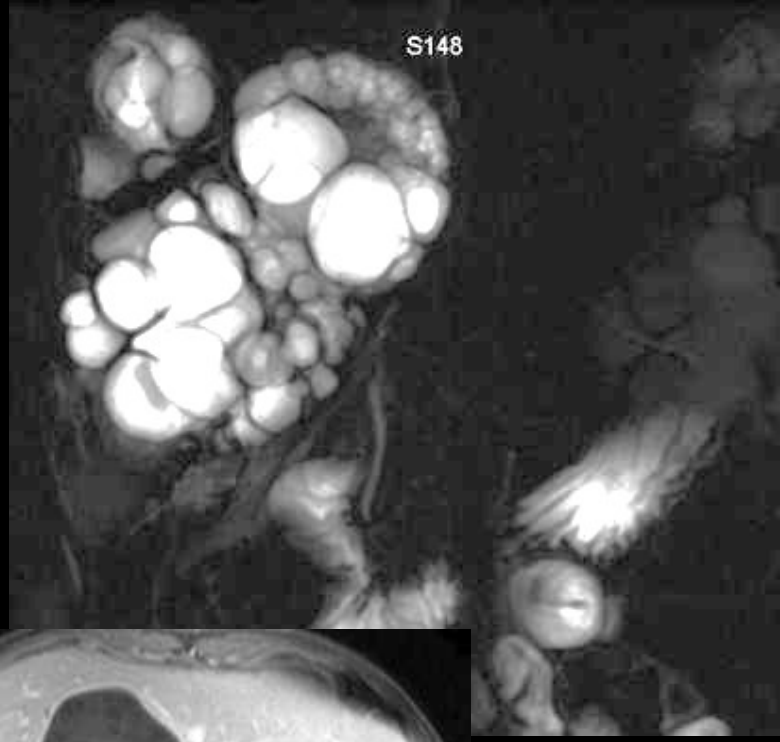
15

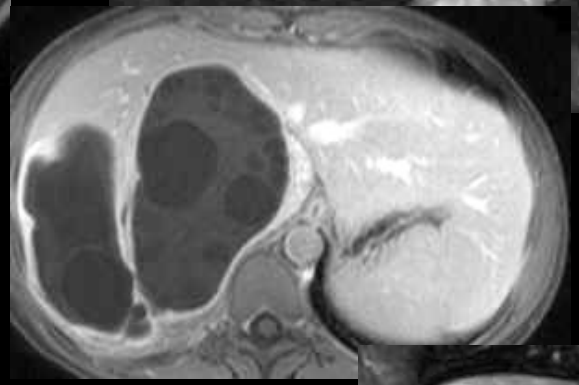
femme, 30 ans

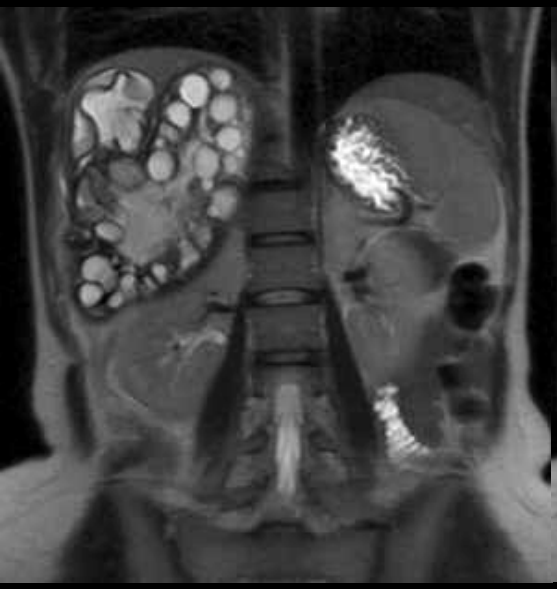
Kyste hydatique

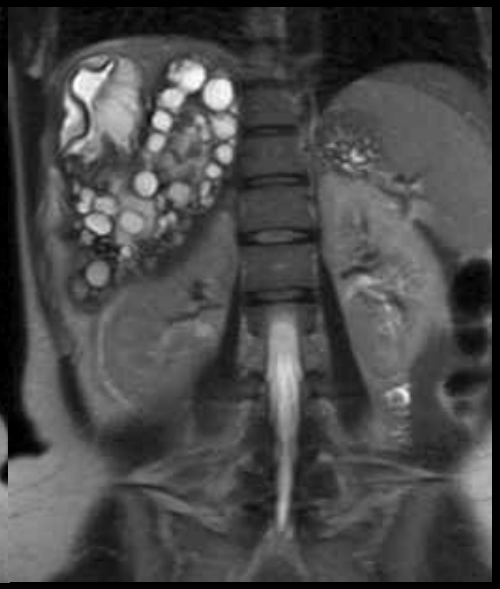


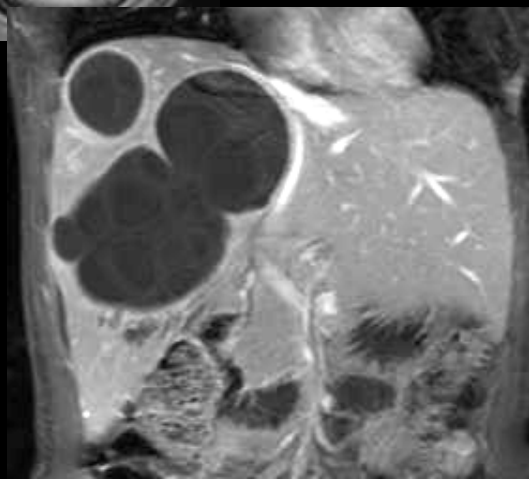






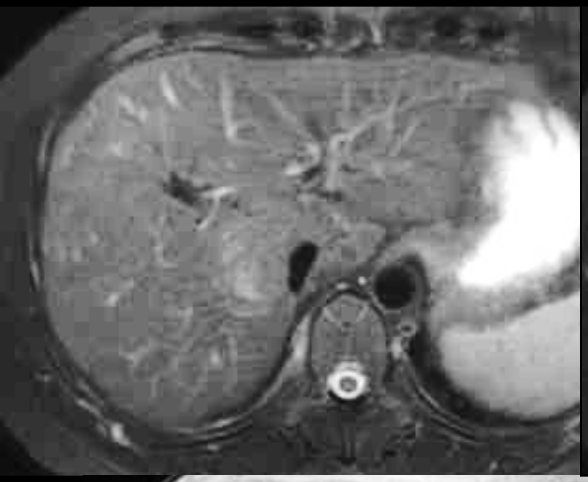


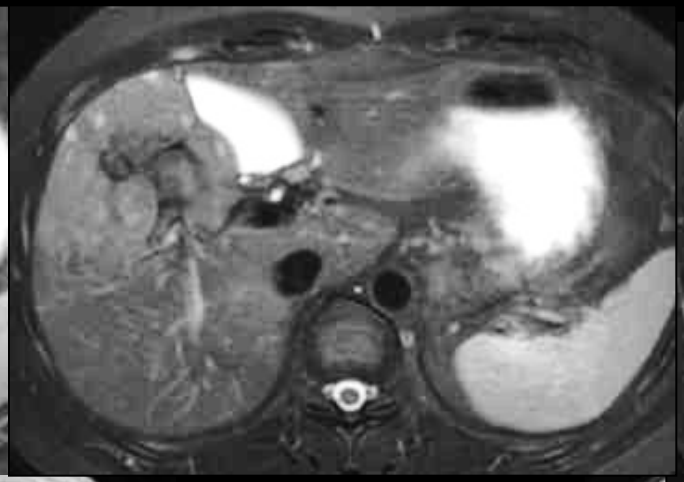


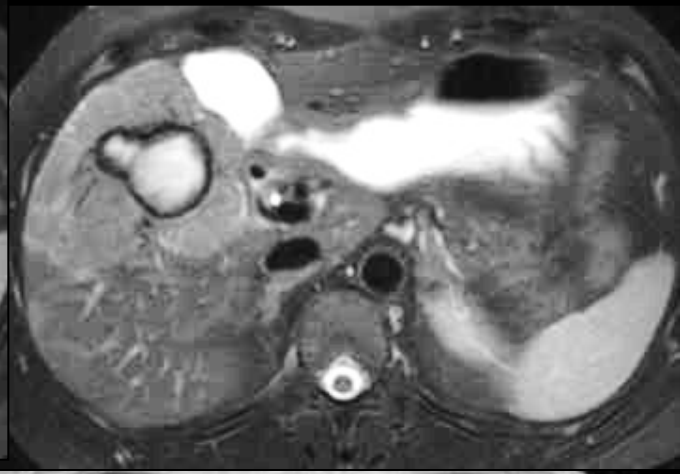


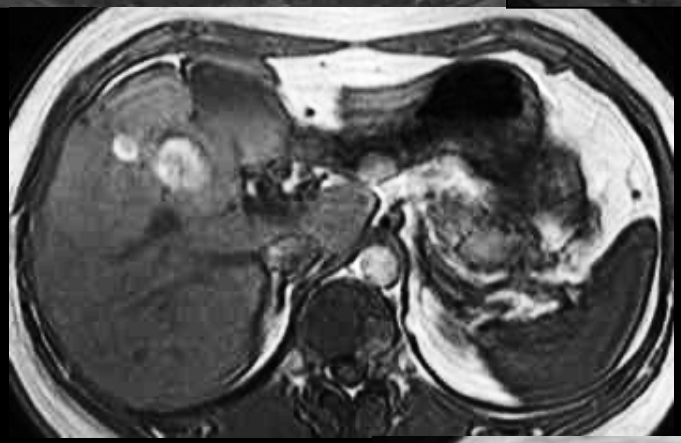
16

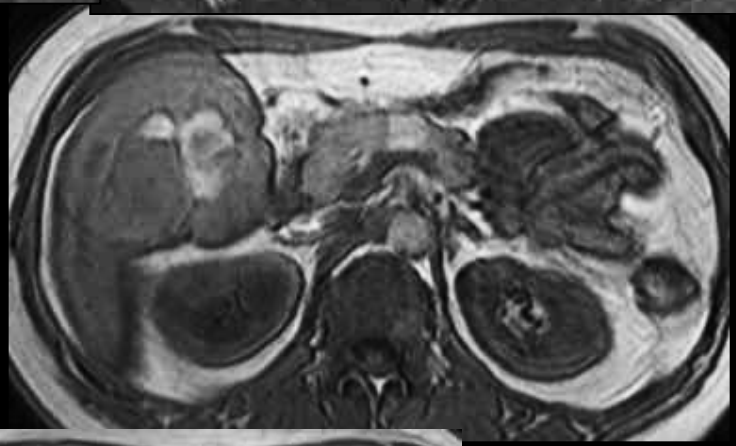
femme, 40 ans

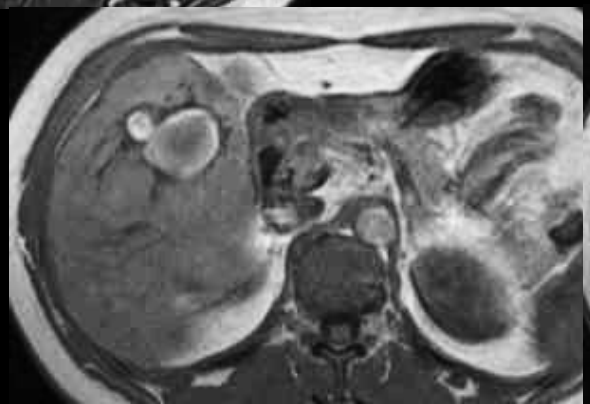


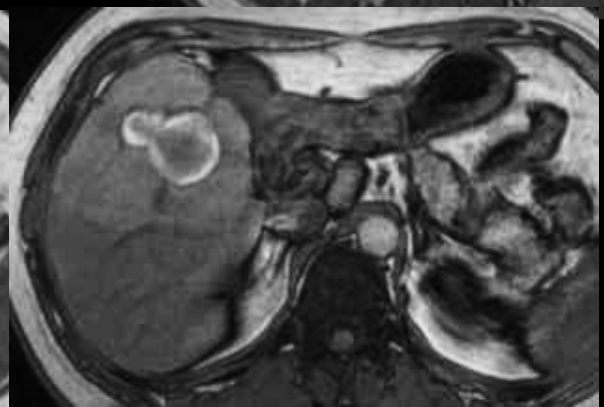




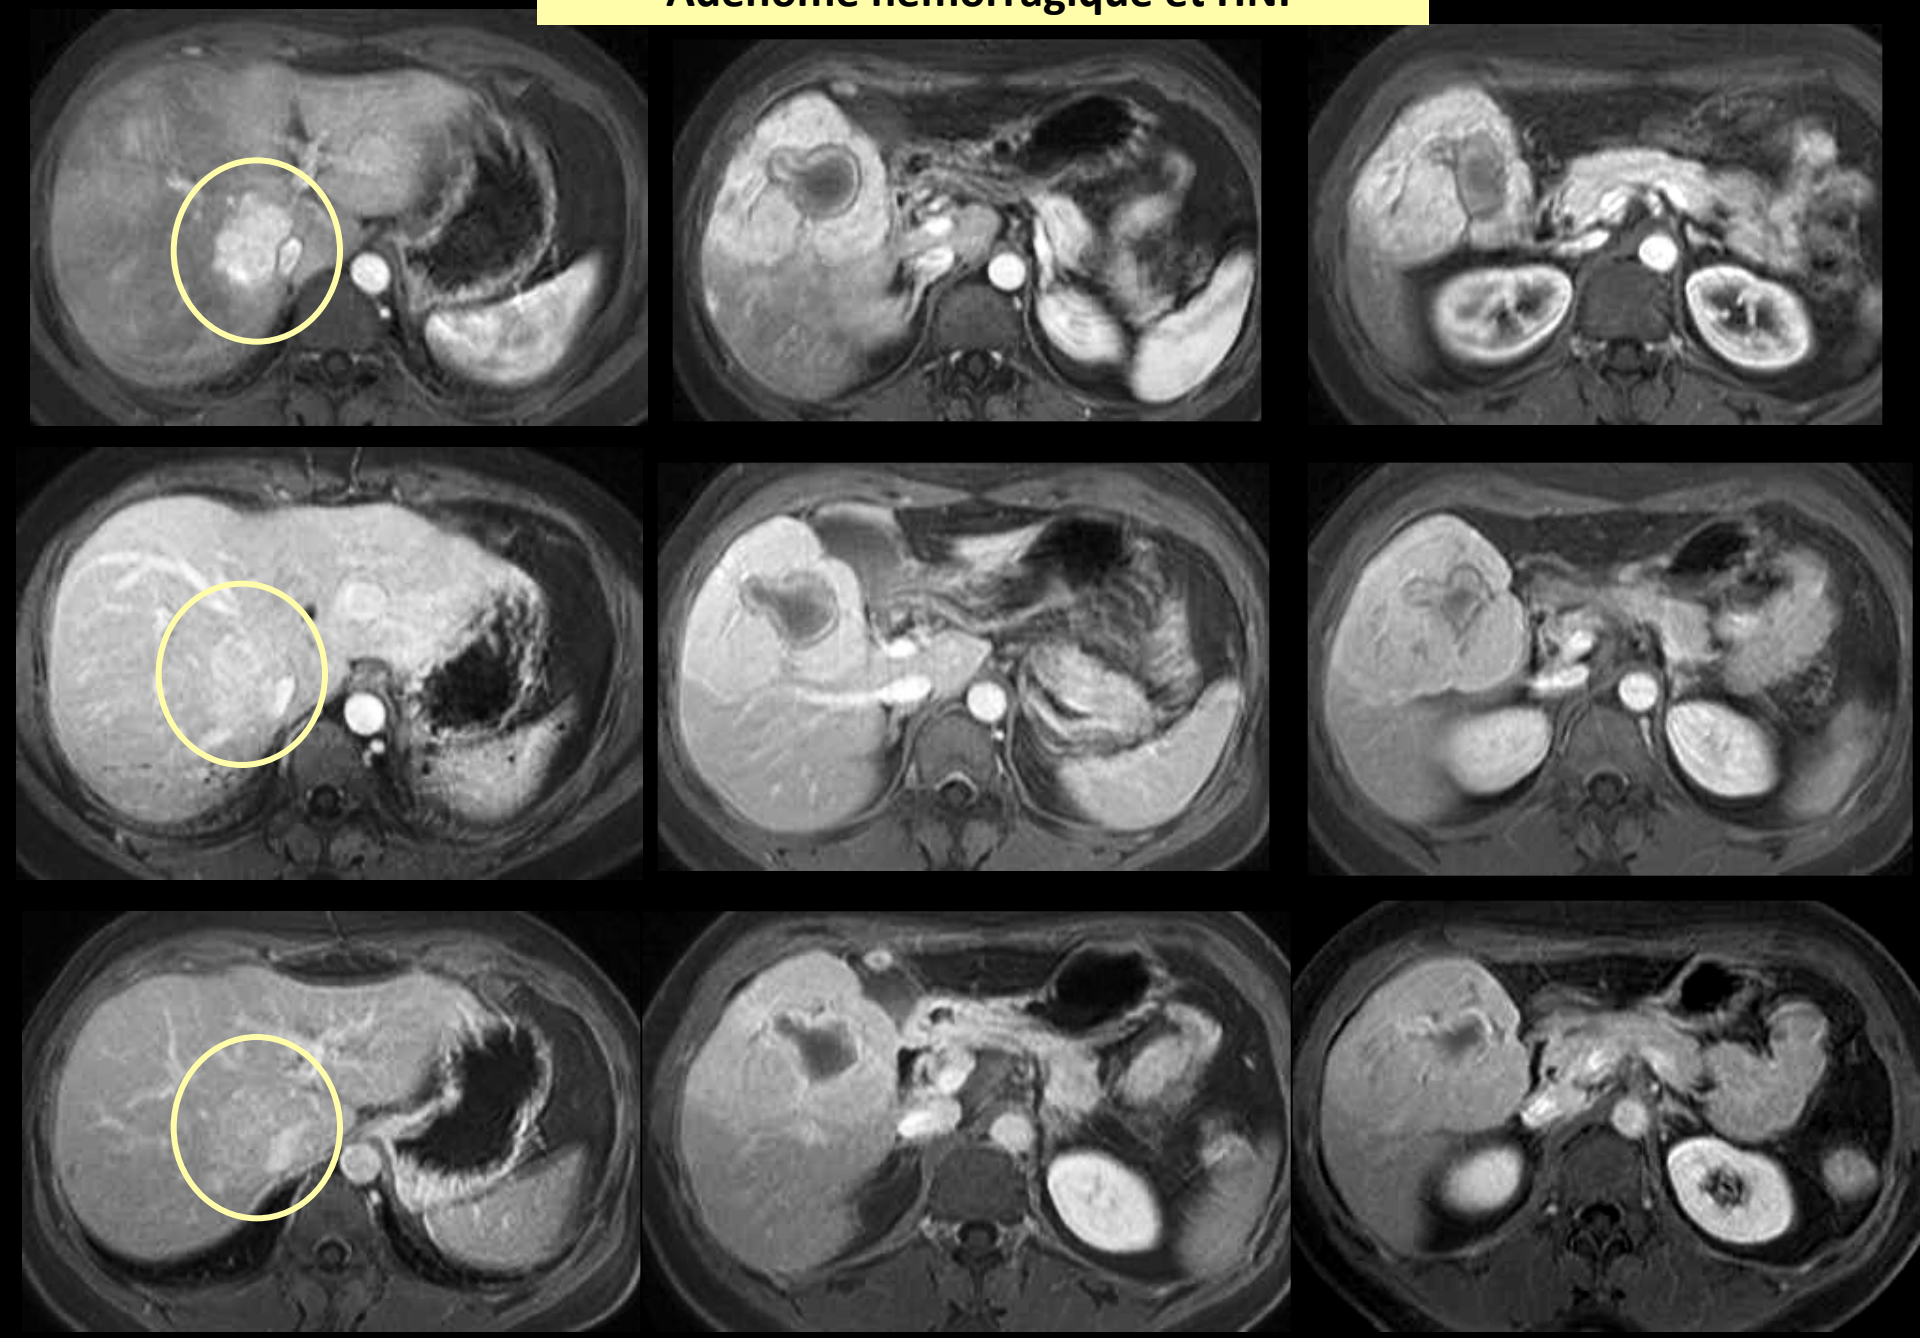






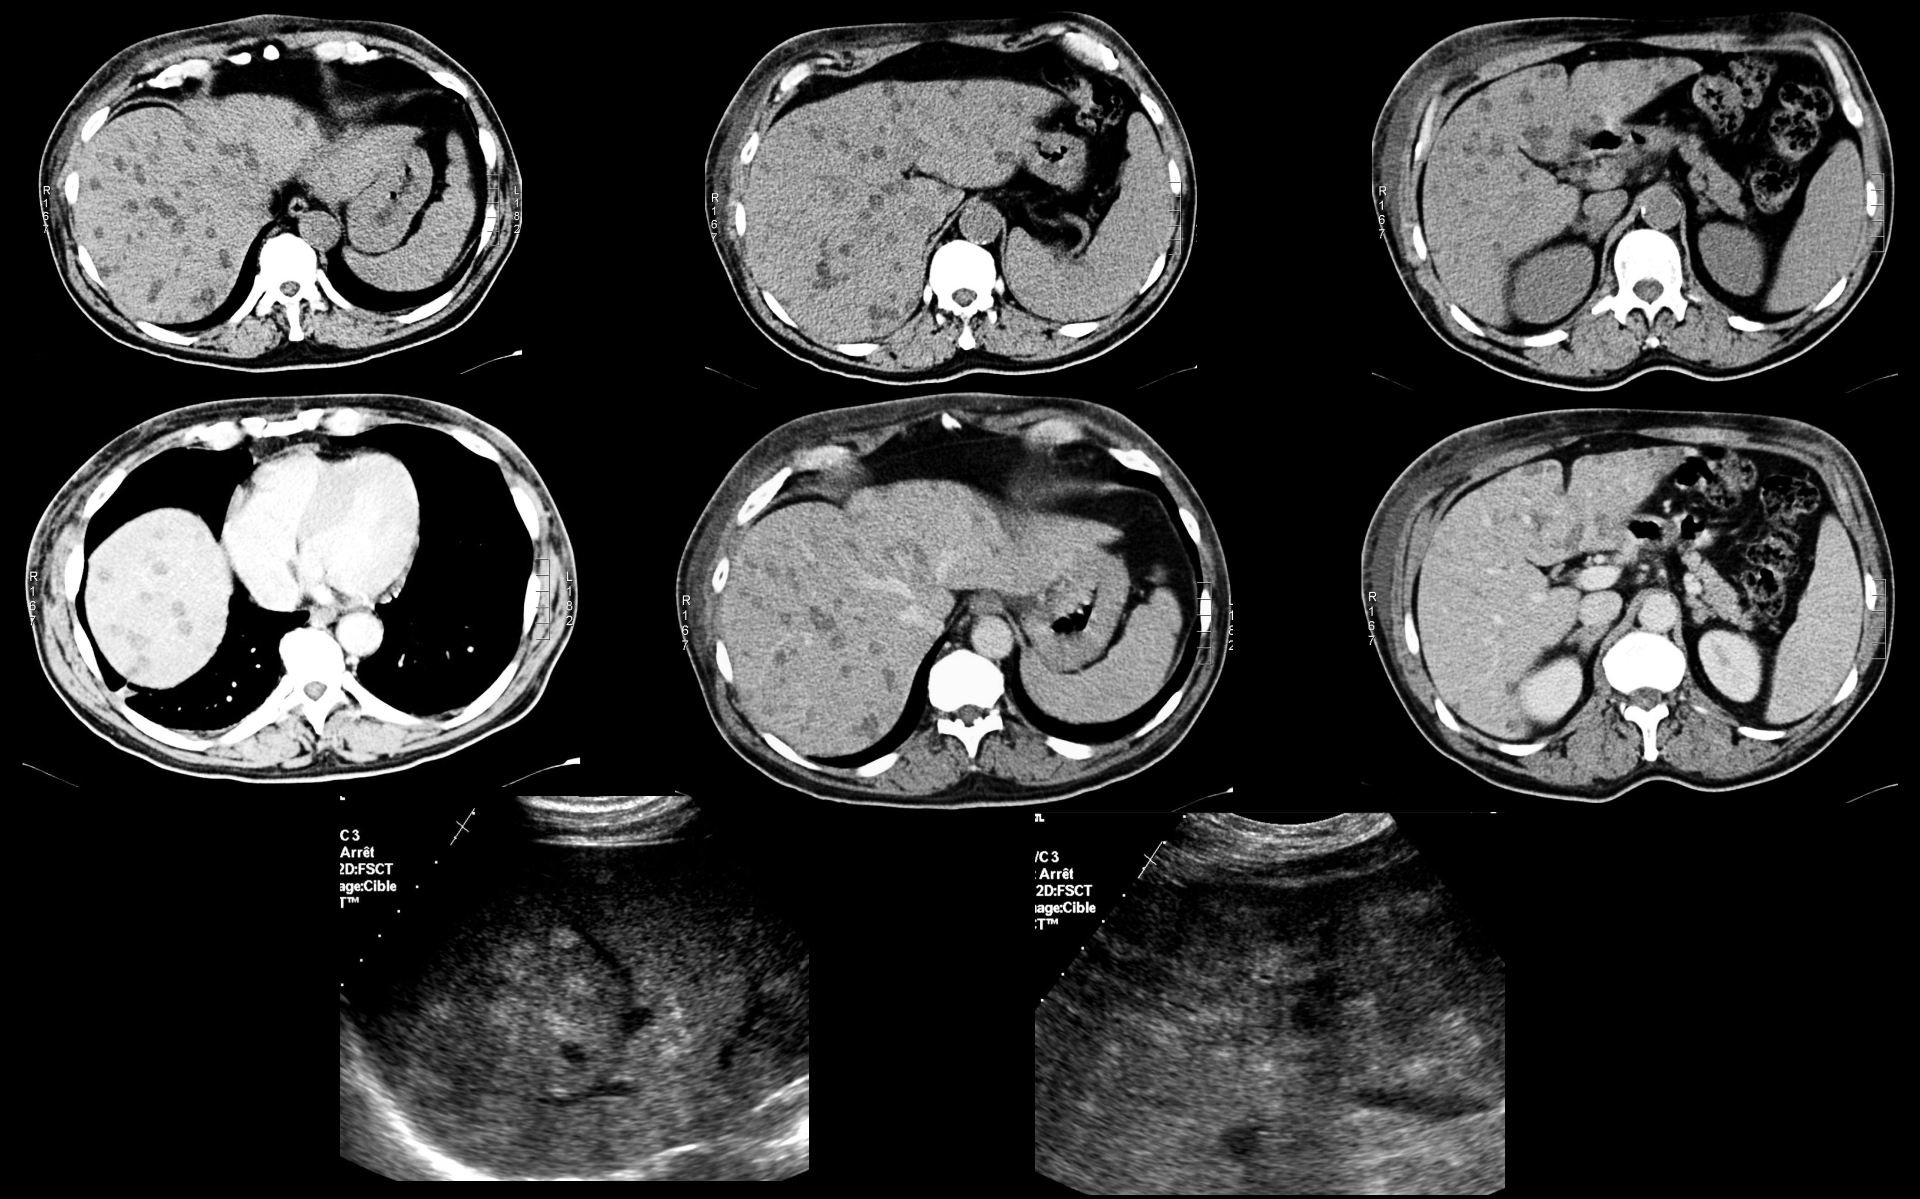


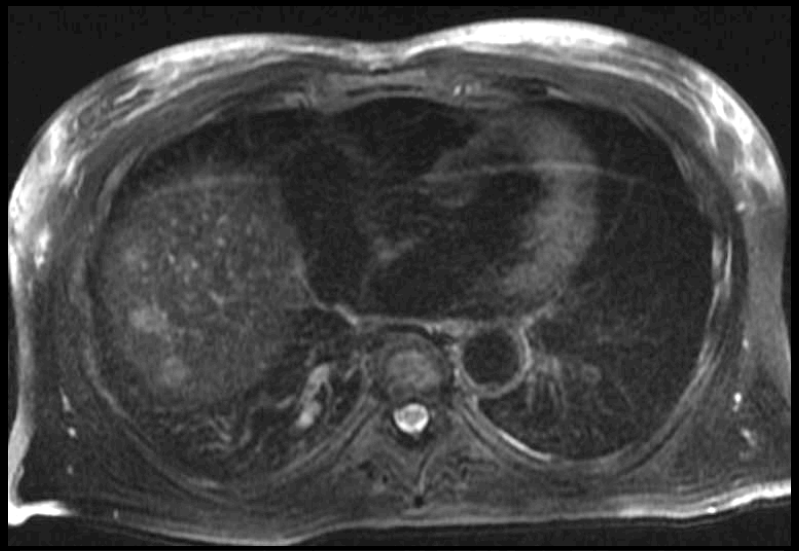
Adénome hémorragique et HNF

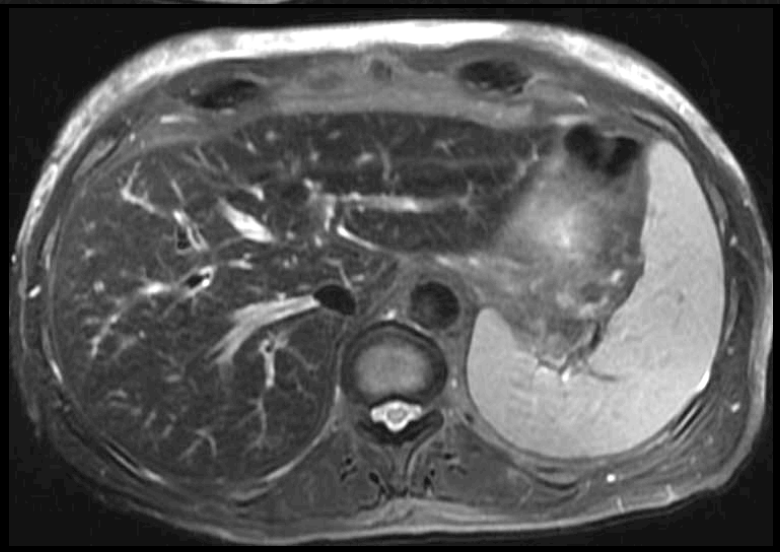


17

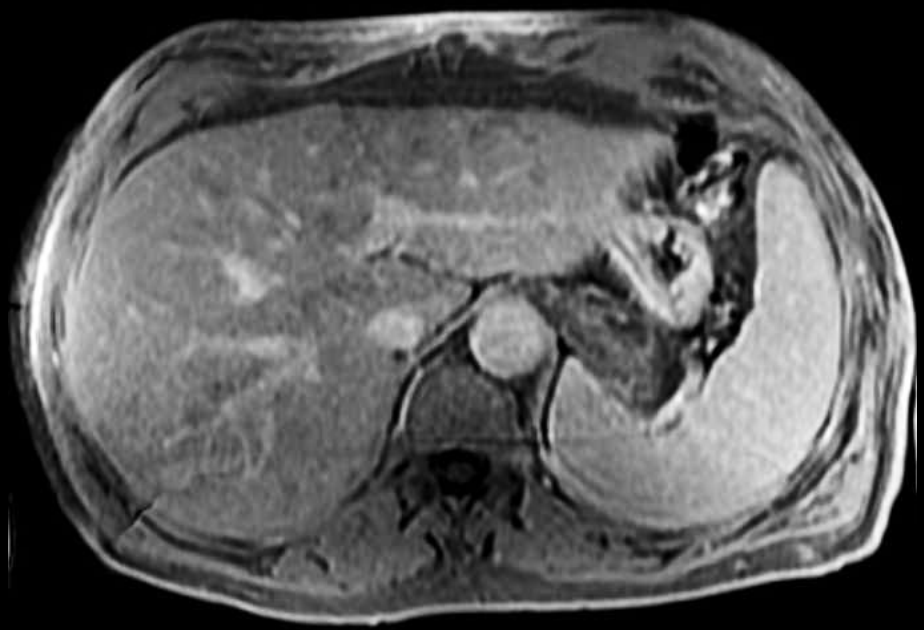
Homme 59 ans
Antécédent d'hépatite C traitée par interféron et Ribavirine pendant 8 mois
Fièvre
Bilan infectieux négatif



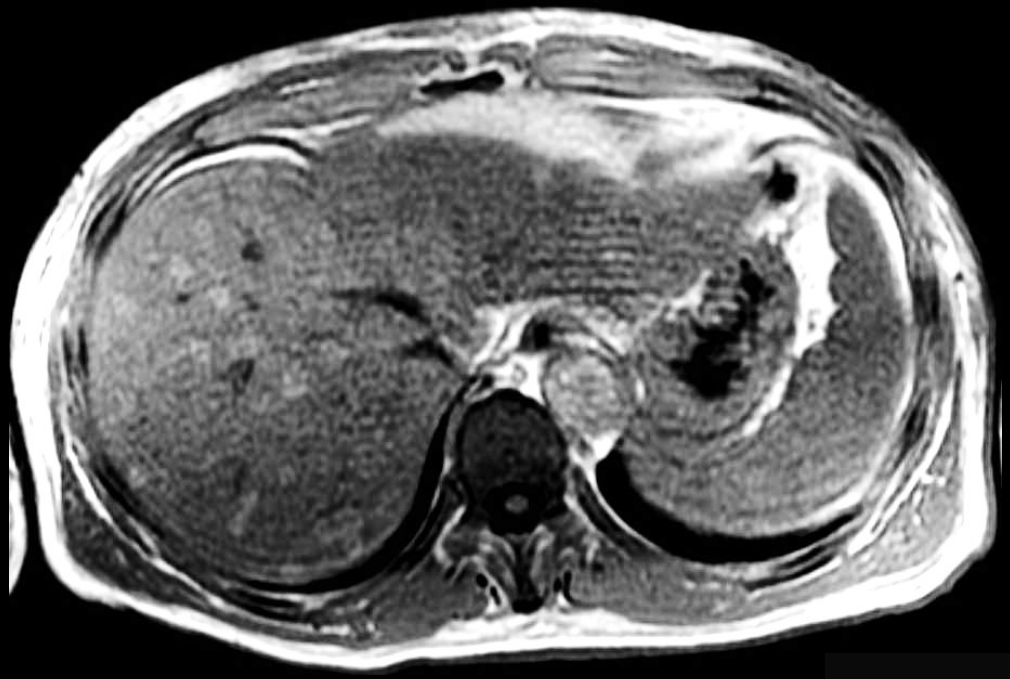




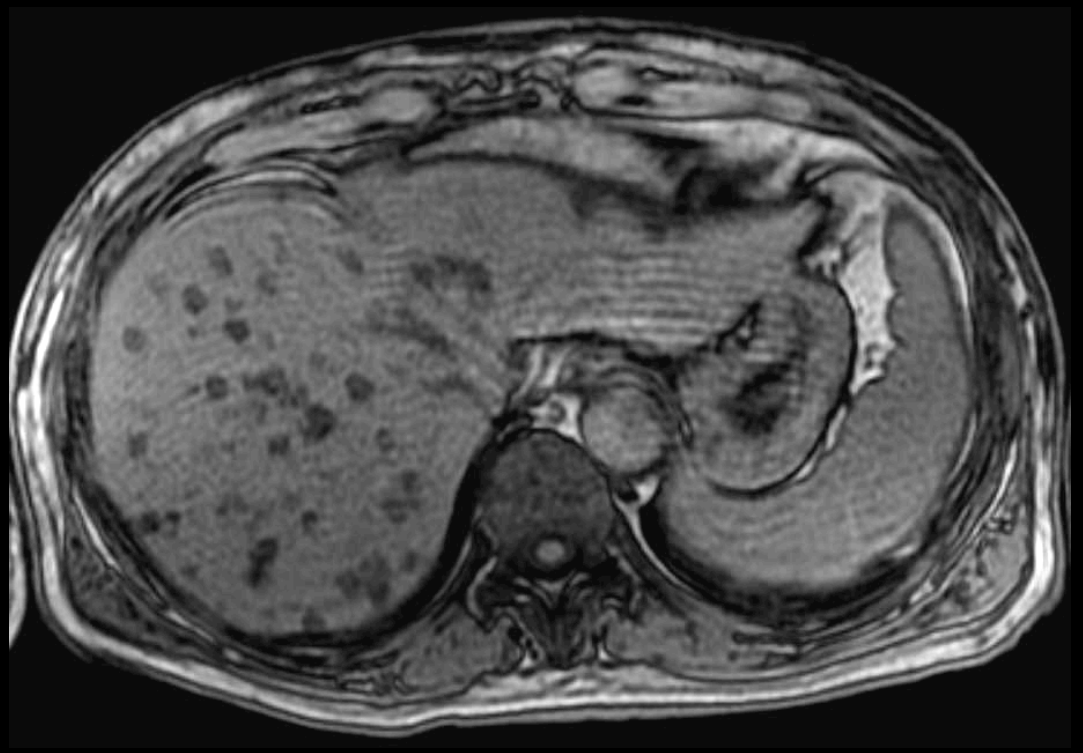
Ax T2 FS



Ax T1 Gd FS



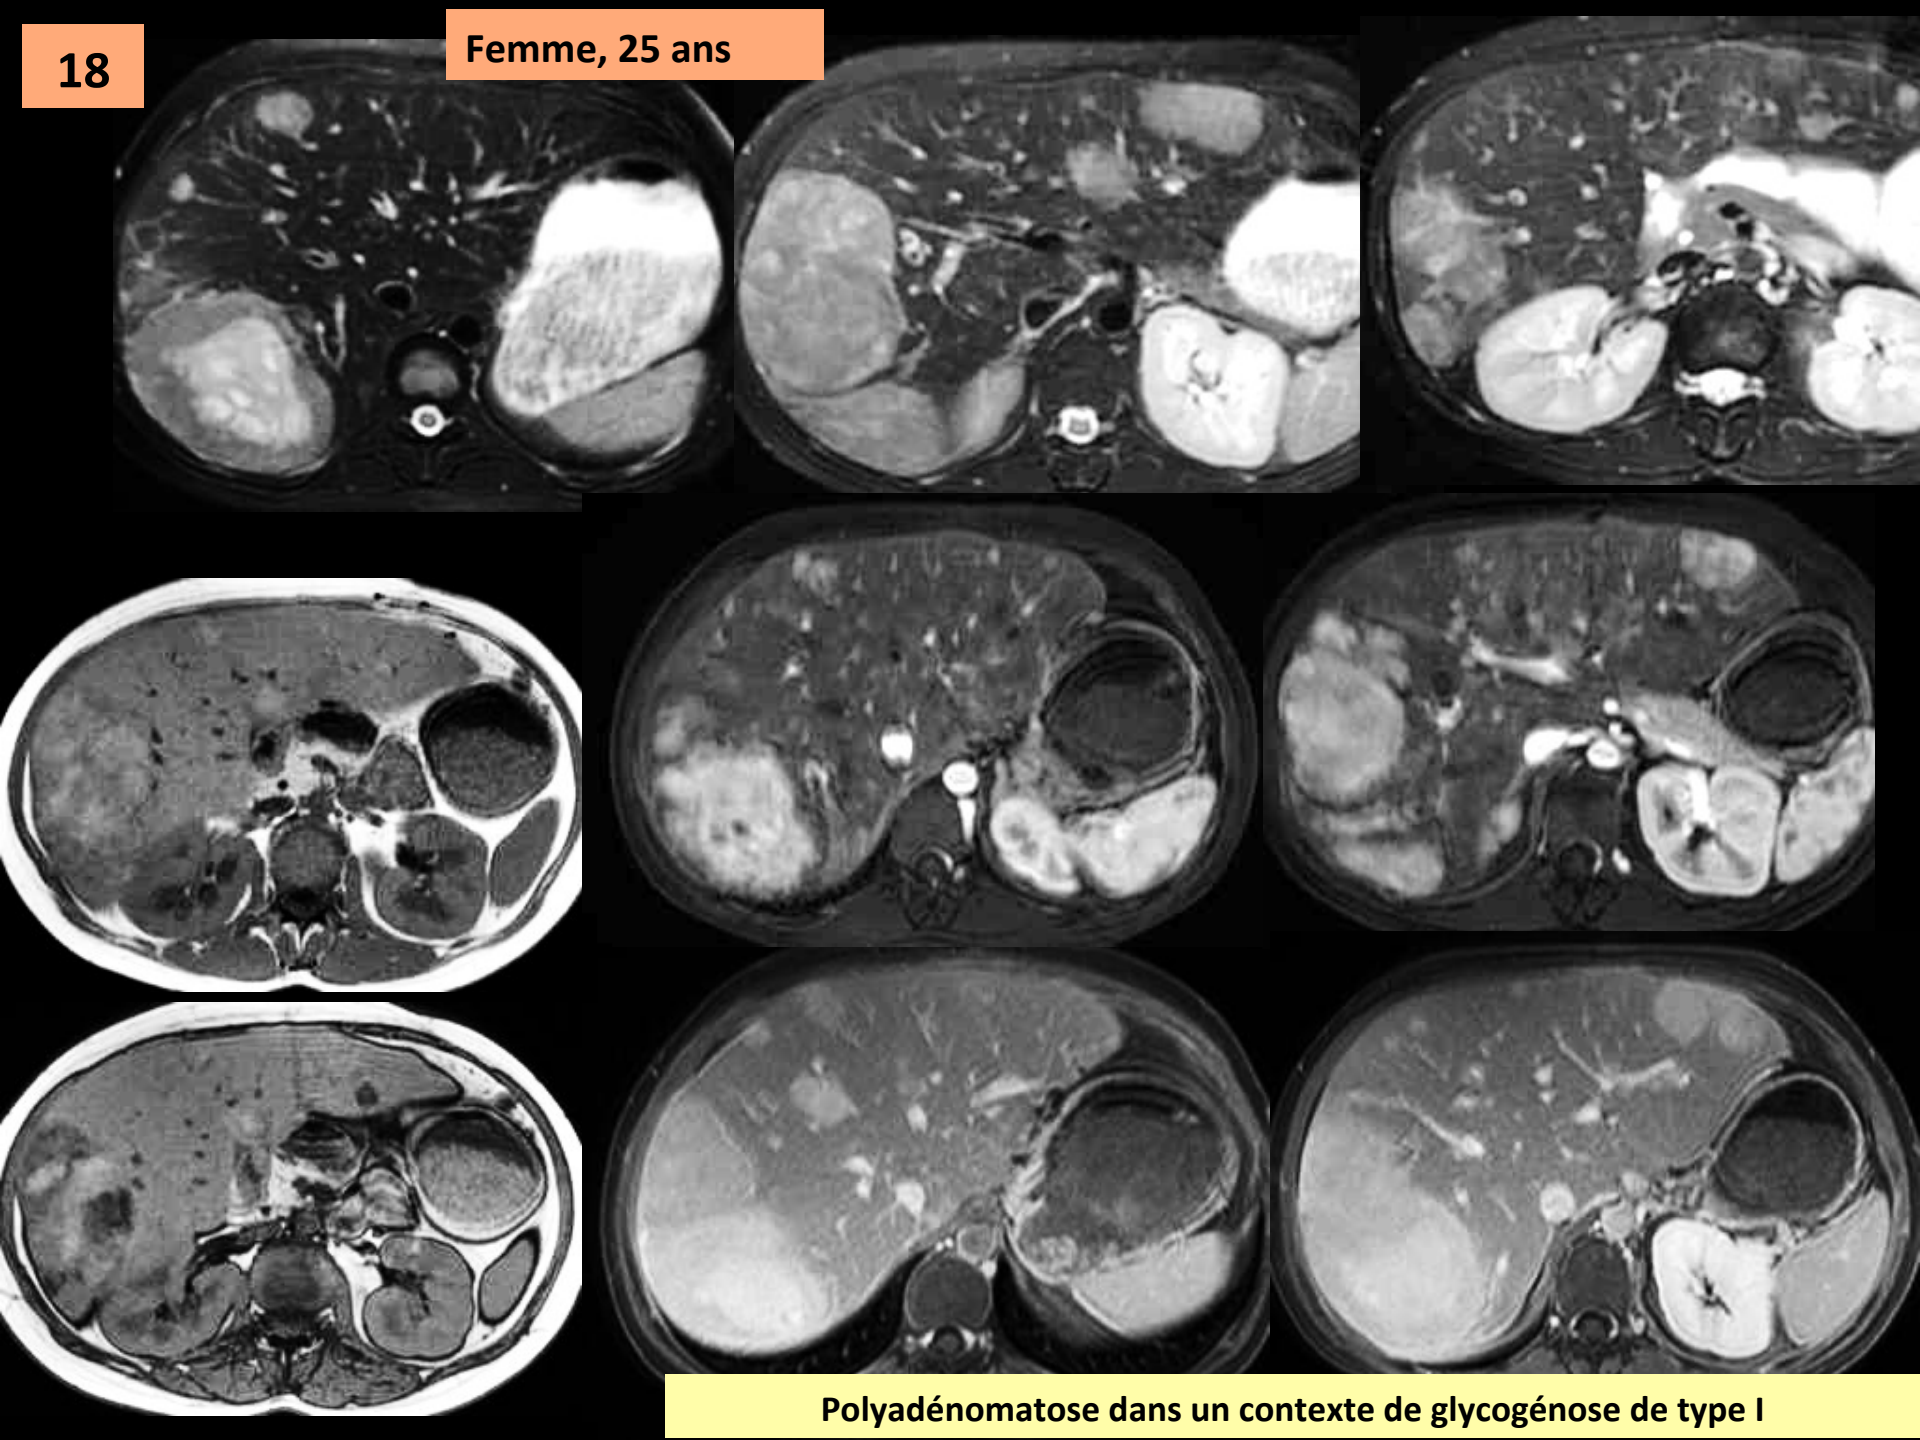
Ax IP/OP



Stéatose nodulaire multifocale

18

Femme, 25 ans



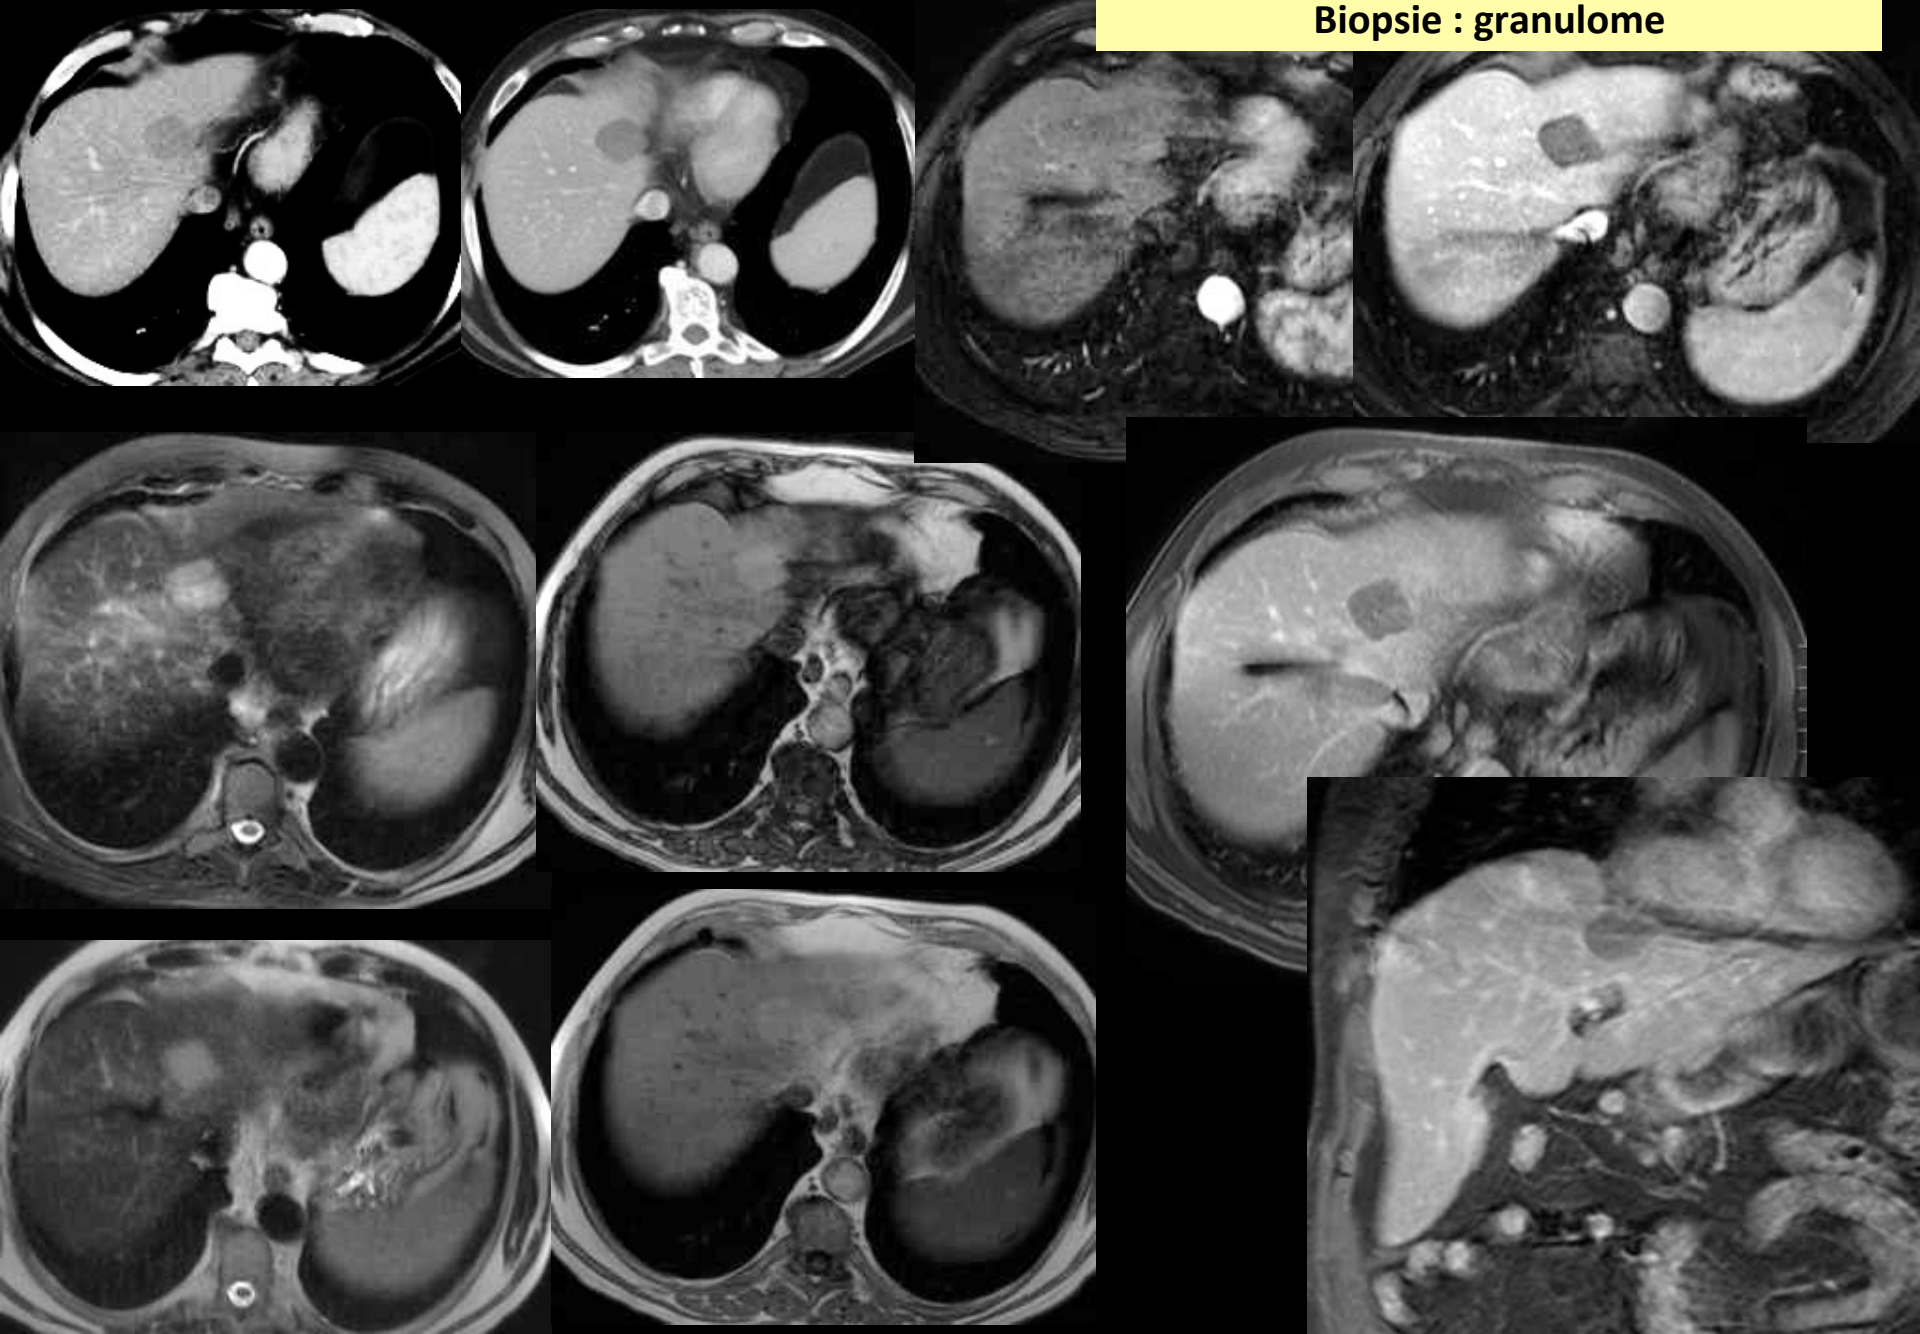
Polyadénomatose dans un contexte de glycogénose de type I

19

homme, cirrhose , 55 ans

Lésion amorphe / atcd sarcoïdose

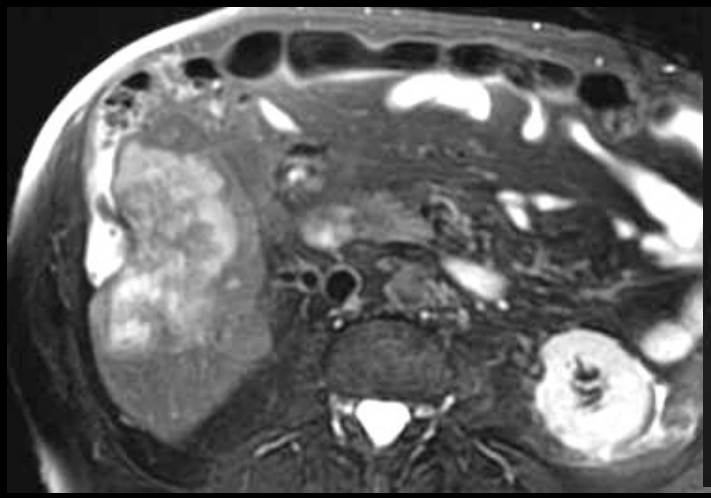
Biopsie : granulome

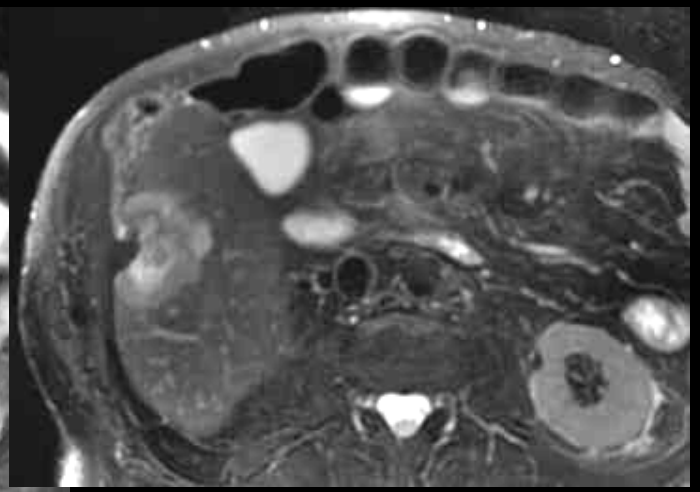


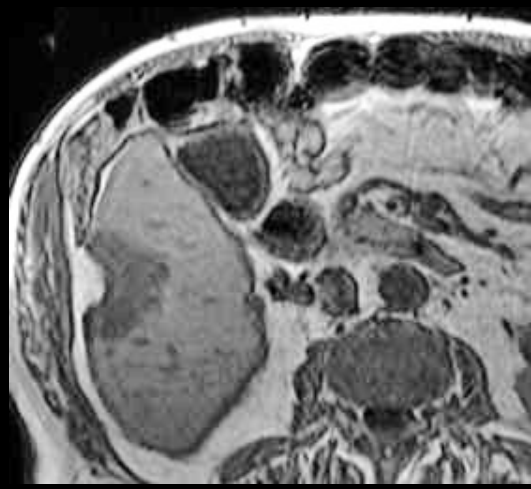
20

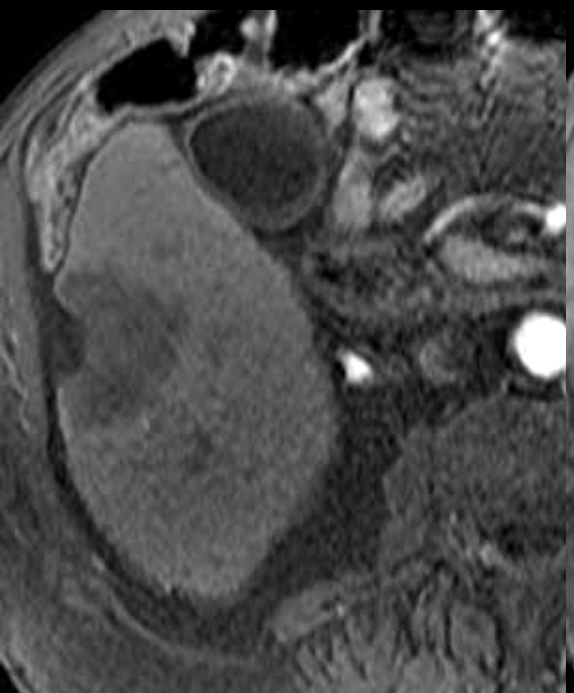
homme, 85 ans

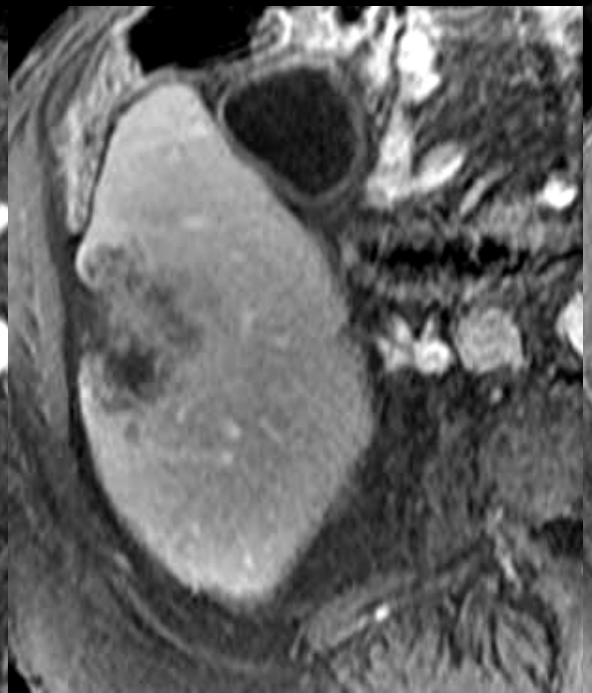
Cholangiocarcinome intra hépatique

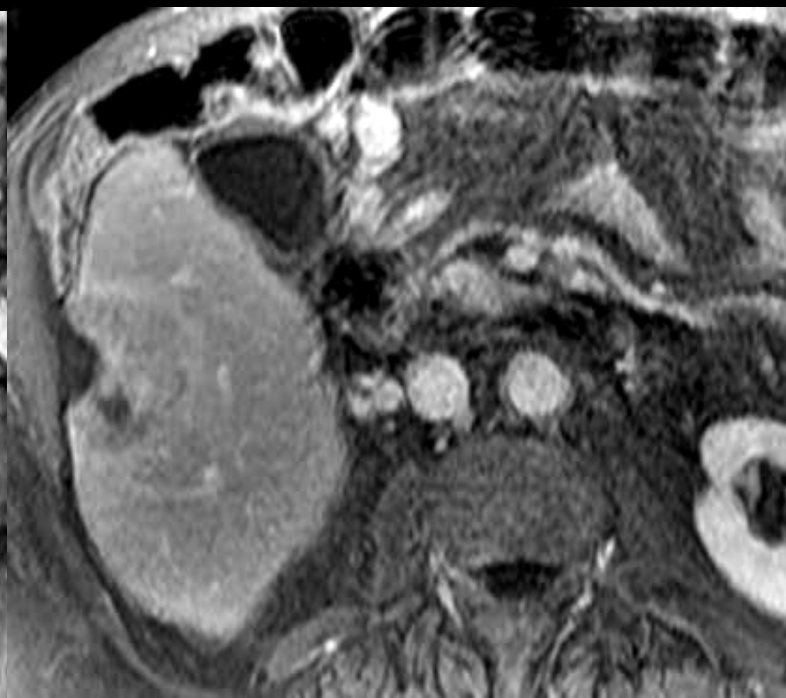








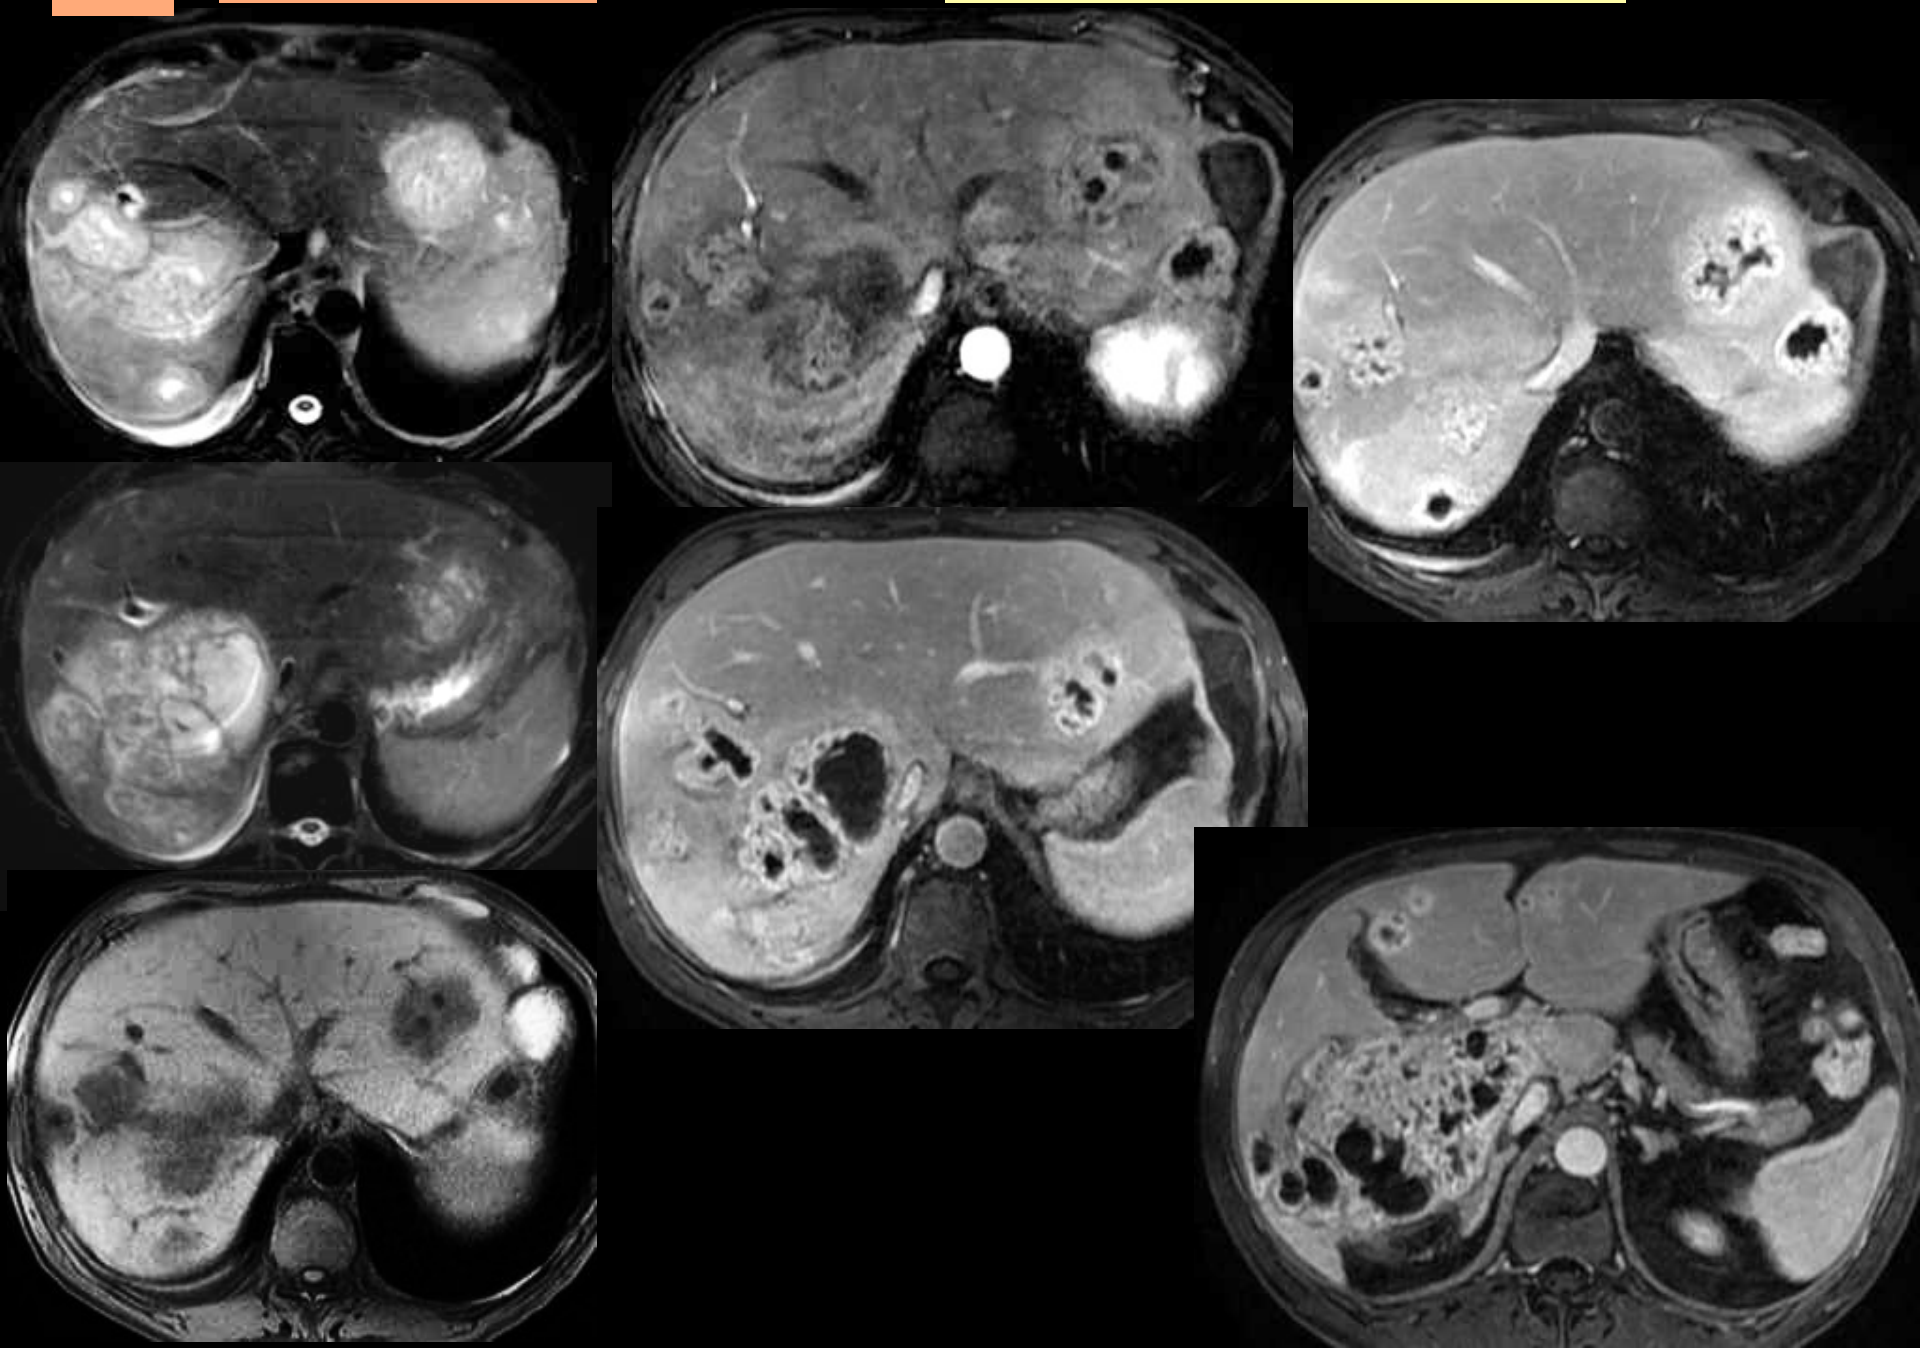




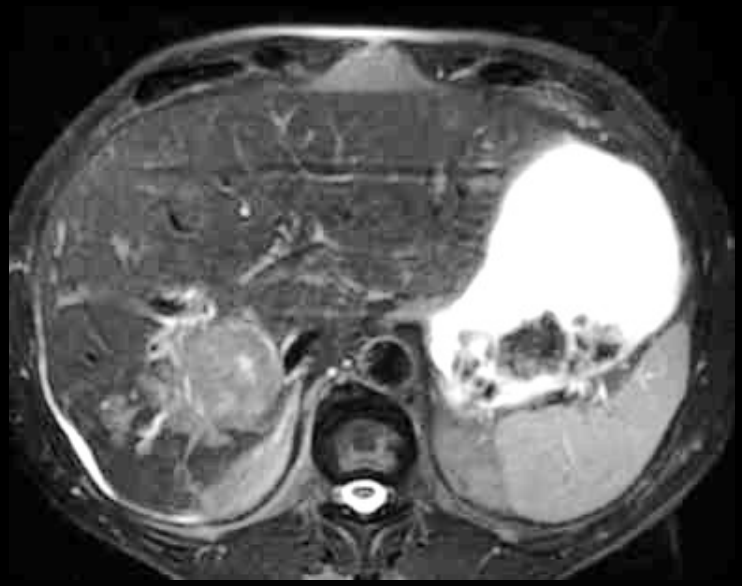
21

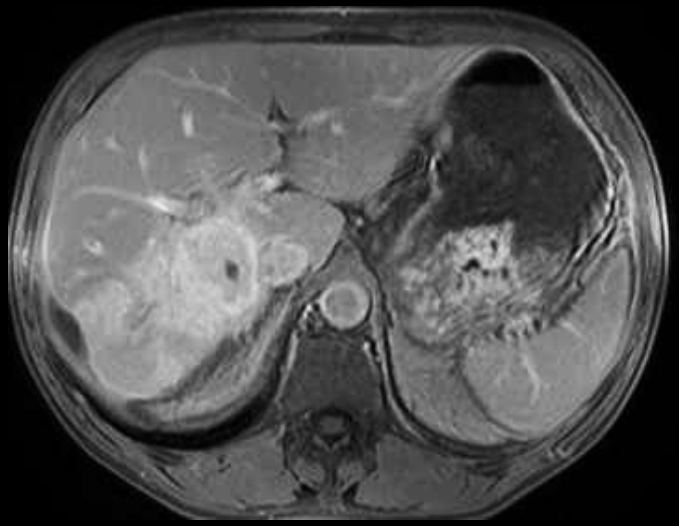
homme, 45 ans

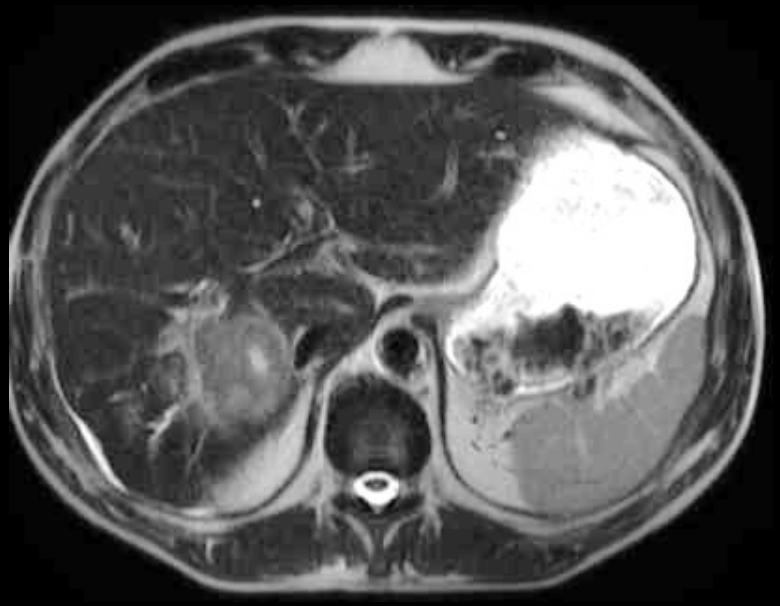
Abcès à pyogènes

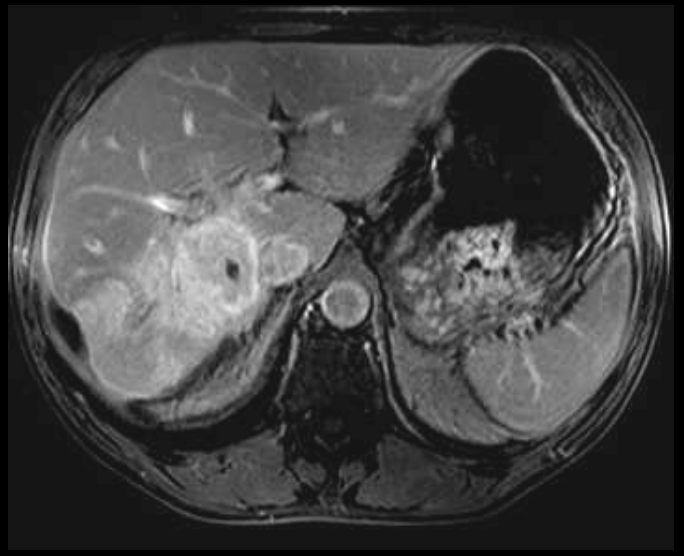


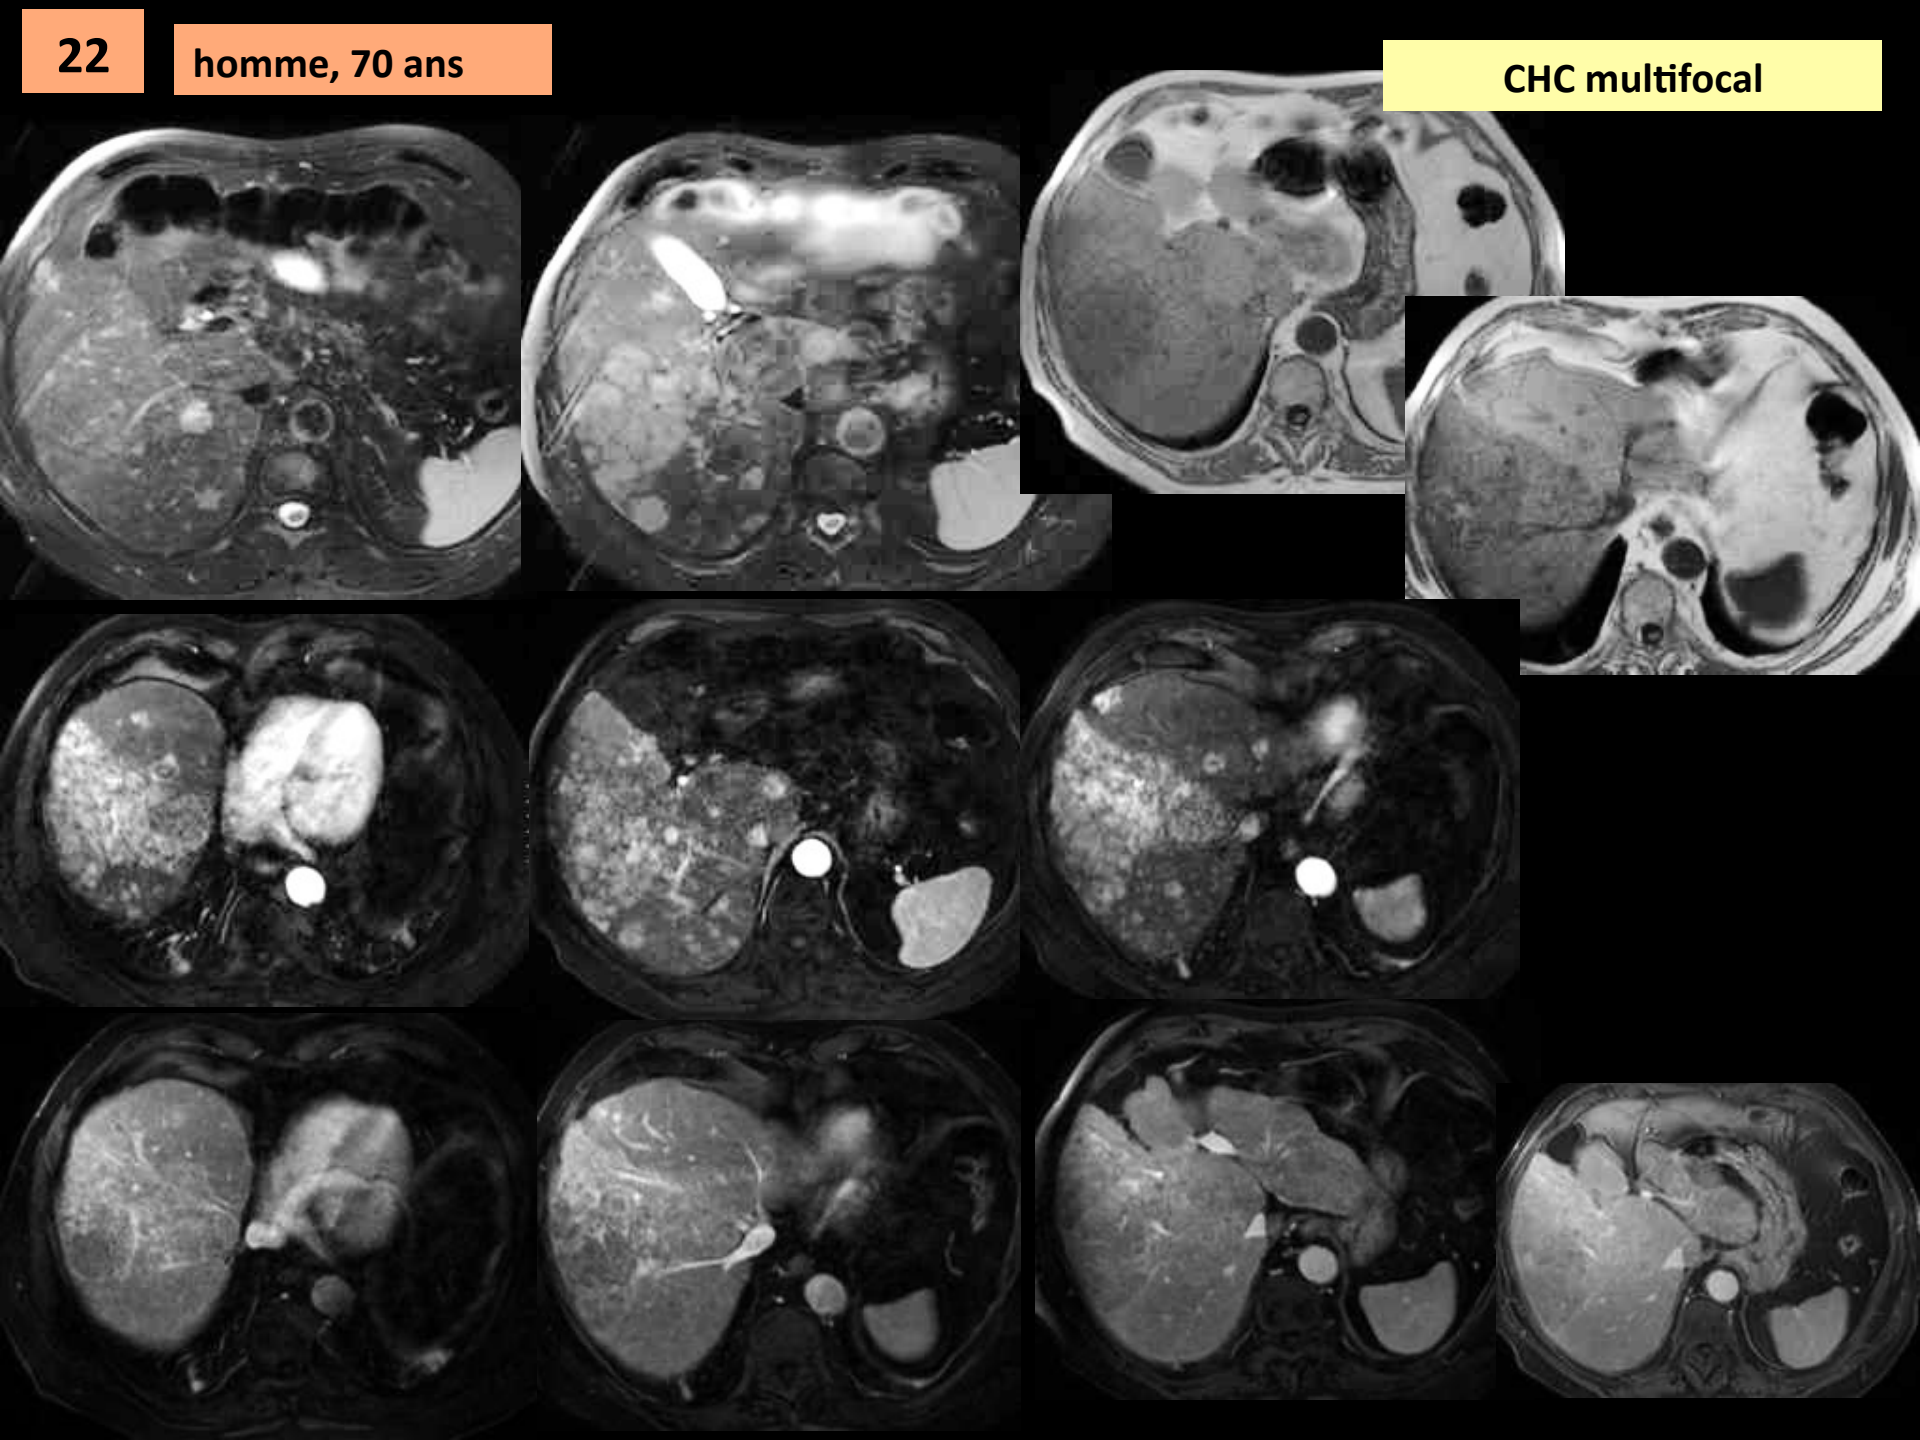
Contrôle à 2 mois







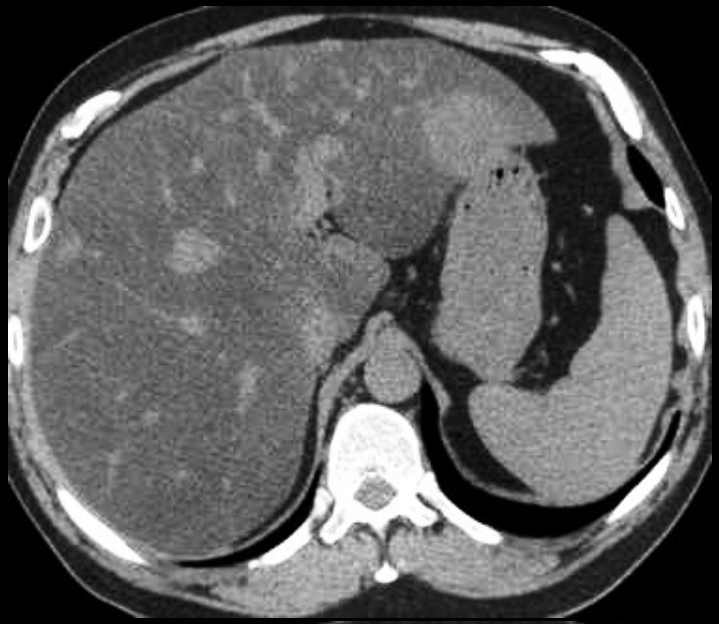


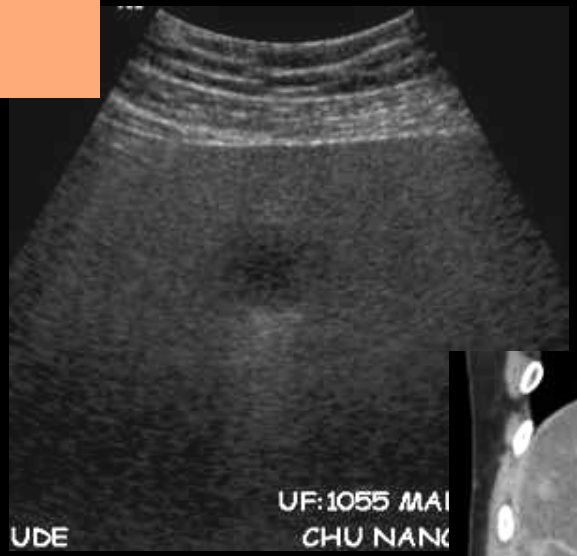


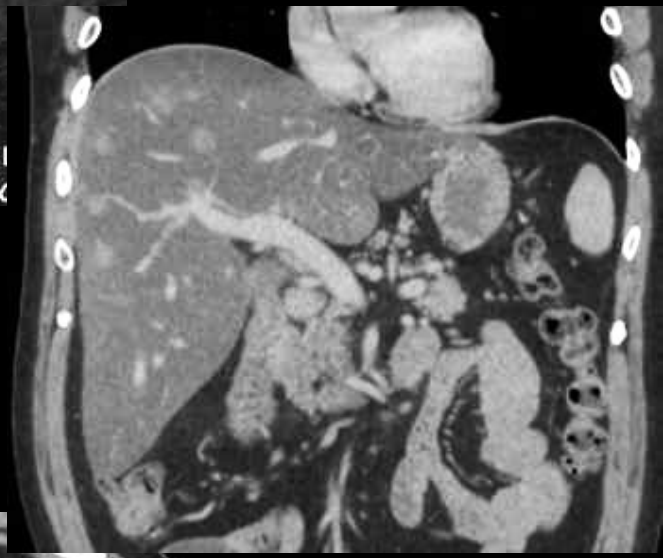
22
homme, 70 ans
CHC multifocal

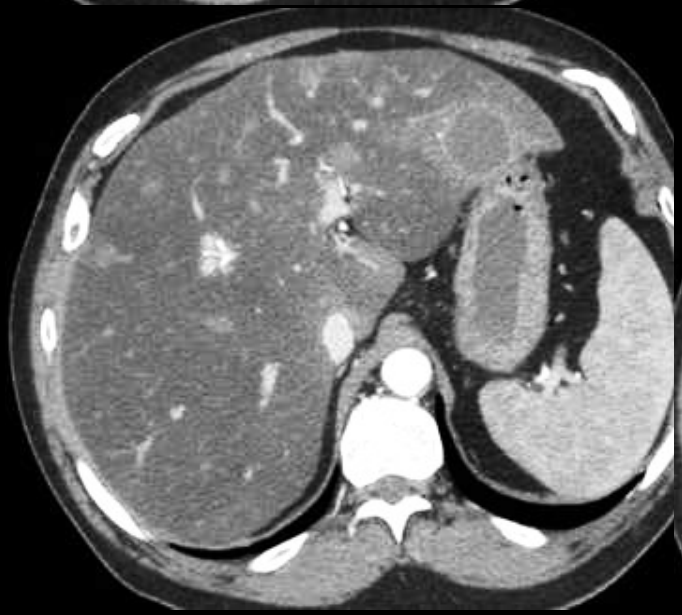
23

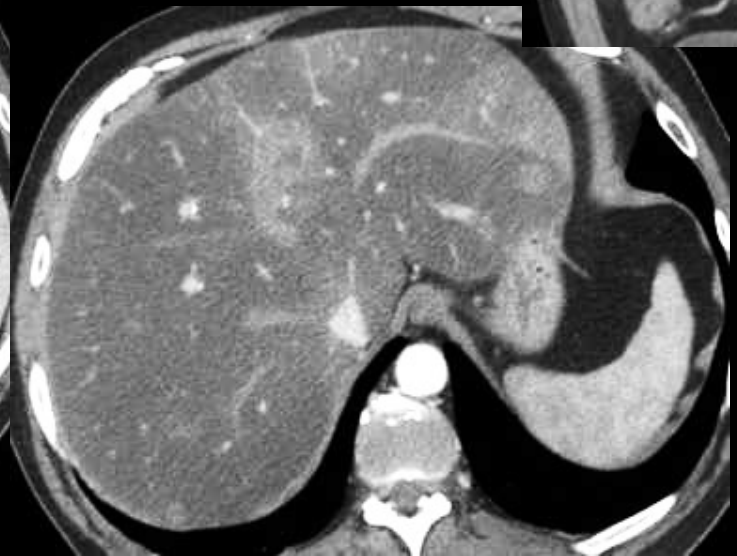
Homme 45 ans fièvre et perte de poids
Ancien toxicomane

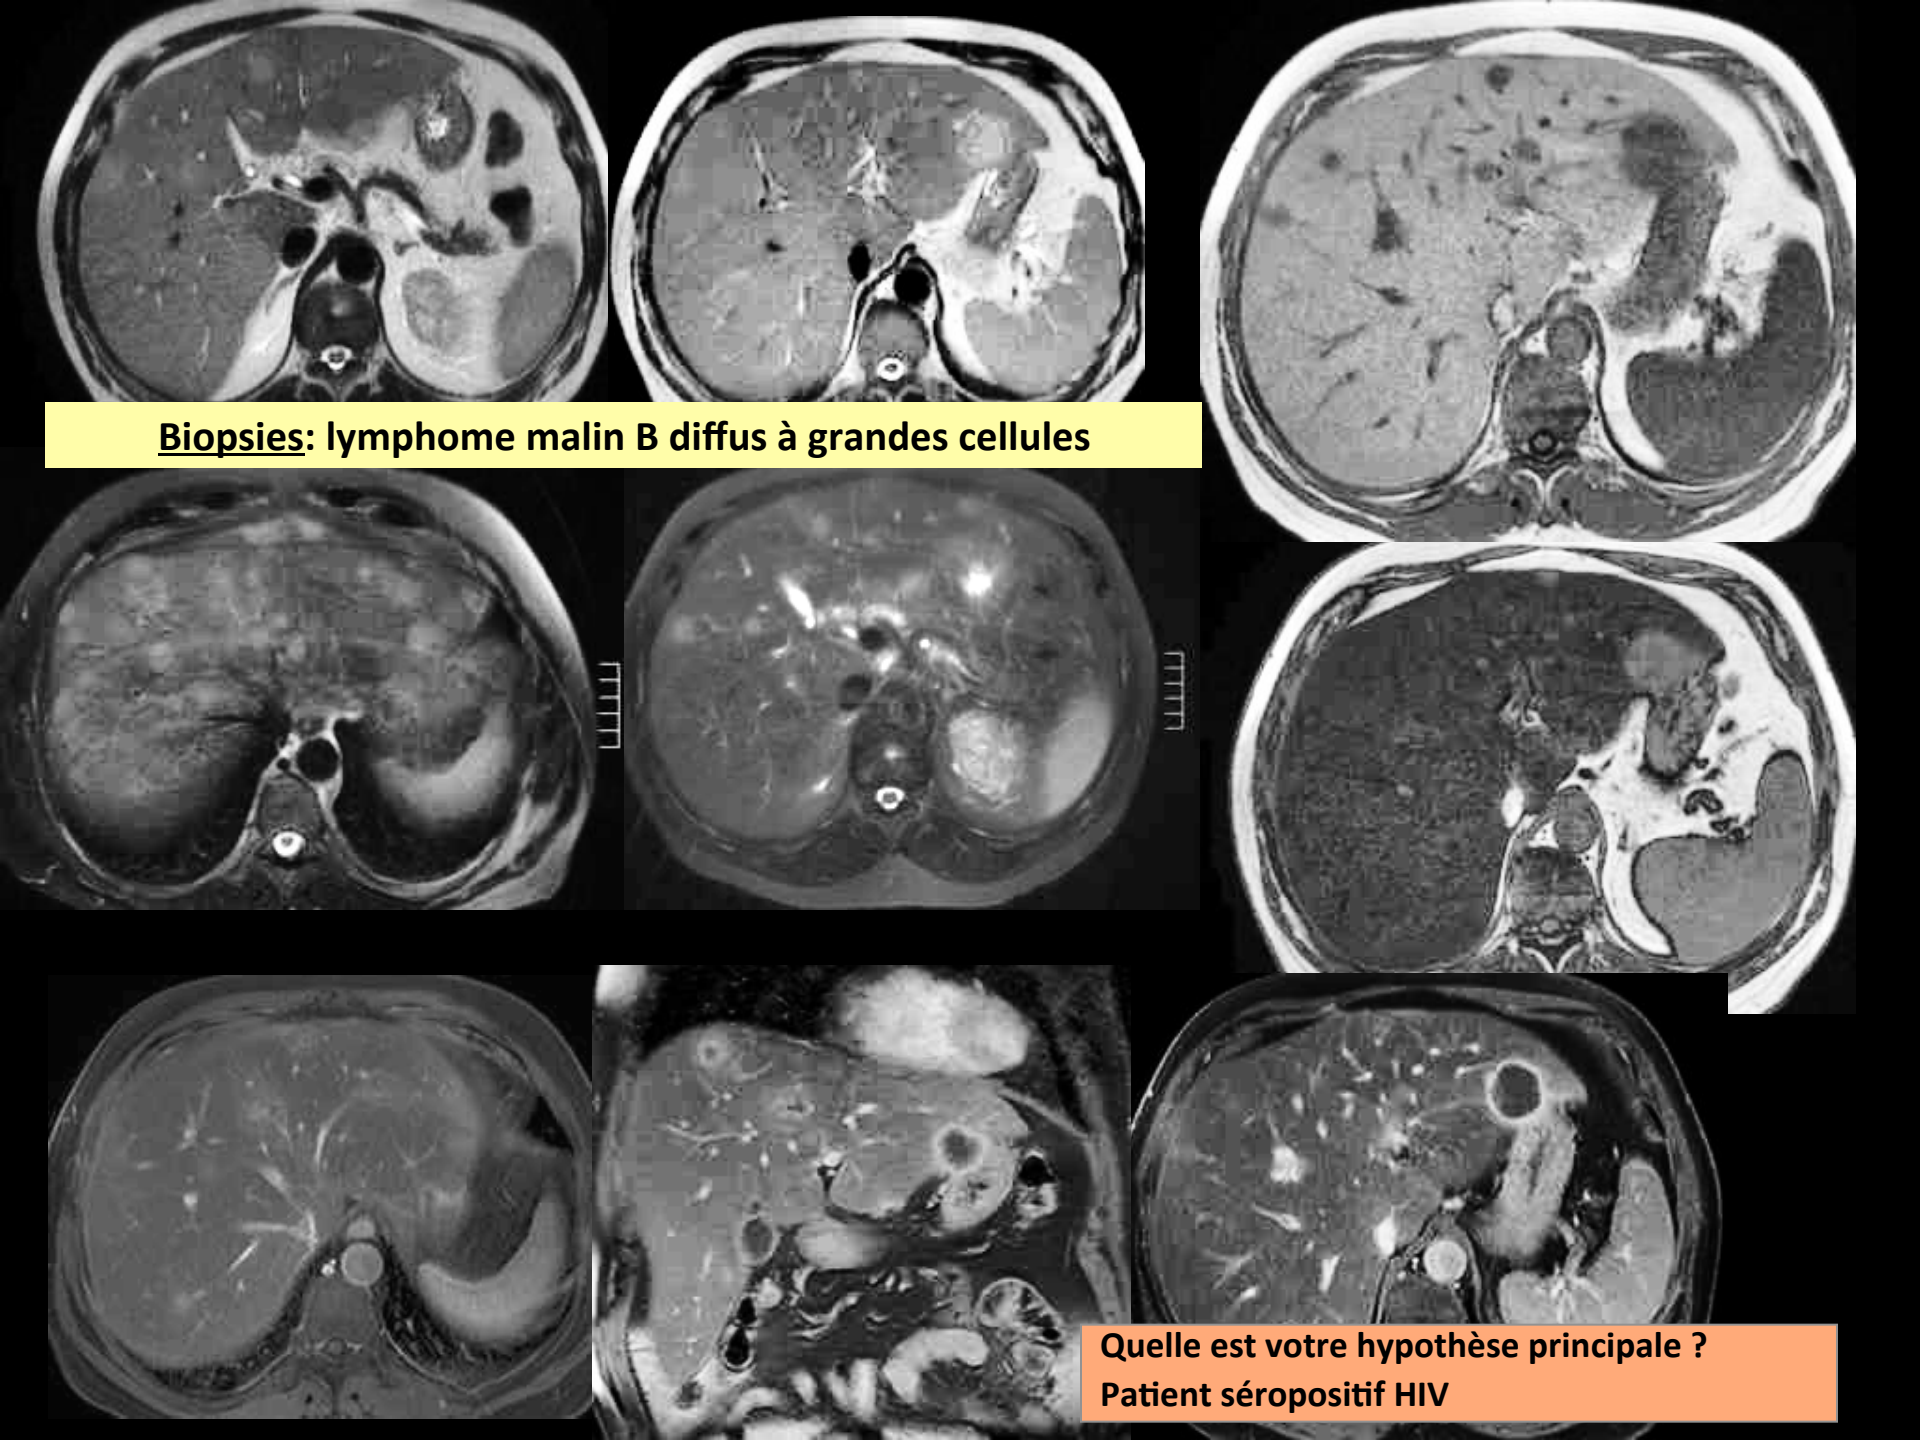












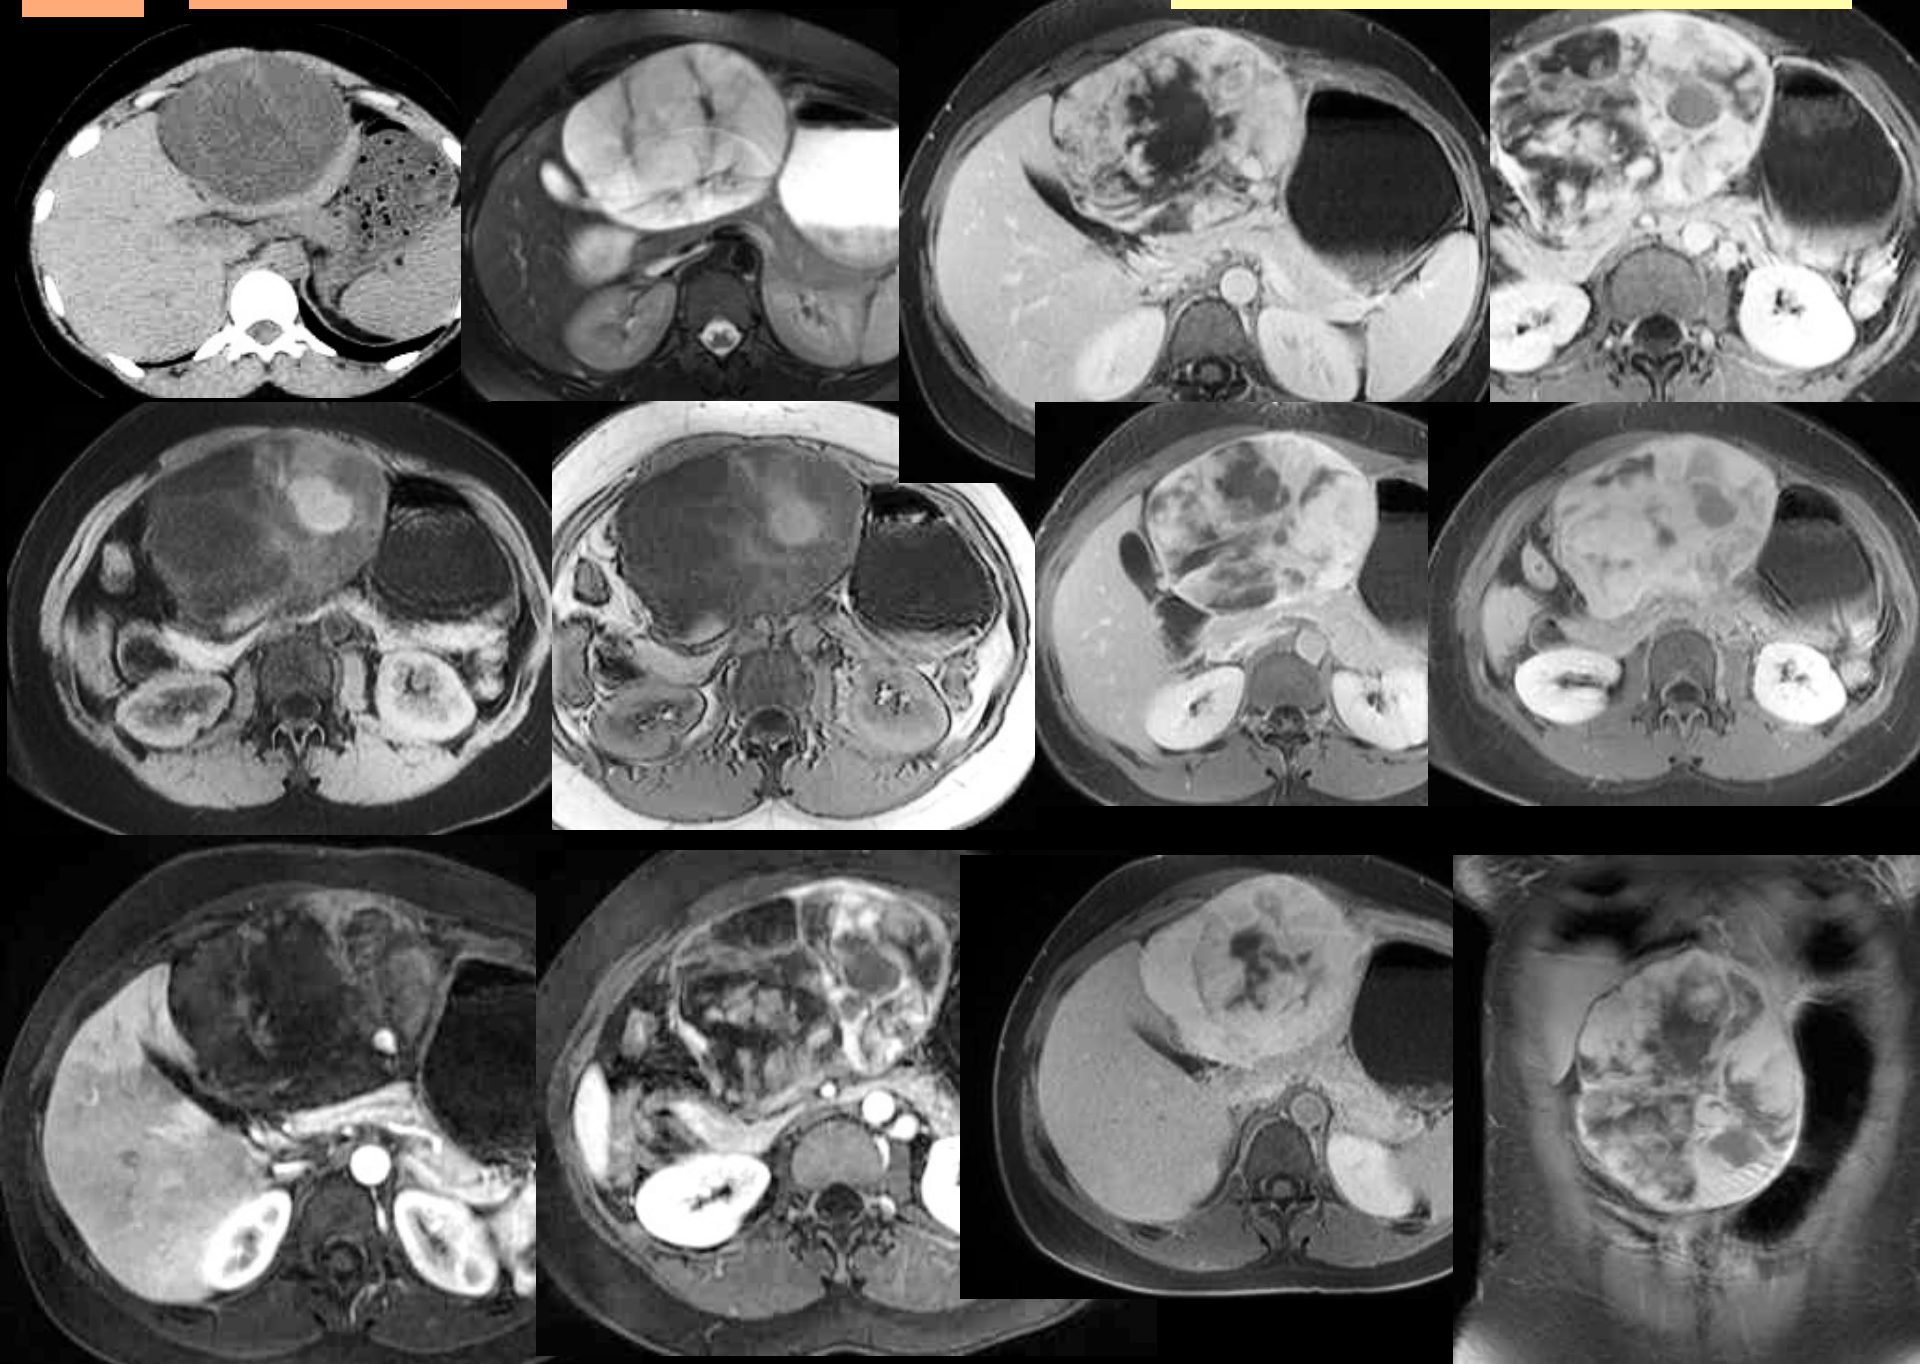
Biopsies: lymphome malin B diffus à grandes cellules

Quelle est votre hypothèse principale ?
Patient séropositif HIV

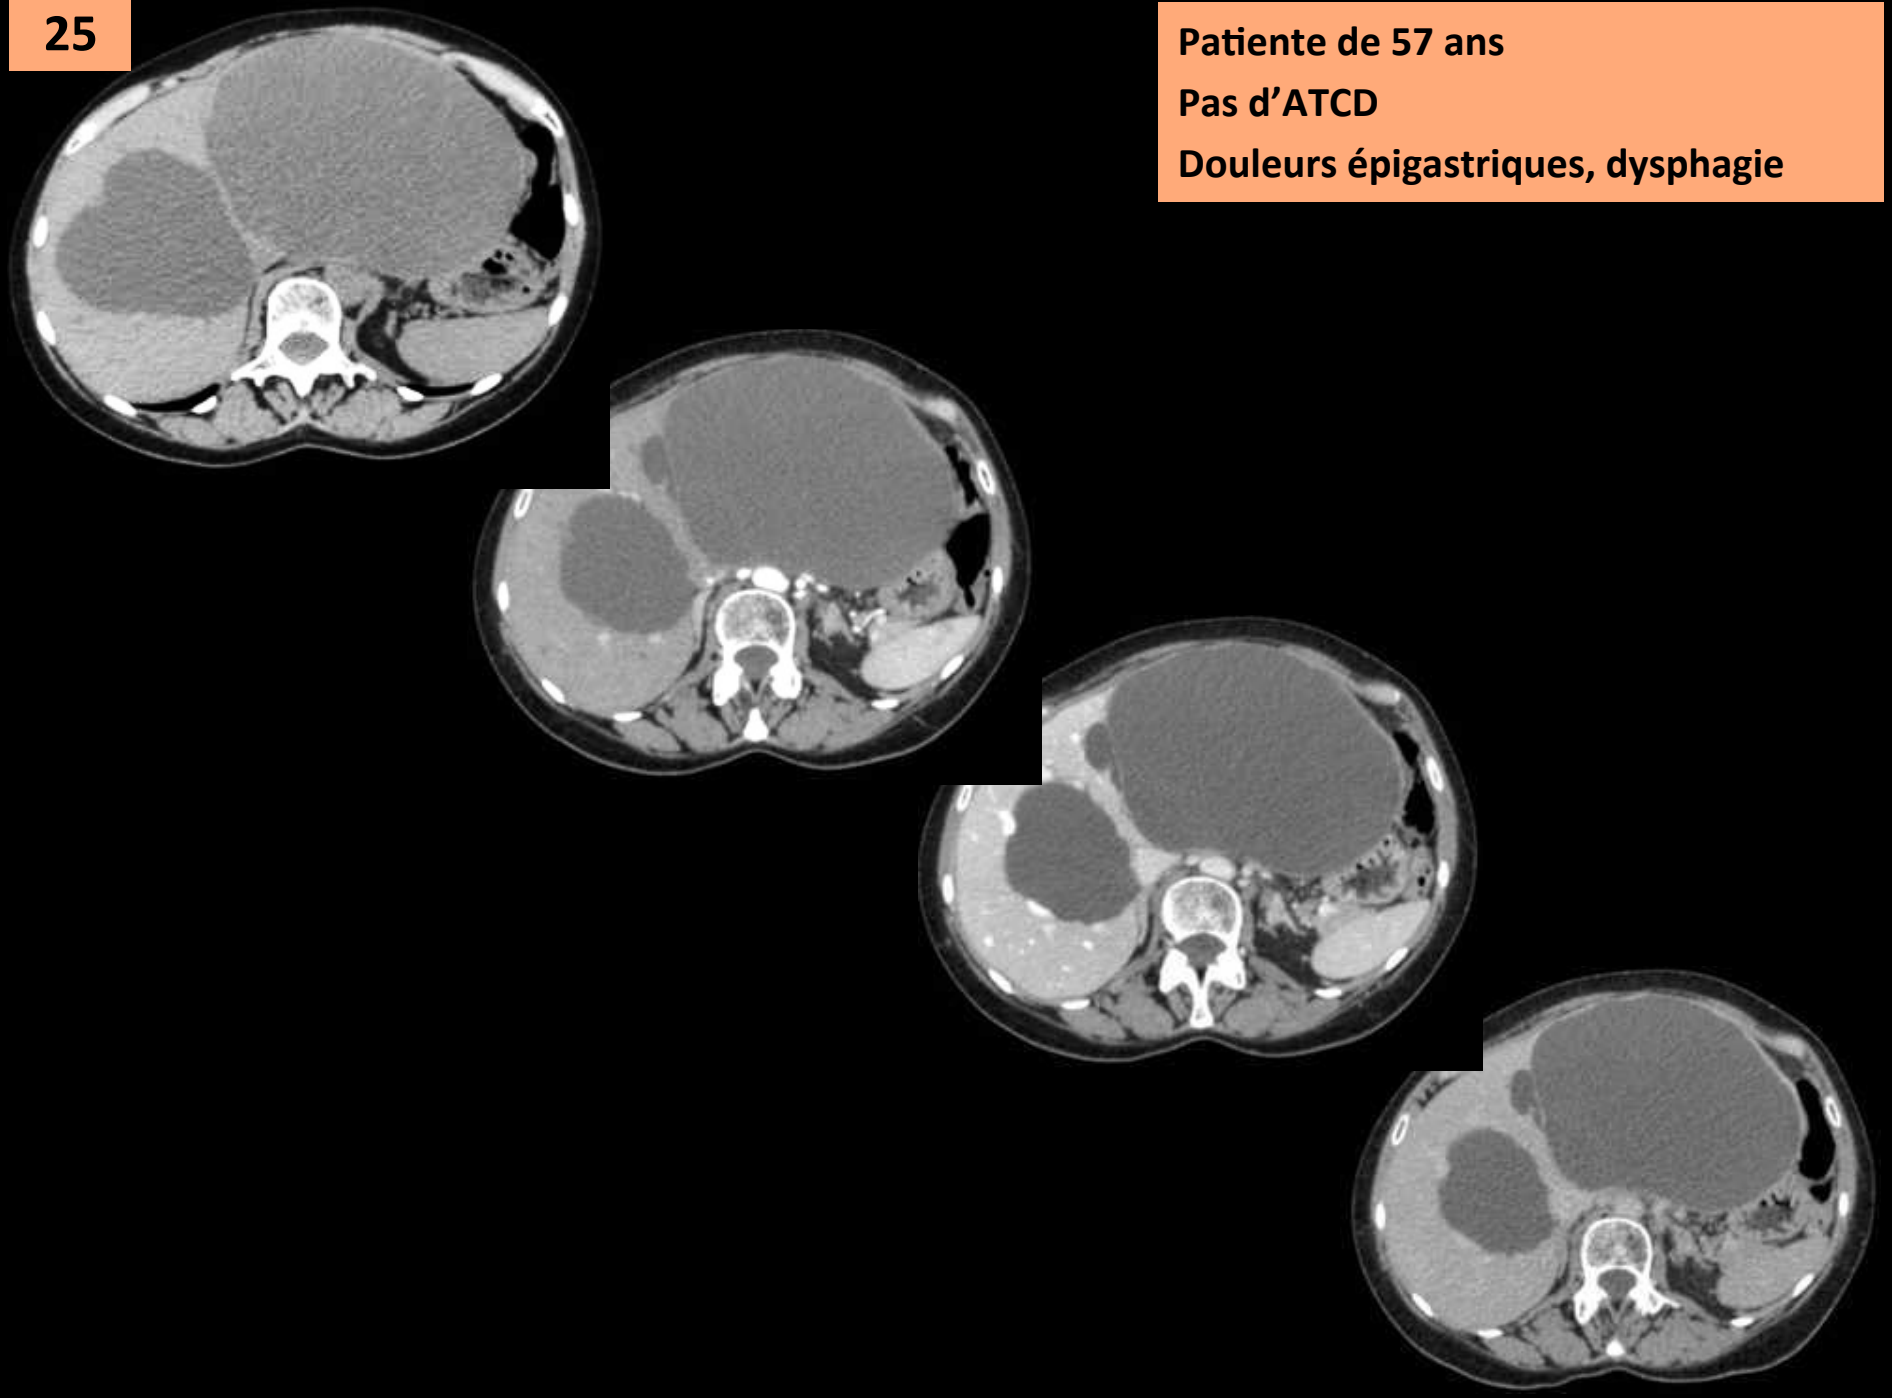
24

Femme, 25 ans

Sarcome myxoïde du ligt rond



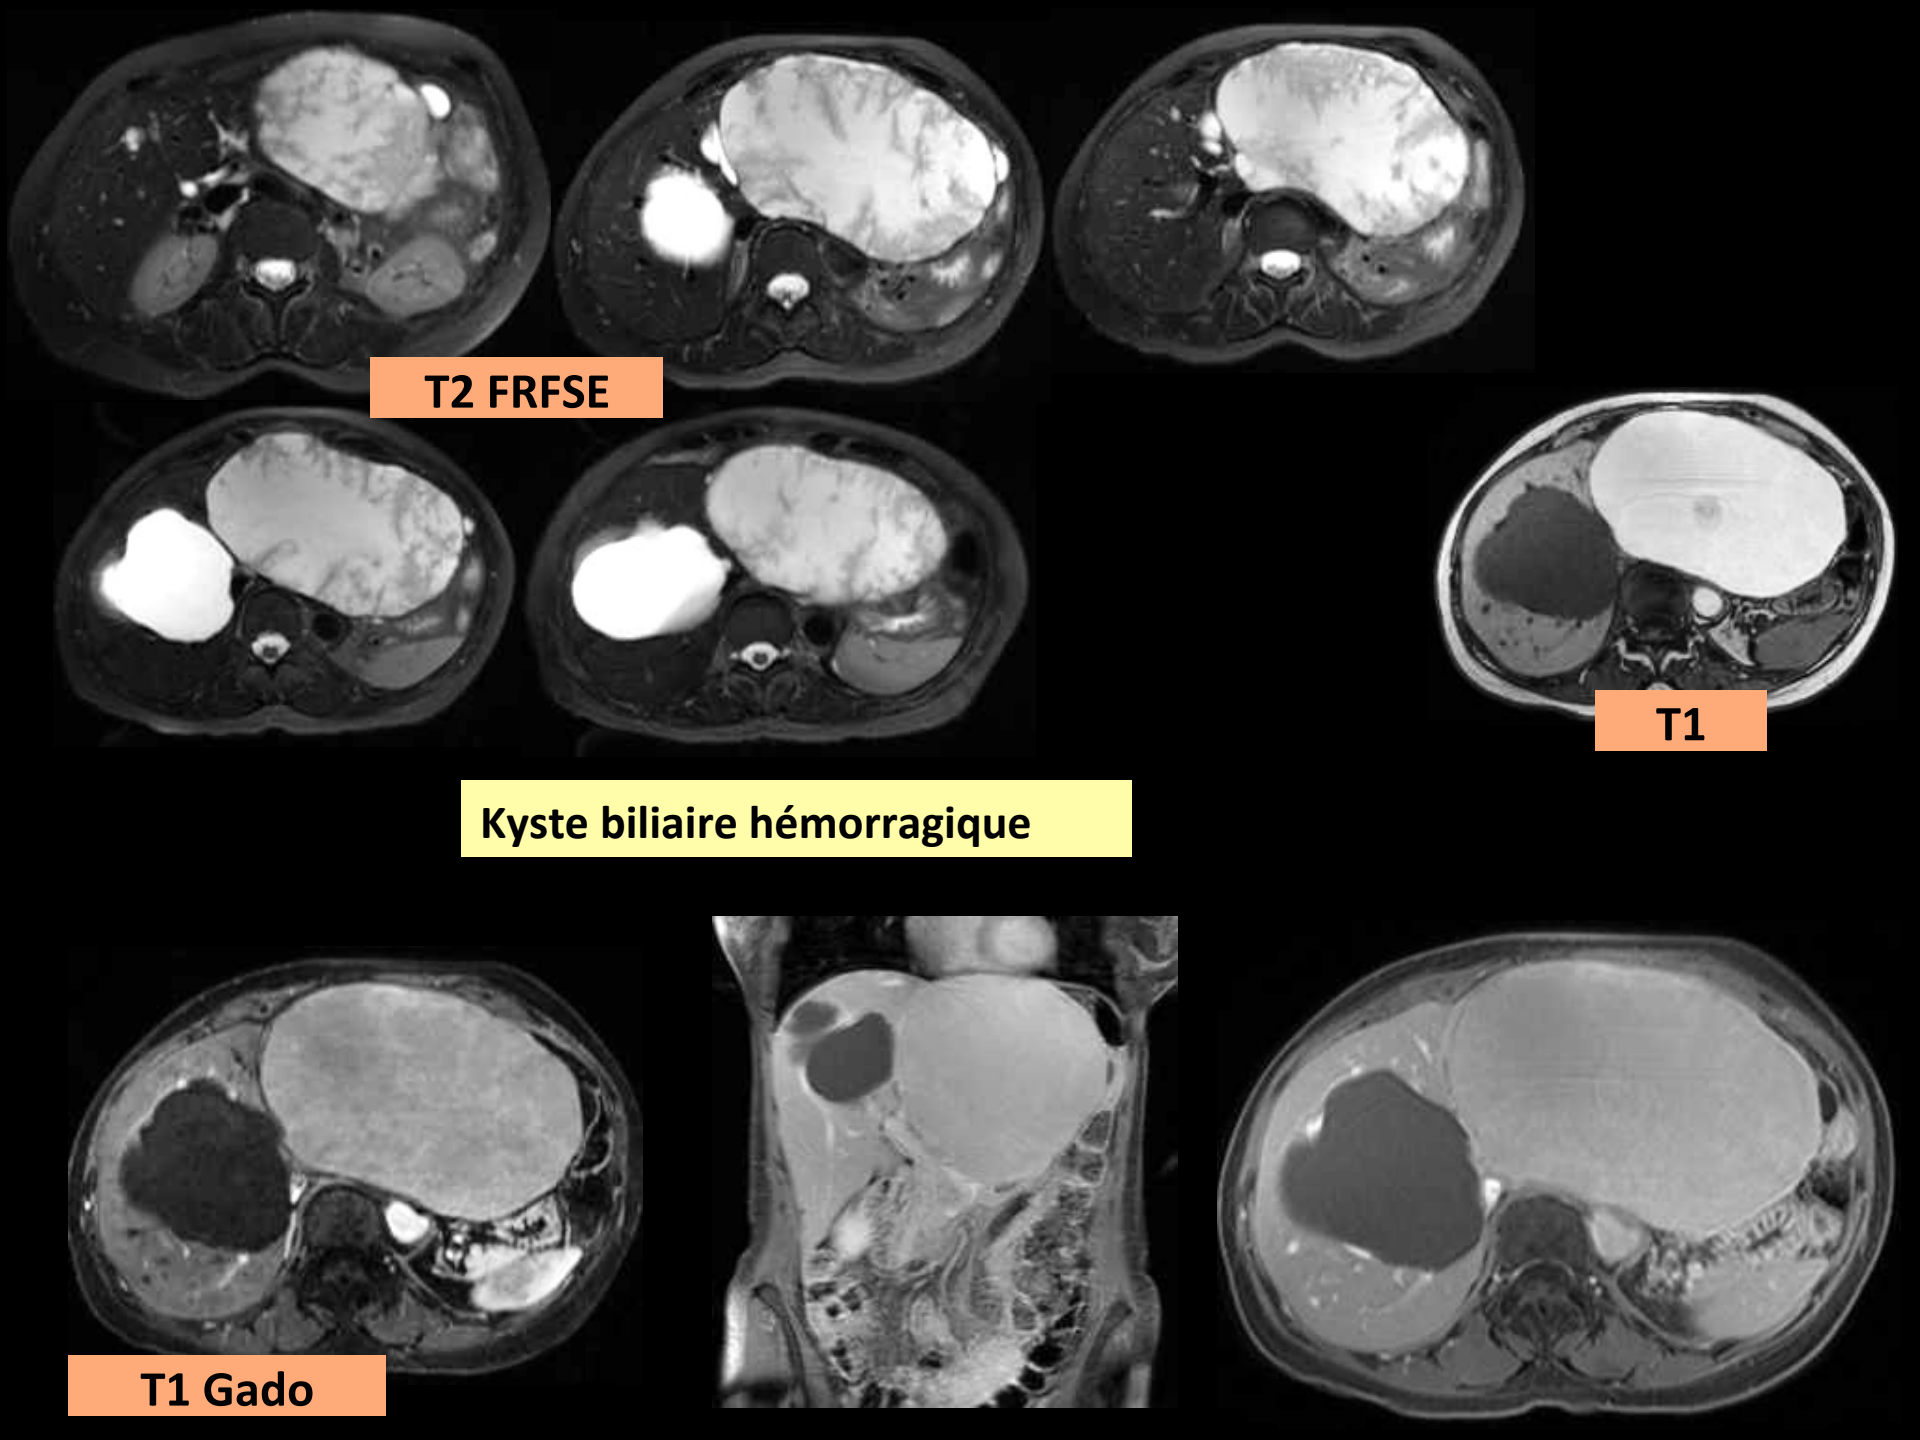
25



Patiente de 57 ans

Pas d'ATCD

Douleurs épigastriques, dysphagie



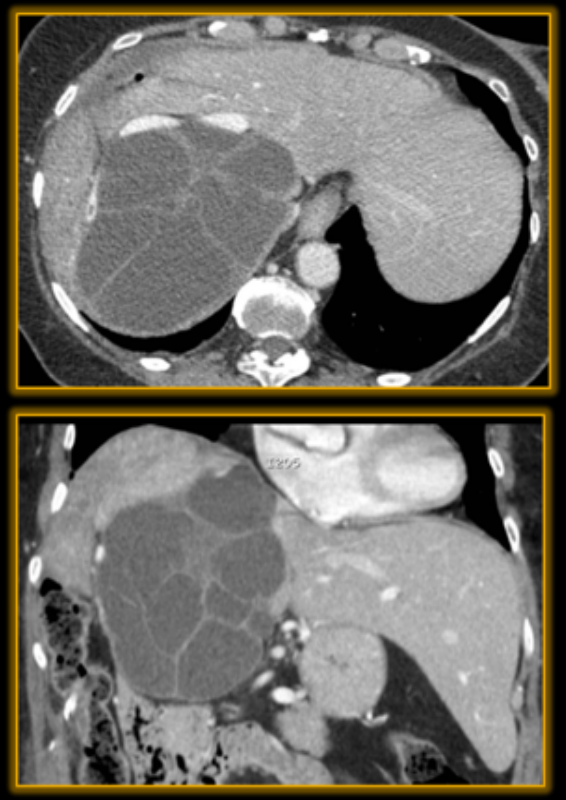
T2 FRFSE
T1
Kyste biliaire hémorragique
T1 Gado

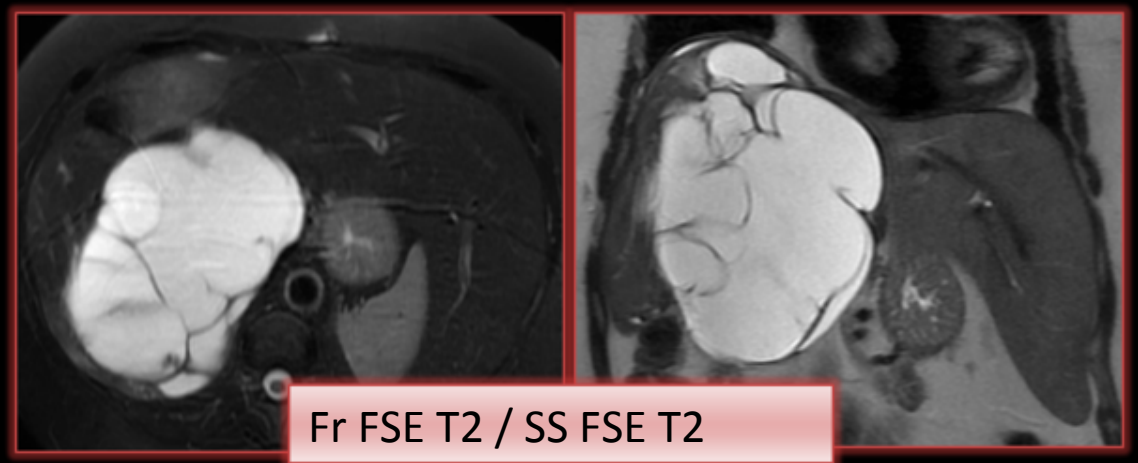
26

Femme de 53 ans

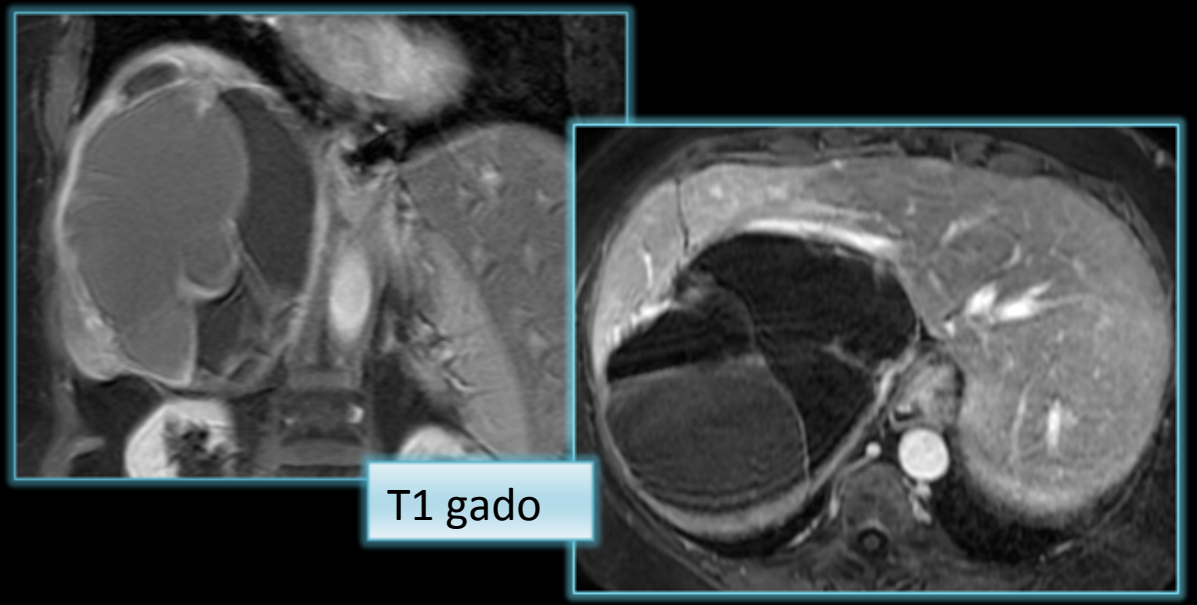
Douleurs épigastriques chroniques non fébriles

Cystadénome biliaire





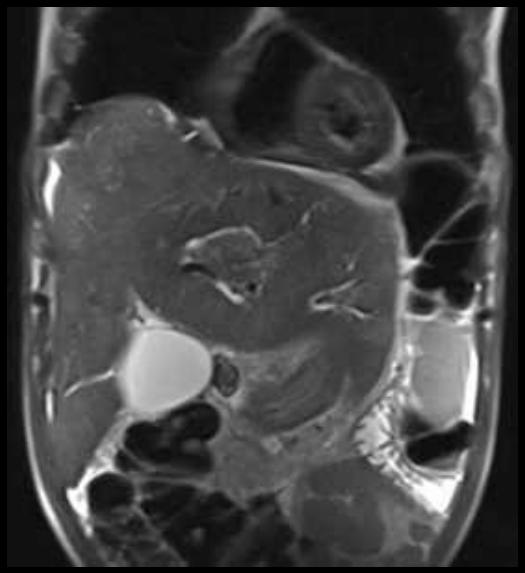
Fr FSE T2 / SS FSE T2

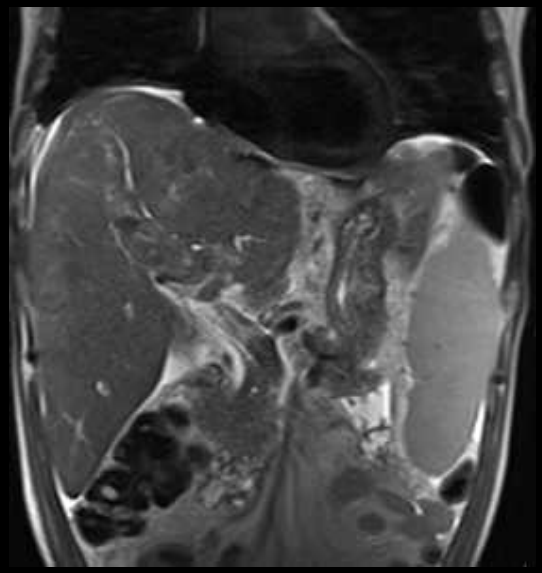


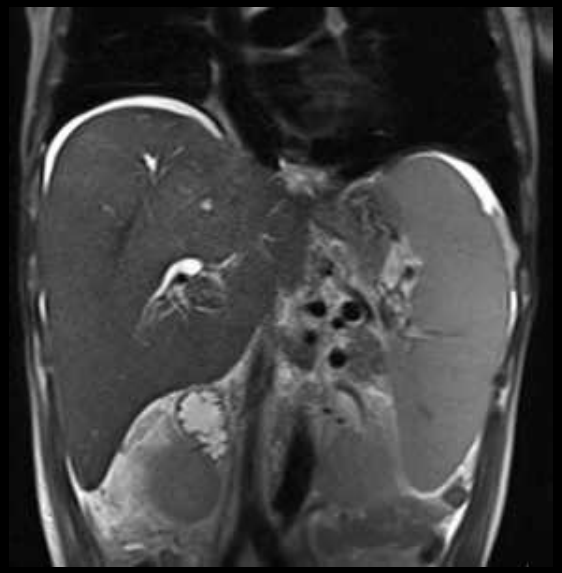
T1 gado

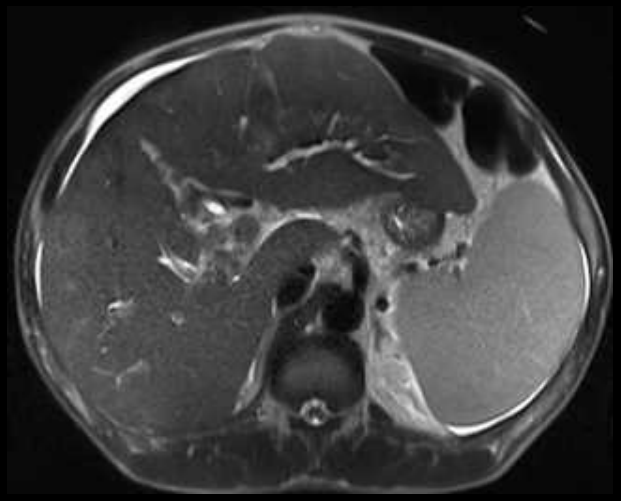
27

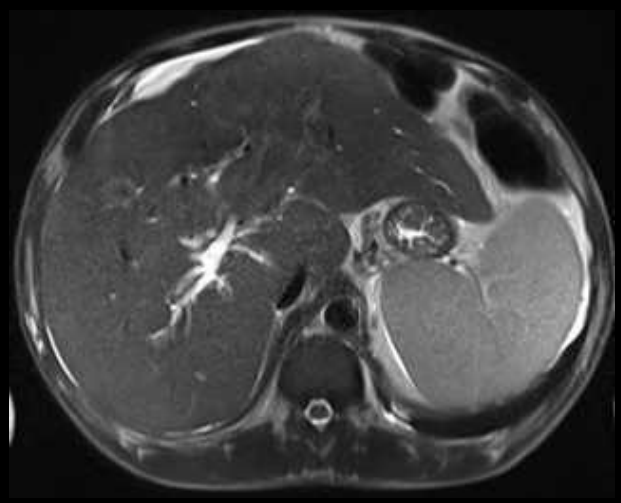
Homme de 53 ans. Douleurs épigastriques, fébricule, ascite et AEG

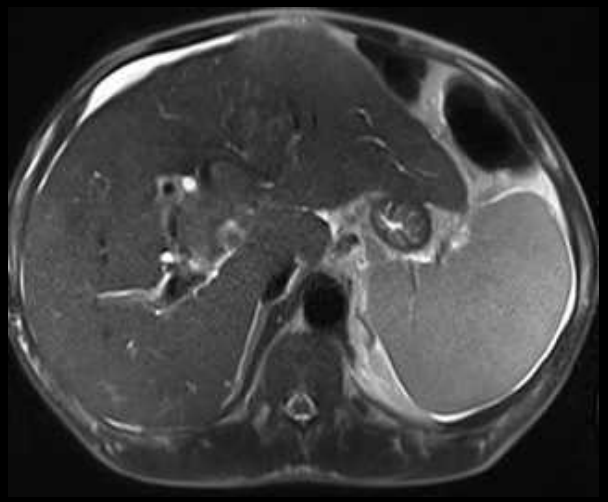


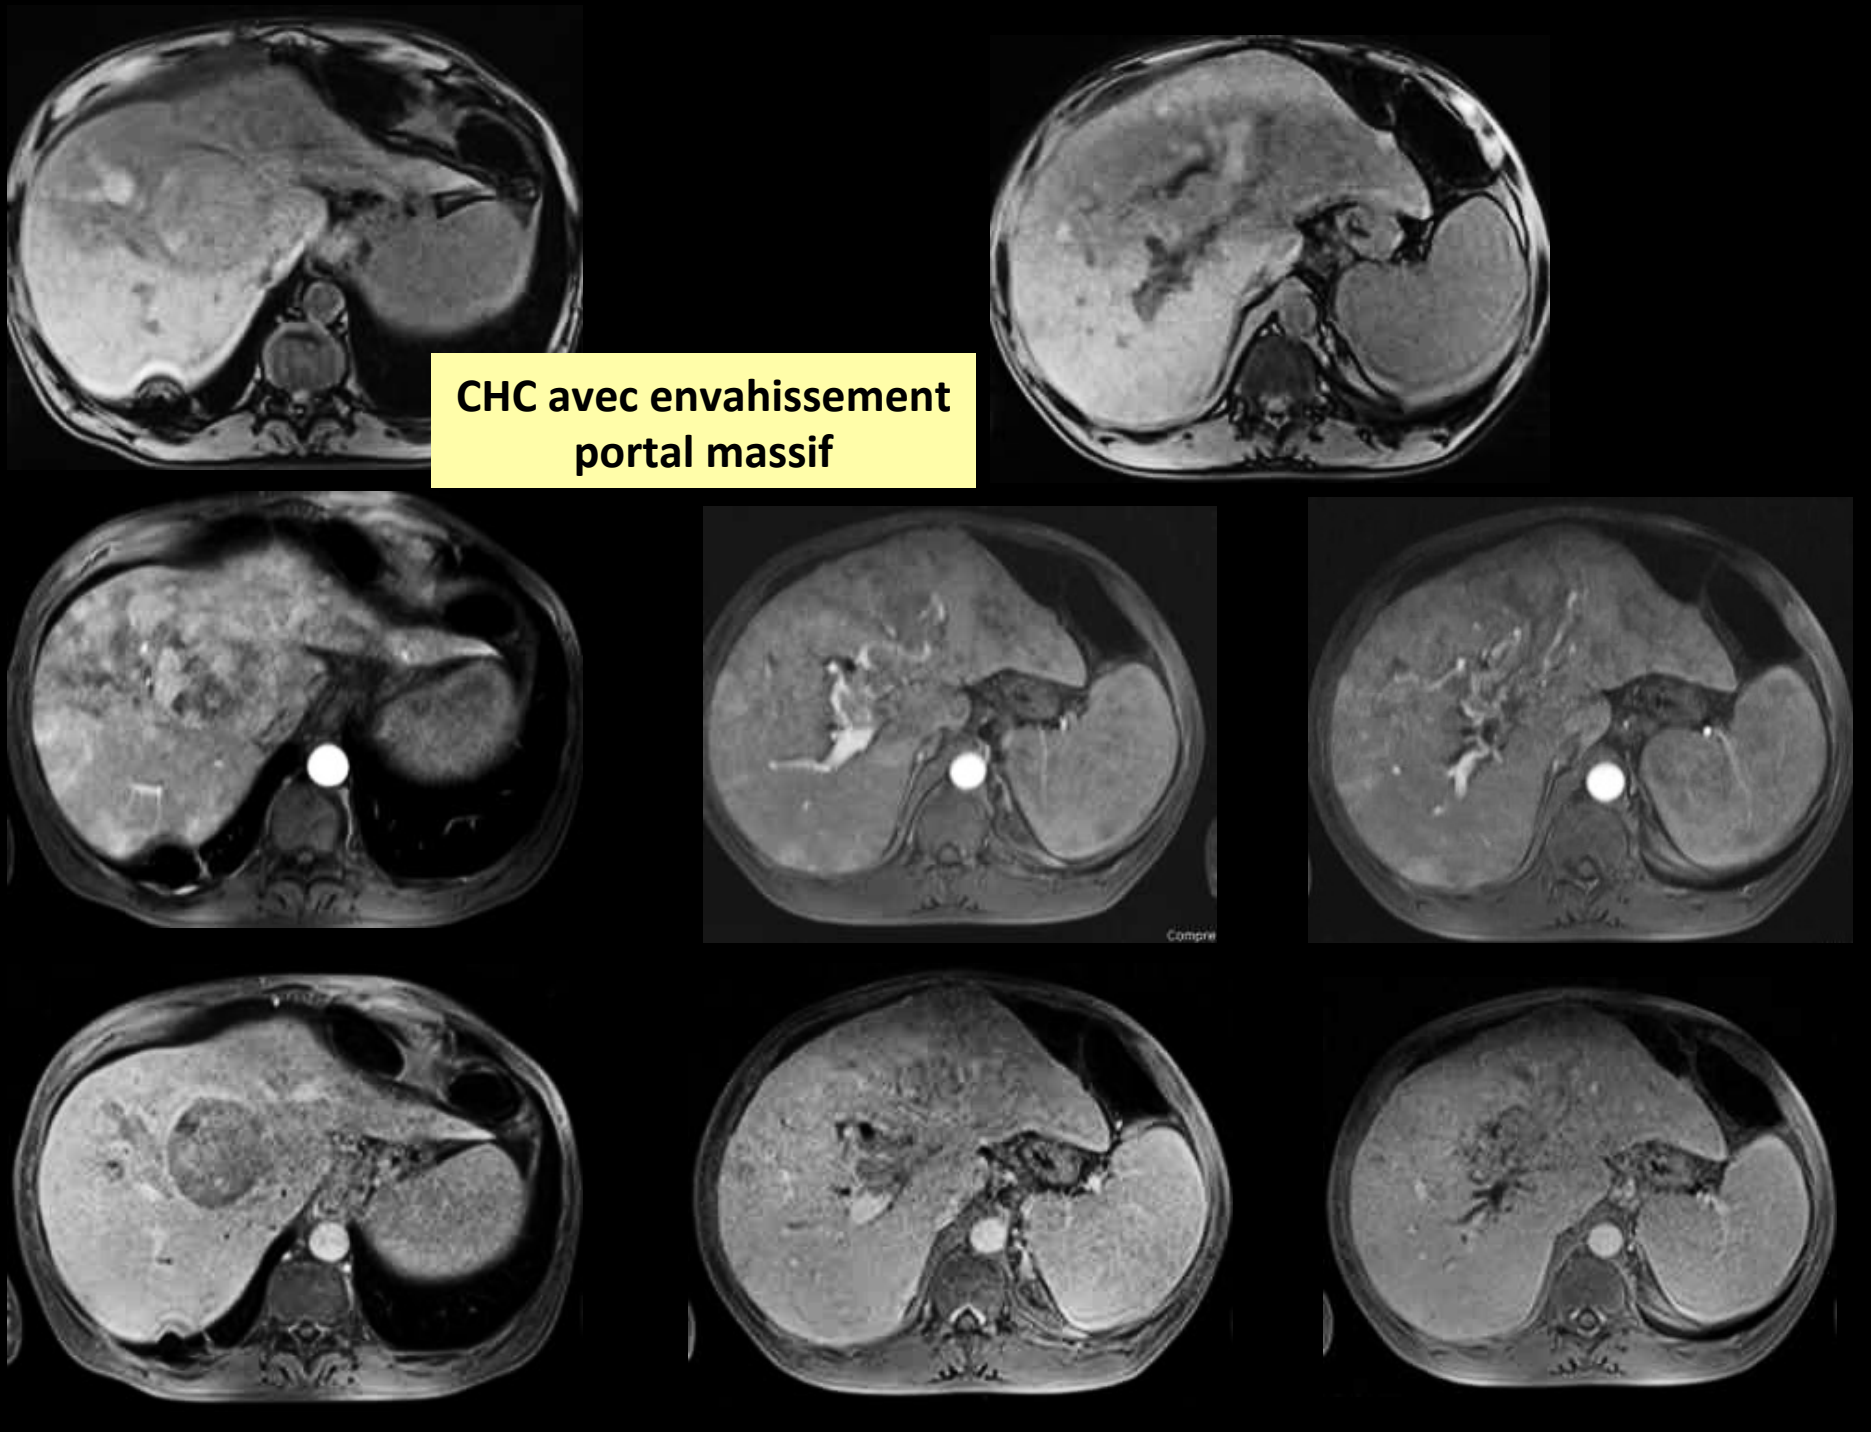






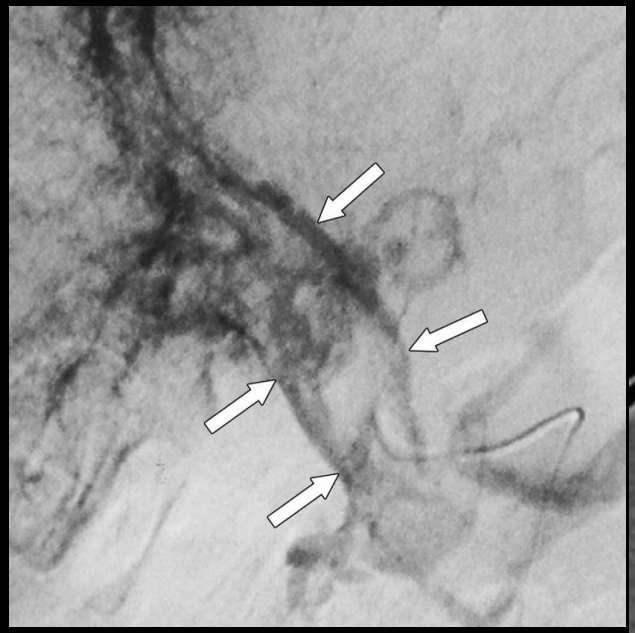


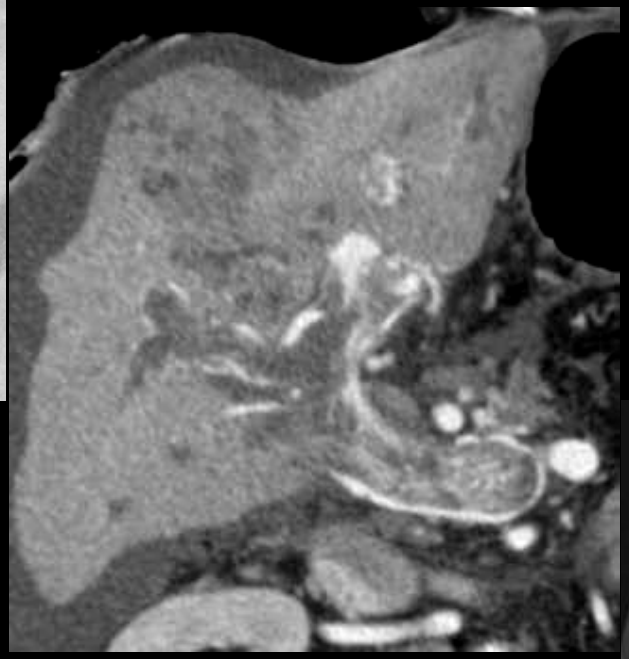


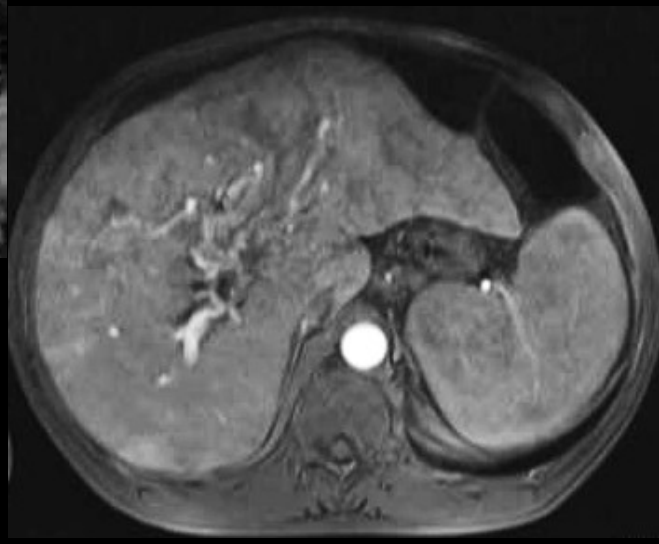


CHC avec envahissement portal massif

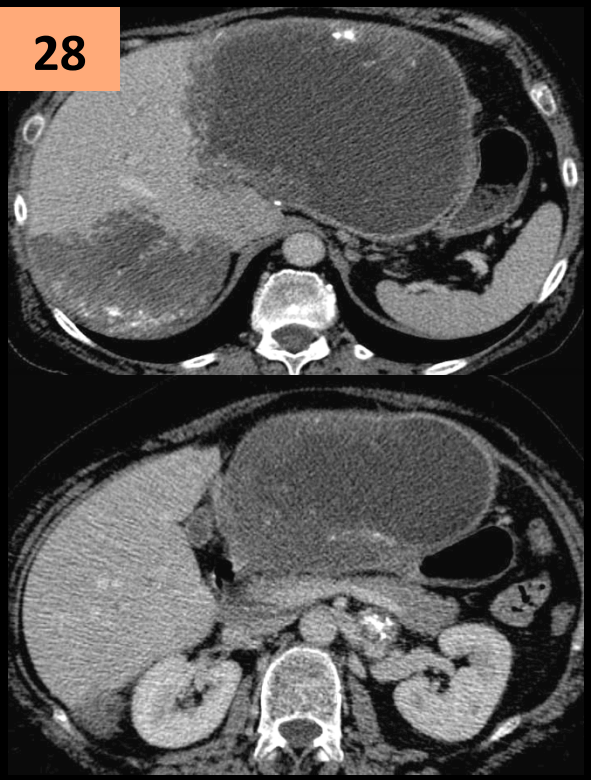
« Thread and streak sign » ou signe d' Okuda

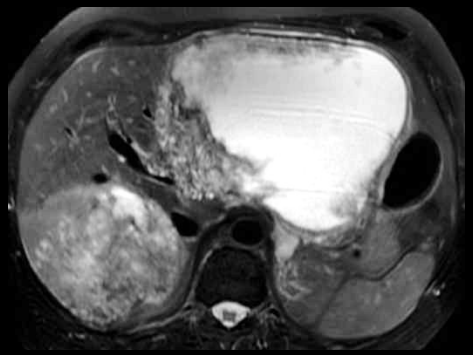


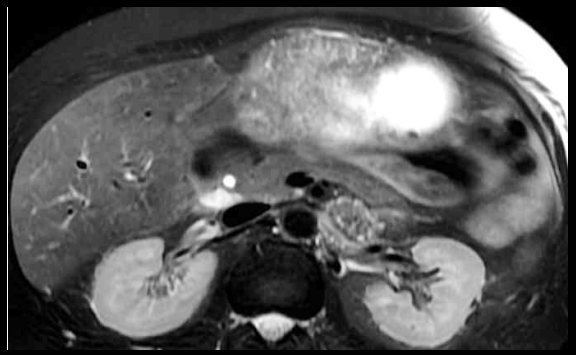


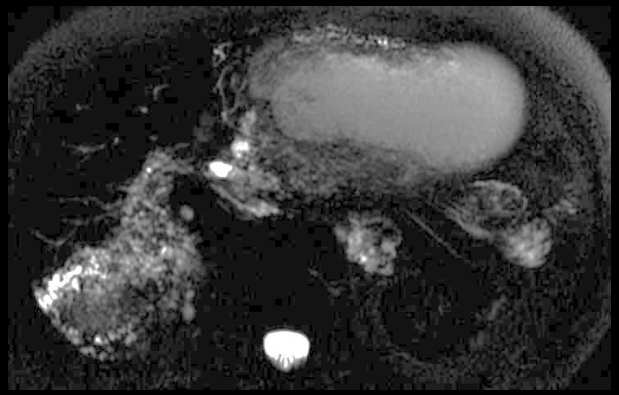


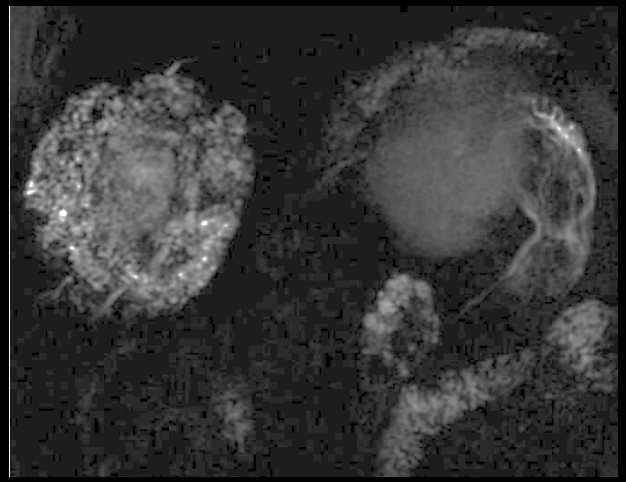
28

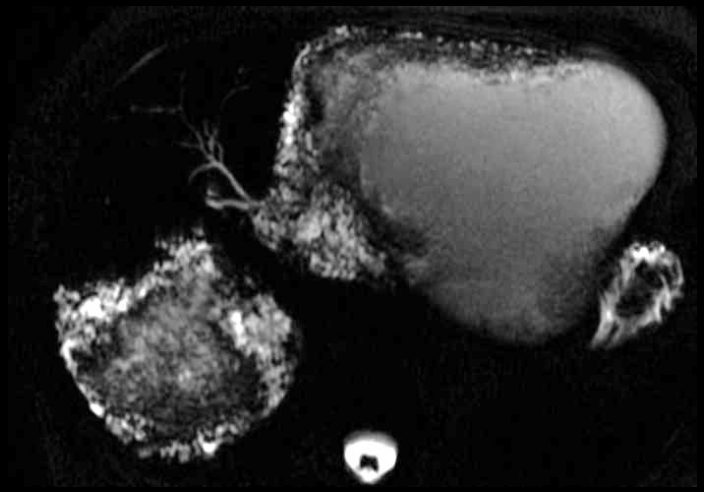








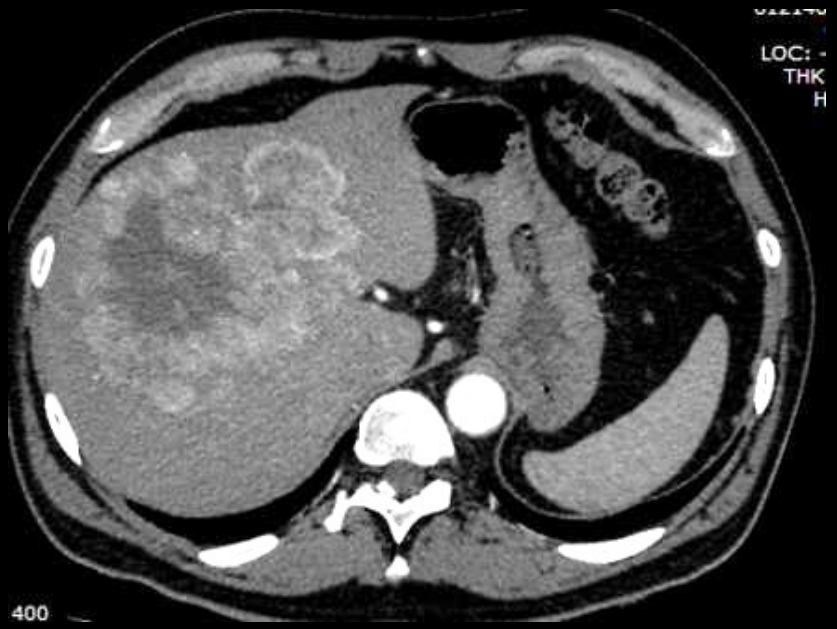


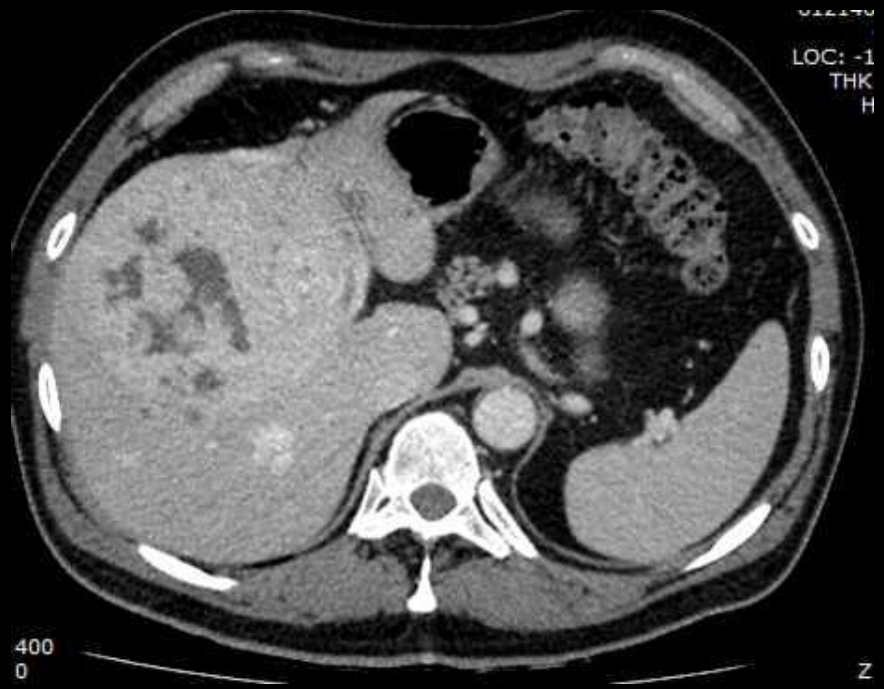


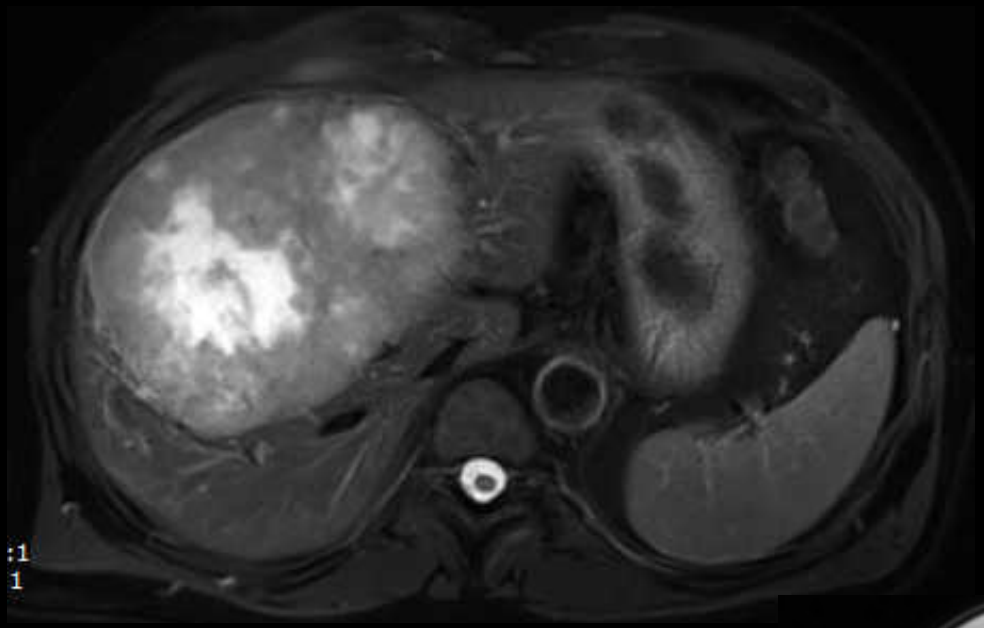
Échinococcose alvéolaire, double localisation hépatique et rétro péritonéale

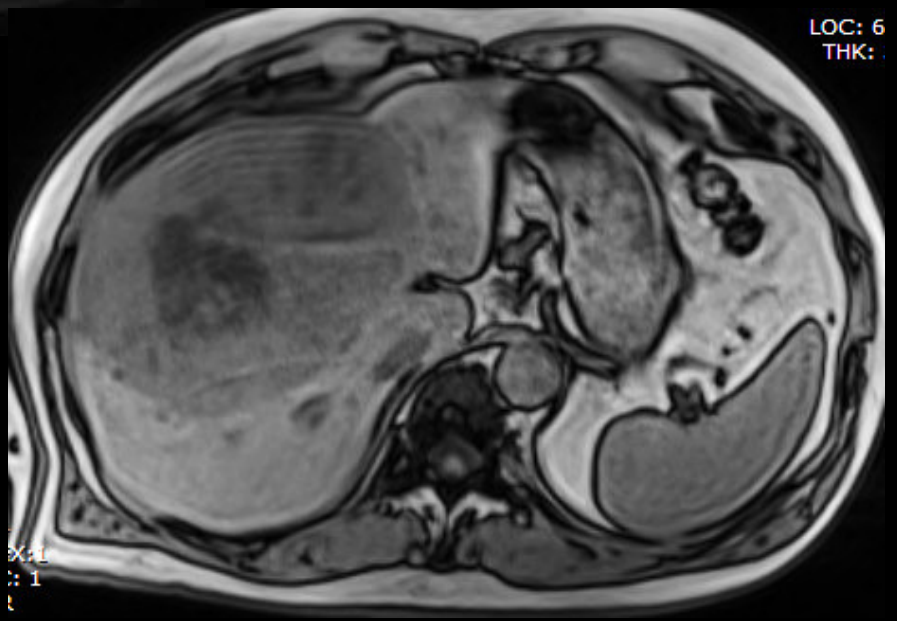
29

Homme de 55 ans. Perturbations modérées du bilan biologique hépatique. Aucun ATCD, non ethylique.



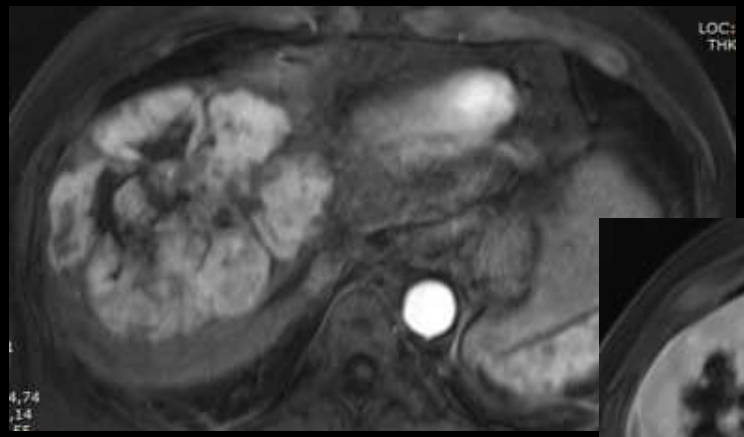


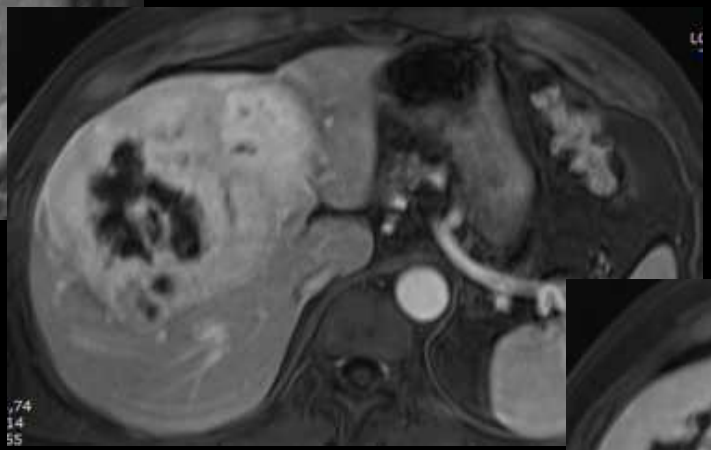


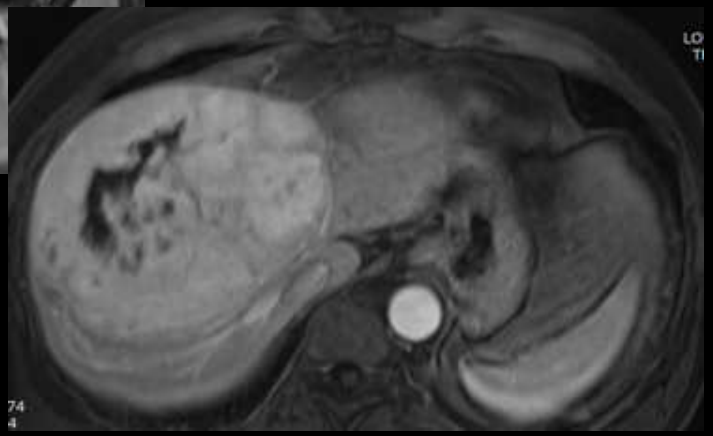


LOC: 6
THK:

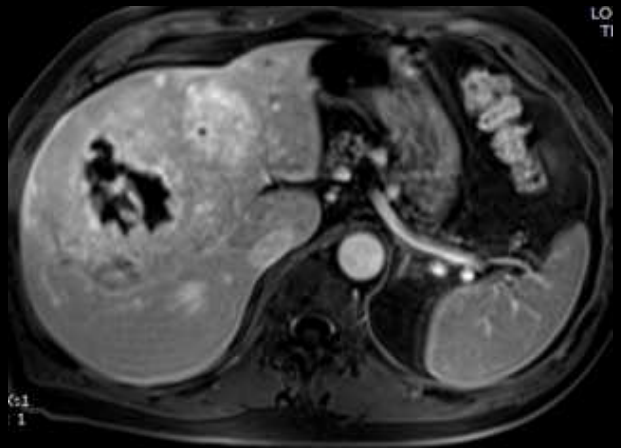
CHC atypique

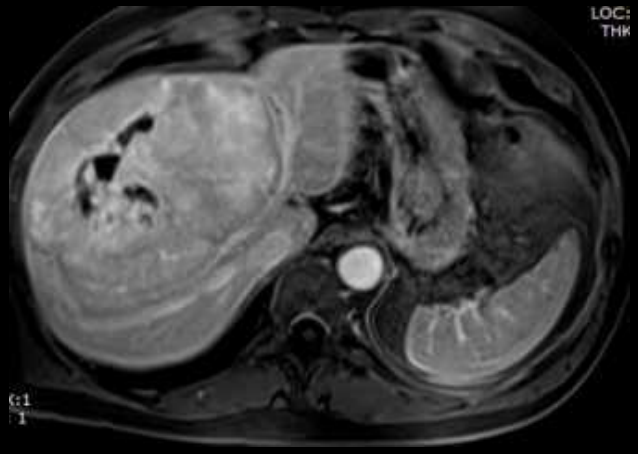




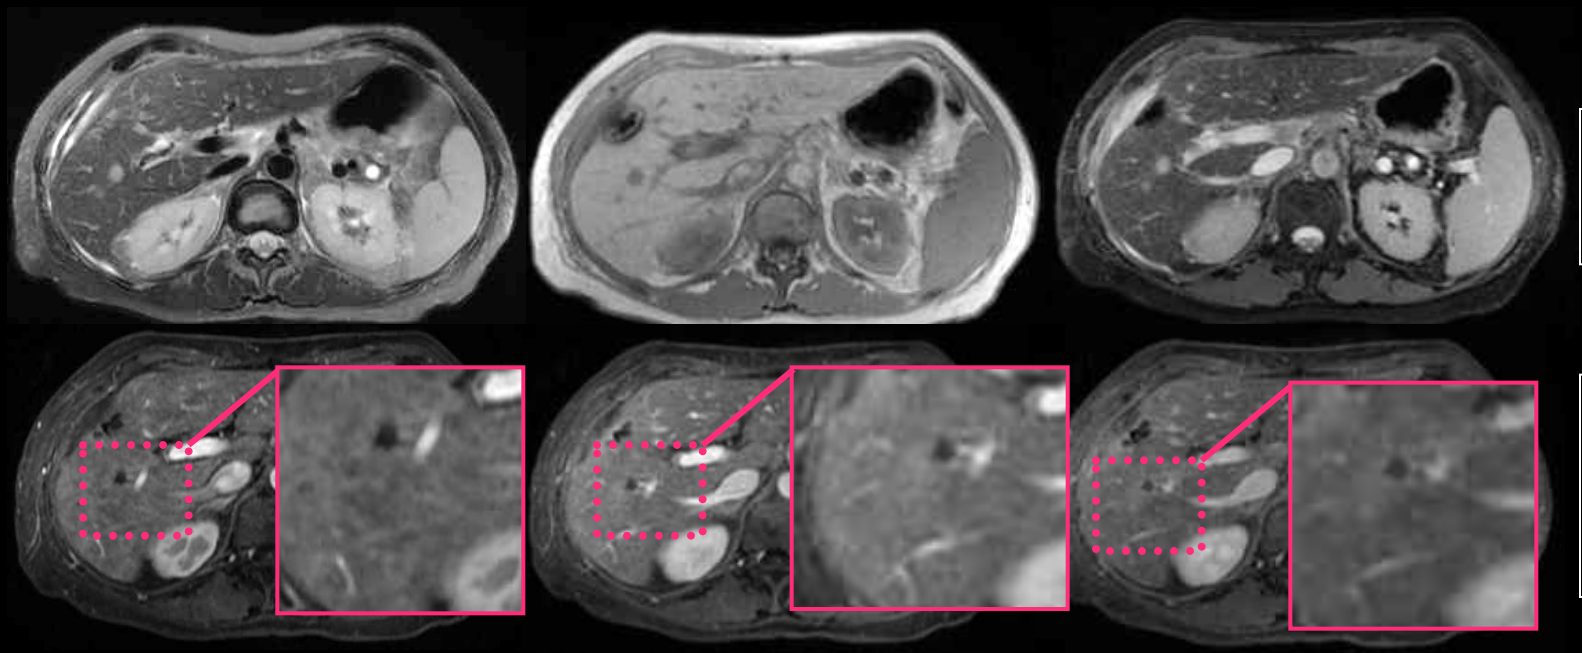


Quelle attitude proposez-vous ?





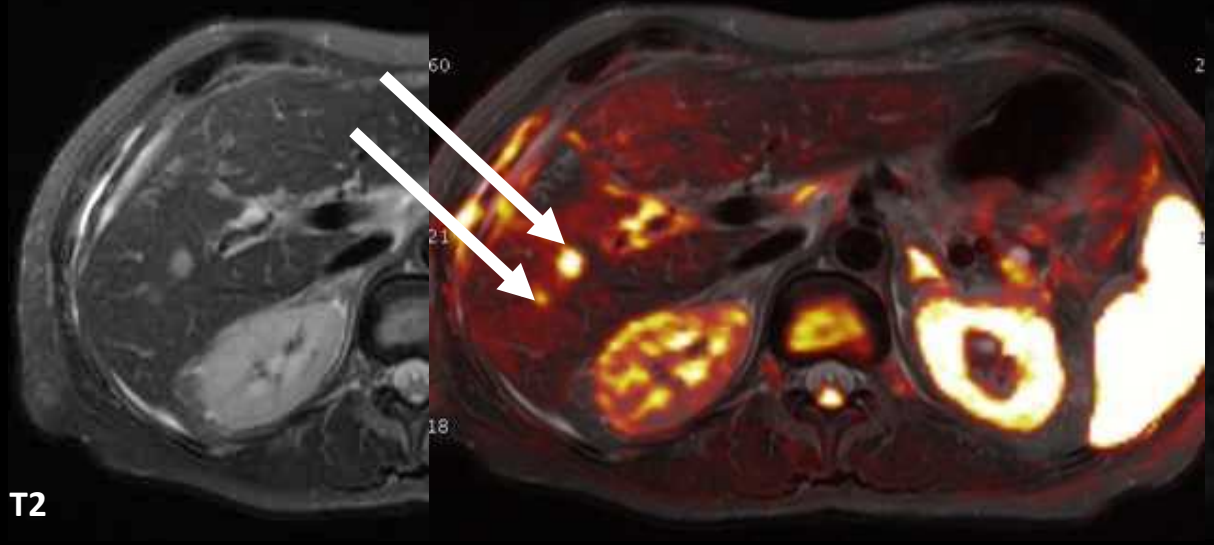
Surveillance d'un adénocarcinome pancréatique opéré en 2007



Séquences morphologiques (T2, T1, Fiesta)

Acquisitions dynamiques après Gado

(LAVA)



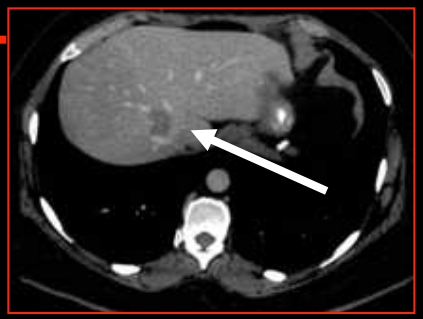
T2

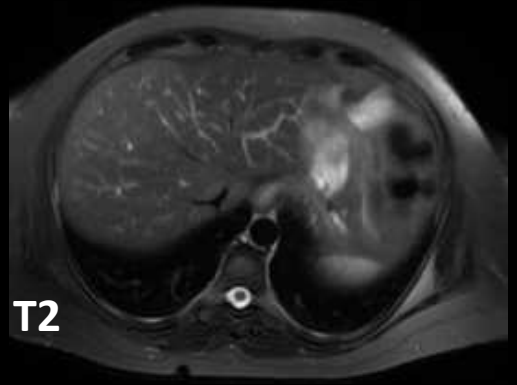
Diffusion

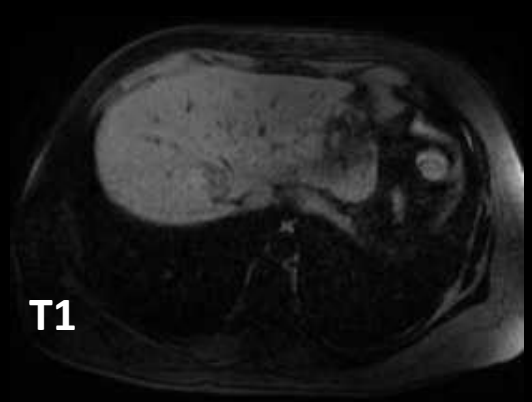
Il y a en fait 2 lésions contiguës du VI…

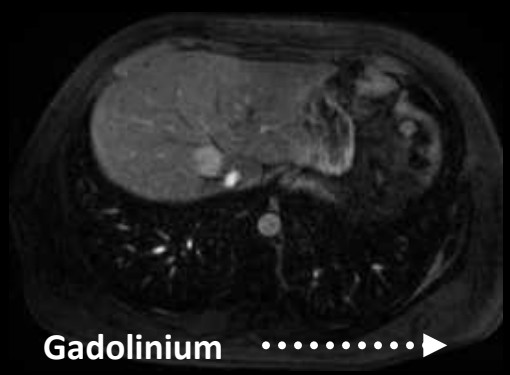
Comme le laissait supposer le T2; mais pas les séquences injectées !

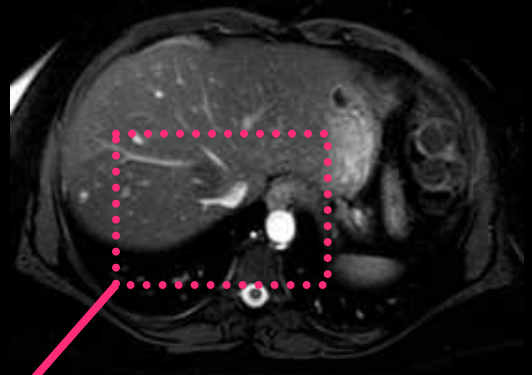
Altération de l'état général, bilan systématique

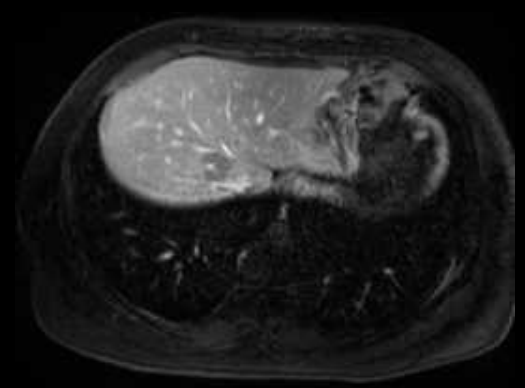


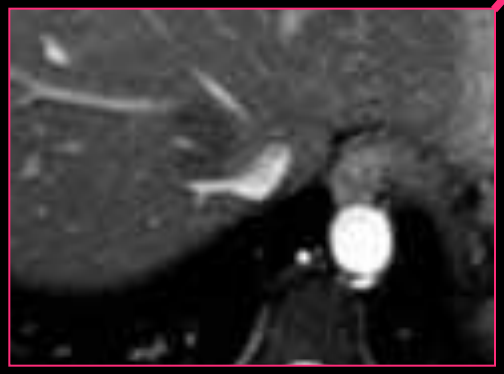




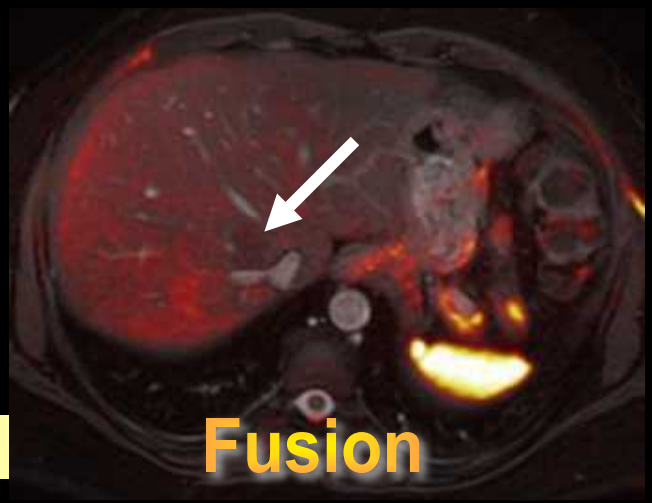








Diffusion



Stéatose focale…Pas d'hypersignal en diffusion !
